# ANNUAL SURVEY of EDUCATION IN CANADA

Published by authority of the Hon. J. A. Robb, M.P., Acting Minister of Trade and Commerce

PRINTER TO THE KING MOST EXCELLENT MAJESTY

## COMMINION OF CAMADA

## DOMINION BUREAU OF STATISTICS

## PREFACE

Some of the features of the school year covered by this number of the Annual Survey of Education in Canada are discussed in detail on page xii. They are: (1) the continued rapid improvement in the indications of regularity of attendance at school; (2) certain recent developments in dealing with small rural schools and school populations in isolated or undeveloped rural communities; (3) continued indications of increase in the proportions going on to high school work; (4) continued indications of increasing popularity of language high school subjects, generally at the expense of scientific and technical subjects, higher education, at the same time, showing what may be a somewhat analogous tendency; (5) a rapid increase in short (including summer school) courses in universities and colleges, indicating that higher institutions are being more and more used by persons already settled down to definite callings. On page xlvii is shown an estimate of the number of adults and older juveniles attending educational institutions; on page 2 is shown the approximate number of persons in secondary and higher grades by provinces. To the features mentioned might be added certain indications of marking time in school enrolment and educational expenditure.

Probably the most valuable and instructive Table in the report is Table 13 on page 24 showing the standing at school by ages of 1,364,000 pupils, their comparative standing in rural and urban schools being shown on page 28, and by sex on page 39. One of the striking points in connection with the table on page 24 is that out of 249,781 pupils in eight provinces attending school (not counting technical schools) between the ages of 14 and 17 years inclusive, 145,899 or nearly 60 p.c. are in elementary grades. The 14th birthday is usually the upper limit of compulsory attendance, although this limit has been increased to 15 in some provinces and to 16 in cities and towns in many places.

The report is in two parts, with introductory notes by way of a glossary of terms and a summary of certain regulations in different provinces. Part I consists of a review of educational activities during the year in each province; a summary of activities for the whole Dominion and of higher institutions, private schools and national movements. To this is appended a summary of educational legislation during the year. Part II consists of statistical tables in fourteen sections. The first four sections show the activities in regular publicly controlled schools; the fifth deals with secondary education; sections Six to Eight deal with special educational organizations including consolidation, special classes and institutions, school hygiene and technical education; sections Nine and Ten with teachers; section Eleven with the cost of school support; section Twelve with higher education, section Thirteen with private schools; and section Fourteen with Indian schools.

The report has been prepared under the direction of Mr. M. C. Maclean, M.A., Chief of the Education Statistics Branch of the Bureau. The Branch was established in 1919, and its operations were defined and outlined at a conference of the Bureau and the representatives of the Provincial Departments of Education. Under the arrangements since worked out, the records of publicly controlled education in the several provinces have been reduced to a large degree of comparability and homogeneity, the Bureau now making certain compilations for several of the provinces and conferring with each province as to the data herein presented. The thanks of the Bureau are hereby tendered for the cordial co-operation of the provinces in this connection. The sections of the report on private schools, business colleges, higher education, and miscellaneous educational activities not under provincial control—also a report on the cognate subject of libraries separately issued—are prepared in the Bureau independently.

R. H. COATS,

Dominion Statistician.

Dominion Bureau of Statistics, Ottawa, December 1, 1925.

## TABLE OF CONTENTS

## INTRODUCTORY NOTES—DEFINITION OF TERMS AND SUMMARY OF EDUCATIONAL REGULATIONS

### Definition of Terms

- Academy.—In Nova Scotia, a pure high school free to all qualified pupils in the county where situated, for which a special Annual ("Academic") grant is payable. In other provinces, academy generally means a private institution such as a boys' or girls' college, etc.
- Affiliated College.—An institution doing work of university grade, and in the case of the professional colleges, work leading to a professional degree; the degrees of an affiliated college are conferred by the university to which it is affiliated. In most Canadian affiliated colleges (not professional colleges), work below university grade is also done; that is, the college often carries on the preparation of pupils from the high school entrance year through the high school grades and matriculation work up to the completion of undergraduate work and a degree in Arts or in some other faculty. Commercial work also is sometimes done in these colleges.
- Annexed College.—In Quebec, a college is said to be annexed when the university merely approves the curriculum and by-laws, is represented at the examinations, and sanctions the diplomas awarded by these colleges.
- Associated College.—In Quebec, an associated college is an affiliated college situated outside the province.
- Assisted Schools.—In British Columbia, a school of which the teachers' salary is paid entirely by the Government.
- Business College.—In Canada the term is generally applied to a private institution teaching any or all forms of commercial work with the literary preparation for that work. These institutions generally confer their own diplomas, while also preparing students for public examinations such as those for the Civil Service, and chartered accountants.
- City School Superintendent.—An experienced teacher appointed by the school board of a city to take charge of all schools under that board and to act as an expert adviser to the board; he bears the same relation to all the schools that the principal bears to one school.
- Classroom.—In New Brunswick, a small room attached to the school room to which pupils are withdrawn from time to time to be drilled by the class room assistant: in other provinces, a school room in which the classes are taught.
- Classical College.—In Quebec this is classed as a secondary institution, but corresponds fairly closely to the affiliated colleges already described. It is not under the control of the Department of Public Instruction.
- Collegiate Department.—In Manitoba, a school in a town which has three teachers teaching high school work only, in contradistinction to "high school", which has only two such teachers. This "Department" is housed in the same building and under the same principal as the elementary classes. The latter fact distinguishes it from Collegiate Institutes, where only high school and technical classes are housed.
- Collegiate Institute.—In Ontario, Manitoba and Saskatchewan, a pure high school (sometimes technical school) which has attained to a certain standard in equipment and staff; in other provinces, a "college."
- Commissioners, Board of.—In Quebec, where the school legislative unit is the municipality instead of the district or section, the regular school board is called the Board of Commissioners, while the dissentient board (in other provinces called the "Separate School Board") whether Roman Catholic or Protestant is called the board of trustees.
- Commissioners, District.—The educational unit which is called "school district" in all other provinces except Quebec and Ontario is in Nova Scotia called a school section. All these sections are included in 33 "districts" under district commissioners, whose powers now are mainly confined to altering the boundaries of school sections. The inspector is ex officio the secretary of the district commissioners.
- Commissioners, School.—In Nova Scotia, the name given to members of school boards in incorporated towns.
- Consolidation.—An amalgamation of two or more rural schools or of rural schools with village or town schools, either for the purpose of uniting to strengthen the means of school support, where the original schools were small or poor, or for the purpose of providing a graded school and other advantages such as conveyance, instead of the original one-room school. In some cases (as in Saskatchewan) it need not be an amalgamation. The original district may be a "large district" with a graded school and provisions for conveyance, etc.
- Day Schools, Public Controlled, Ordinary or General.—A term used in this report (the word "general" school is used in Nova Scotia reports) to define all day schools doing the work of the ordinary school grades (kindergarten and grades I to XII) and under the control of the Department of Education, in contradistinction to publicily controlled technical, special and night schools, on the one hand, and private schools on the other; it includes all the publicly controlled primary schools in Quebec and "public", "separate" and "secondary" schools in Ontario, Saskatchewan and other provinces where the terms are used.

#### DEFINITION OF TERMS-Continued

District school.—.In all provinces except Nova Scotia, Quebec and Ontario, the smallest legislative school unit locally governed by a board of school trustees (called "section" in Nova Scotia and Ontario); in Nova Scotia, see District Commissioners above; in Ontario it refers to a high school district; in Quebec it is a subdivision of the school municipality.

District, municipal,—See Commissioners, district.

District, minor.—Formerly used in Prince Edward Island to define a school district of which the school enrolment and average attendance fell short of the minimum requirements.

District poor.—In New Brunswick, a school district needing a special government grant for its support.

Division, Inspectorial.—In Nova Scotia, used for "inspectorate."

Division, School.—In British Columbia, a department or classroom in a school.

Elementary grades.—In Quebec, the first six "years" in the case of Roman Catholic, and seven "years" in the case of Protestant, primary schools; in all other provinces, the grades up to and including Grade VIII, except in the case of Junior High Schools, where Grades VII and VIII are considered Junior High School grades.

Elementary School.—A school equipped and staffed to teach the work of elementary grades.

First Class School.—Formerly in Prince Edward Island, a graded school equipped and staffed to teach high school as well as elementary school grades, and maintaining a certain standard of efficiency.

General School.-See Day Schools, etc.

Grade, School.—The subdivisions of the work of ordinary day schools. The elementary "grades" being in most provinces Grades I to VIII and the secondary, Grades IX to XII.

Graded School.—A school with more than one class room or teacher.

Grammar School.—The High School which is free to all qualified pupils in the county is in New Brunswick called a Grammar School.

High School.—Generally a school with at least one teacher devoting most of his or her time to work above Grade VIII; a "pure" high school is an institution where no other work is done below Grade IX (or Grade VIII with high school subjects such as Algebra and Latin). From the point of view of organization and administration, not of function, "nigh school" has not the same significance in every province. See under "secondary education" in the reviews of each province. In Saskatchewan, a school organized for Secondary Education only, by a district coinciding with the municipal limits of a town or city.

Independent School.—In Quebec, a school not directly under the control of the Department of Public Instruction. The primary Independent Schools like the publicly controlled schools are class fied as primary elementary and primary complementary.

Inspector.—In all provinces except Ontario, an officer appointed by the Provincial Government to inspect schools in a defined area; in Ontario the county or city inspectors are appointed from among persons holding inspectors' certificates; the county inspectors are paid two-fifths of their salary by the councils, the other three-fifths by the Government; the cities receive a grant of six dollars per teacher for Inspection purposes. The inspectors in unorganized areas, also secondary school and chief inspectors, are appointed and paid by the province; in Quebec, inspectors are appointed and paid by the Department of Public Instruction.

Intermediate School.—In Manitoba, a graded school with one teacher employed for high school work, in Quebec, Protestant schools in which the first nine grades are taught.

Kindergarten Primary. - In Ontario, a school or room, combining the work of the kindergarten and of Grade I.

Official Trustee.—A trustee specially appointed to deal with unusual problems in a school district or section, or to take the place of the regular board where the latter refuses or fails to carry out the provisions of the Education Act.

Primary School.—In Quebec, the name given to the ordinary day schools under the Department of Public Instruction (also to certain independent schools); it is used in contradistinction to Cathoric secondary schools, special schools and superior schools (schools of university grade) but the secondary schools mentioned have not the same significance here as in other provinces since they usually teach a full course in Arts in addition to the high school work preparatory to this course, but do not provide non-professional high school training for teachers for primary schools, which training is given either in the primary schools themselves or in the Normal Schools. Primary schools therefore, correspond in many respects to the elementary and high schools of other provinces. In Prince Ed. Island primary school means a one-room school.

Primary Complementary.—In Quebec, a two-year course, either in commerce, agriculture, industry, or, for girls, domestic economy. These are also called primary vocational schools.

## DEFINITION OF TERMS-Continued

- Public Schools.—In Ontario, elementary publicly controlled schools, as distinguished from elementary denominational schools.
- Rural Municipal Schools.—In British Columbia, each municipality (rural and urban) is a school district and the schools in every municipality are under the control of one Board of Trustees.
- Secondary Grades.—School grades in advance of grade VIII, usually grades IX to XII.
- Secondary Schools.—In most provinces, schools organized to teach work of secondary grades (IX to XII); in Quebec Roman Catholic education, the term is confined to such institutions as the Classical colleges and non-subsidized independent classical schools. Their work may extend to include a full course in Arts, the degree being conferred by the university to which they are affiliated.
- Section School.—A term used in Nova Scotia and Ontario to indicate the unit corporation for school self government.
- Section, Poor.—A term used in Nova Scotia to indicate that the "School Section" requires some extra aid from Government or Municipality in order to support school.
- Separate Schools.—Used in Ontario, Saskatchewan and Alberta to describe denominational (sometimes coloured) dissentient schools under public control; in Quebec, they are called trustee schools as distinguished from commissioner or majority schools, the latter being either Roman Catholic or Protestant according as either forms the majority in the community.
- School.—In Nova Scotia, New Brunswick and Saskatchewan, a school room in charge of a teacher; in other provinces the whole school institution (house and grounds).
- Special Schools.—Schools under university grade other than the general schools, such as night schools, technical schools, schools for the blind, etc.
- Superior School.—In Quebec the Protestant intermediate and high schools are classified as superior; in New Brunswick, a school equipped and staffed to teach high school work and free to all children in grade VII and upwards in the parish or parishes in which the school is located; in British Columbia, a school equipped and staffed to teach the upper elementary and two high school grades.
- Technical School.—A school equipped and staffed to teach vocational work, or prevocational work such as manual training.

### Ages of Free Admission into Schools

- (1) Prince Edward Island.—Resident children from the 6th to the 16th year of their age; older children if there is accommodation.
- (2) Nova Scotia.—Trustees must provide accommodation for all residents over 5 years of age who wish to attend.
- (3) New Brunswick.—Trustees must provide accommodation for residents between 6 and 20; others may attend if there is accommodation.
- (4) Quebec.—Usually 7 to 16 in primary schools. A fee is charged in all cases except where abolished by the municipality and children 7 to 14 have to pay this fee whether they attend school or not.
- (5) Ontario.—The public schools are free to all residents (except separate school supporters) between the ages of 5 and 21; the separate schools are free to separate school supporters.
- (6) Manitoba.—Accommodation must be provided for all residents between the ages of 5 and 21 in rural communities, and 6 and 21 in urban.
- (7) Saskatchewan.—In rural and village districts, between 5 and 21; in towns and cities, between 6 and 21. In order to equalize educational costs in Saskatchewan boards of trustees are allowed to charge certain fees when the residents are not taxpayers of the district, and in certain other cases where it is considered that the revenue derived does not provide for the service rendered.
  - (8) Alberta.—Children are admitted to Alberta schools as soon as they have attained the age of six.
  - (9) British Columbia.—Accommodation must be provided between the ages of 6 and 16 years.

## Ages of Compu sory Attendance

- (1) Prince Edward Island.—Ages 7 to 13, inclusive; monthly attendance must be sixty per cent of the days schools are in operation.
- (2) Nova Scotia.—Children of ages from 7 to 14 in rural schools; and 6 to 16 in towns and cities. Within the age limits, children in town and country schools must attend regularly; must be reported for discipline when 5 days absent; and parents and guardians in addition to fines may have 2 cents a day added to their taxes for each absence to compensate the section for the loss of the "attendance" portion of the Municipal school fund.
- (3) New Brunswick.—In districts other than cities and towns under section 105 of the Schools Acts, (on resolution of trustees, but the question must be brought up at every annual meeting until adopted).—age 7 to 12 for a period of 80 days; in cities and incorporated towns under same section, in which the compulsory act has been adopted by city or town council, ages 6 to 16 or grade VII standing if over 12 years old, period 120 days; in St. John, Fredericton, Chatham and Newcastle, 6 to 14. Employment of children under 16 may br forbidden by board.
  - (4) Quebec .- No. statutory laws for compulsory attendance.
  - (5) Ontario.-
- (a) Children 8 to 14 must attend full time; children from 5 to 8, if enrolled must attend full time to the end of the school term for which they are enrolled.

### DEFINITION OF TERMS—Concluded

- (b) Adolescents 14 to 16 who have not attained a university matriculation standing must attend full time; those exempted on the pleas of circumstances compelling them to go to work must attend part time for 400 hours a year in municipalities where part-time courses are provided. This provision came into force in September, 1921. In Septemper, 1922, urban municipalities with a population of 5,000 and over were to be required to provided part-time courses.
- (c) Adolescents 16 to 18 who did not attend full time to sixteen and have not attained a university matriculation standing must attend 320 hours a year. This provision was to come into effect in September, 1923, but the date has been postponed to September, 1925.

Manitoba.—Children of ages 7 to 14 must attend full time. Any pupil over 14 if enrolled must attend regularly. A child over 12 may be exempted for employment, but only six weeks in the term. Employment under 14 (except as mentioned) is forbidden. Children of ages 14 to 16 must attend school regularly if not engaged in some regular occupation.

Saskatchewan.—All children 7 to 15 who have not passed grade VIII standing subject to certain conditions as to distance from school, etc., must attend full time. Employment of unexempted children under 15 forbidden. Deaf mutes between the ages of 8 and 15 must attend an institution seven months in each year.

Alberta.-All children 7 to 15 must attend full time.

British Columbia.—Children of ages from 7 to 15 must attend full time during the school year.

#### School Year and Vacations

Prince Edward Island.—July 1 to June 30; for financial purposes in Charlottetown and Summerside, calendar year. In Charlottetown and Summerside there are vacations of nine weeks in summer and one week in December; elsewhere there is a summer vacation of six weeks beginning July, a fall vacation of two weeks in October, and a winter vacation of one week in December; or, at the option of the District, there may be three weeks in May, three weeks in October and one week in either July or December, but schools of two or more departments may have a summer vacations of eight weeks and one week in December.

Nova Scotia.—August 1 to July 31. There is a summer vacation of about eight weeks in July and August (but, with the consent of the inspector, trustees may fix these for January and February) and two weeks beginning Saturday before Christmas.

New Brunswick.—July 1 to June 30 with a summer vacation of 8 weeks commencing July 1, and a winter vacation of two weeks commencing on the Saturday before Christmas.

Quebec.—July 1 to June 30. The Roman Catholic Committee regulations require schools closed each year, from the 1st of July to the first Monday in September; the Protestant Committee regulations, from the 1st of July to the 15th of August, but in practice schools may open in September.

Ontario.—In public and separate schools the school year consists of two terms: September 1 to December 22 and January 3 to June 29; in secondary schools the school year is the same except that schools open on the first Tuesday in September. In addition to the interval between these terms there is a vacation of one week following Easter. Statistics of the public and separate schools which are shown in this report, however, are for the two terms which make up the calendar year; while those for secondary schools, normal schools, technical schools, etc., are given for the year beginning in September.

Manitoba.—July 1 to June 30 with the following vacations:—

- (a) Easter—the full week begining with Easter Sunday.
- (b) Midsummer—from the first day of July to the third Monday in August, both days inclusive, or by a special resolution of the board, to the first day of September.
- (c) Christmas, from the twenty-fourth day of December to the second day of January, both days inclusive.

Saskatchewan.—For finances, calendar year; for statistics, July 1 to June 30. (Up to 1920, however, statistics have been given for the calendar year).

The vacations are as follows:—

In rural and village districts at least seven weeks in the year, of which one to six weeks must be in summer. The summer vacation comes between July 1 and October 1, and the winter between December 23 and February 15. In towns and cities at least seven weeks, six weeks commencing July 2, and nine days commencing December 23. In schools open throughout the year, the week beginning with Easter Day is a vacation, in city, town or village districts an additional holiday of two weeks may be granted.

Alberta.—(1) For finances, calendar year. (2) For statistics, academic year, that is, from July 1 to June 30. (Up to the year 1920, however, statistics have been given for the calendar year).

The vacations are: in rural districts, seven to ten weeks; summer between June 15 and September 1; December 24 to January 2. In towns and cities, eight to twelve weeks.

British Columbia.—July 1 to June 30. The vacations are: summer, last Friday in June up to the Tuesday immediately following Labour Day; winter, two weeks preceding first Monday in January; Easter, four days following Easter Monday.

# PART 1.—REVIEW OF EDUCATIONAL ACTIVITIES IN CANADA DURING THE YEAR 1924.

## CHAPTER I.—SUMMARY FOR DOMINION

## (1) SCHOOL ACCOMMODATION AND PERSONNEL

The enrolment in Canadian educational institutions is now over 2,200,000 exclusive of the majority of private correspondence schools, a few trade schools and the Frontier College for which definite figures have not been obtained to date. The last mentioned alone has a registration of about 5,000 while that of private correspondence schools would probably raise the enrolment in Canada within sight of the two million and a quarter mark. The 2,200,000 consist of 1,958,704 in publicly controlled maternal elementary and secondary schools (exclusive of vocational secondary schools); 87,870 in vocational schools and night schools, exclusive of short courses in Universities and Colleges; 10,917 in teacher-training institutes; 13,872 in Indian schools supported partly by religious denominations and partly by the Dominion Government; 1,719 in schools for deaf and blind; 18,322 in private business colleges; 67,534 in private elementary and secondary schools, including 52,325 in schools partly subsidized but not controlled by the Government; 4,467 in preparatory courses at universities and colleges; 10,768 in short special and correspondence courses at universities and colleges; 9,812 in classical colleges of whom about 2,000 are regular arts students; 6,873 in regular courses at universities.

According to a close estimate 1,865,911 are in elementary grades (not elementary schools) embracing kindergarten and what in nearly all the provinces consists of the first eight grades of ordinary school work; 274,642 are in secondary or higher grades of whom about 30,000 are in regular courses (i.e. in regular degree courses) at universities and colleges. The numbers thus classified by grade of work do not include 66,246 in night schools and schools for the blind and deaf, the standard of whose work would perhaps be impossible to estimate in terms of school

grade.

The enrolment cannot be given exactly in terms of ages since the ages only of those enrolled in publicly controlled and private elementary and secondary schools are known. According to the census of 1921 out of a total of 1,700,047 given as at school between the ages of 5 and 24 years<sup>1</sup>, 129,747 were over the age of 16 years. The same proportion of the total enrolment of 1923-24 is about 160,000. Since the tendency to attend secondary schools, colleges, etc. and hence to raise the age at school has been increasing since 1921 it is clear both from this fact and from the figures of post elementary grades that 160,000 is a low estimate of the number of adults and older juveniles attending day school in 1923-24 (exclusive of private correspondance schools).

The enrolment in publicly controlled elementary and secondary schools consists of about an equal number of each sex. In the private schools and business colleges and in teacher-training institutes the female sex predominates. This is also emphatically true of public high schools and high school grades in continuation schools. On the other hand the male predominates in higher institutions, so that on the aggregate of educational institutions the sexes are not far

from being equal.

The accommodation for publicly controlled elementary and secondary school pupils consists of about 54,000 class rooms in 28,000 school districts. The number of class rooms gives perhaps a more correct idea of the accommodation than the number of teachers since the latter number is inflated by teachers who change positions during the year. The average number of pupils to a class room has not changed materially during the last four years being about 37. The older provinces, however, show a slight decrease in the number per class room which is due in part at least to increase in the number of class rooms. As mentioned in previous reports the average of 37 to a class room gives but a very rough conception of the accommodation owing to a large number of very small schools in new or depopulated rural centres; also owing to the tendency to have classes accommodating the younger children larger than those accommodating the more advanced pupils. In cities and towns, therefore, in the earlier elementary grades, it is strongly probable that on an average 40 to 50 children are taught in a class room.

The data on regularity of attendance are being gradually enlarged and improved and for certain provinces are quite full as may be seen in Table 8 of this report. The percentage of enrolment in average attendance is of very little significance owing partly to the fact that it does not take into consideration the time schools were open, but chiefly for the reason that an average in this connection is misleading. The average is weighted by a number who attend only a few days at the one end and by a number who attend full time at the other. The proportion who attend just the amount of time necessary to receive benefit from the year's work would seem to be the most desirable form of information and this information the percentage does not give. However, employed in the light of other information, and particularly

<sup>&</sup>lt;sup>1</sup>It would seem that the enrolments of evening and correspondence schools were not included in this total. See further page xlvii.

that given in Table 8, the percentage may be useful as a single index of progress in regularity. The classification of attendance in the census data divides those at school into three classes: (1) those who attend less than four months (about 80 days) during the year, (2) those who attend from four to six months and (3) those who attend seven months and more. Examination of Table 8 shows that there is a tendency to constancy in the case of those who attend less than four months, a marked decrease in those who attend from four to six months and a marked increase in those who attend seven months (140 days) or more. With the knowledge of this tendency it is fairly safe to conclude that the increase in the percentage of attendance measures roughly the increase in the proportion attending seven months or more, that is, the proportion likely to receive benefit from a year's work. Comparing the census of 1901, 1911 and 1921 in the case of pupils 5 to 19 years of age and the census of 1911 and 1921 in the case of children 7 to 14 years of age, the following figures are indicative of the tendency already mentioned.

| D. A. C. D. Marian Address disc.   | Po                  | pulation, 5-19        | Population, 7-14 yrs  |                       |                       |
|------------------------------------|---------------------|-----------------------|-----------------------|-----------------------|-----------------------|
| Percentage of Population Attending | 1901                | 1911                  | 1921                  | 1911                  | 1921                  |
| Less than 4 months                 | 2.97 $6.57$ $42.59$ | 1·97<br>6·07<br>44·84 | 2·62<br>4·83<br>53·87 | 2·10<br>8·17<br>69·51 | 2·48<br>6·41<br>79·70 |

The above figures are the percentages of the population at those ages at school during these periods. Taken from the point of view of those actually at school the percentages are as follows:—

| D                              | F                      | Pupils, 5-19 y         | Pupils, 7-14 yrs.     |                                                                           |                       |
|--------------------------------|------------------------|------------------------|-----------------------|---------------------------------------------------------------------------|-----------------------|
| Percentage of pupils attending | 1901                   | 1911                   | 1921                  | 1911                                                                      | 1921                  |
| Less than 4 months             | 5·69<br>12·60<br>81·17 | 3·78<br>11·49<br>84·73 | 4·27<br>7·88<br>87·85 | $ \begin{array}{c} 2 \cdot 64 \\ 10 \cdot 24 \\ 87 \cdot 12 \end{array} $ | 2·81<br>7·23<br>89·96 |

Since 1921 the "percentage of attendance" has increased from 68·0 in 1921 to 73·6 in 1923-24. Allowing for possible small changes in the interpretation of this percentage during these years it would seem that it has improved about 8 p.c. of what it was in 1921. The inference is quite strong that this improvement has taken place in the case of the proportion attending 7 months and at the expense of those attending 4 to 6 months. The less than four months groups have probably not been greatly affected. The improvement mentioned is probably more indicative of the progress made by school children than any other single factor—indeed than all other factors combined. It is consequently of the greatest importance.

## PROGRESS DURING THE YEAR

The enrolment in State controlled elementary and secondary schools, that is, in ordinary schools, showed an increase of about 31,000 or 1.6 p.c. over the enrolment of 1922-23. Three provinces showed a decrease. The number in average daily attendance in these schools increased by 29,444 or over 2 p.c. and one of the three provinces which showed a decrease in enrolment showed an increase in average attendance, while another had about the same in average attendance as last year. The effective school enrolment has, therefore, increased at a greater rate and more evenly as between provinces than the nominal enrolment. The enrolment in other educational institutions showed on the whole an increase over the previous year, but when considered province by province rather than on the aggregate for Canada this increase is not of a Vocational schools showed increases in most provinces but decreases in some. decided character. The most constant increase is shown by schools for teacher-training, a point which is rather significant and coheres with the fact that the proportion of high class teachers has increased and that of the lowest classes has decreased. The untrained teacher and the low class teacher are rapidly becoming features of the past. On the whole, private elementary and secondary schools show a decrease in enrolment while, private business colleges (especially when taken by individual institutions) show a slightly upward tendency. Preparatory courses at higher institutions have shown a decrease, regular courses have remained comparatively stationery while short, special and correspondence courses have shown a decided increase. The upward tendency of the last mentioned is more marked than that of any other item of enrolment.

The increase in accommodation to be judged fairly has to be measured from several points of view. An increase in the number of school districts might be expected to show that the school was reaching outward, that is, to unorganized settlements. This is quite true, but it does not show the full extent to which the school is thus reaching outward in this manner, since consolidation of schools and introduction of larger school districts instead of the three-trustee school

would have a tendency to reduce the number of districts. In this connection should be mentioned certain important tendencies as revealed in the legislations of the year. One is to discourage the keeping open of small rural schools where, or during a term when, the attendance has reached a certain minimum. The pupils of such schools are to be conveyed during the time the schools are closed to a neighbouring school, or their board is to be paid in a neighbouring district at the expense of their own district (See Manitoba legislation, page 1). Another feature is the institution of itinerant teachers for remote unorganized sections of the country. Another is the extension of training (under the direction of Departments of Education) in ordinary school subjects by correspondence to children in outlying districts. These most important movements have been initiated, the first in Nova Scotia and the second in British Columbia and Alberta.

An increase in the number of school houses might be expected to show a somewhat more advanced state of preparedness than the increase in the number of districts. An increase in the number of class rooms is a more definite indication of improvement in accommodation than either of the other two although it does not show the extension into new fields to the same extent as the increase in the number of districts. An increase in the number of teachers with the class of certificate and experience represented in this increase ought to be the best indication of all, but unfortunately the exact increase in the teaching staff will for a long time yet be obscured by the fact that a certain number of teachers teach only a part of the year and are replaced by others so that both are included in the total staff for the year. The increase in higher class teachers and decrease in lower have already been mentioned. A decided increase in the number of male teachers is also shown. The number of class rooms in operation in ordinary schools, on which it is necessary to fall back for an indication of improvement in accommodation, increased by 1,300 while the corresponding enrolment increased by about 30,000. It would seem; therefore, that the increase in accommodation provided for very little more than the increase in enrolment and that there is no evidence that congestion was relieved to any extent. The expenditure was on the aggregate greater than in the previous year but showed a considerable decrease in several provinces. This is true of expenditure by governments as well as of expenditure directly by ratepayers. The expenditure on teachers' salaries showed a decrease. There is no space here to analyse the effects of this on the teaching staff from the point of view of class of certificate, experience, etc., but the figures shown in section 11 (on expenditure in education) of the present survey may be compared together with the figures of section 9 on teachers' certificate salaries, etc. It is necessary to ascertain whether the

## SPECIAL FEATURES

Two special features, not so much of the year in question as of the times, have already been mentioned, namely the tendency to take active and new methods to get rid of the small school and to extend elementary education into outlying unorganized districts. The legislation requiring the closing of schools where the average attendance has fallen below a certain minimum and to convey or board the pupils to or at neighboring schools, it will be noticed, is a further step taken by a province which has for some time held the lead in consolidation. The providing of correspondence instruction to outlying districts is a step worth more than a passing notice, as is also the providing of itinerant teachers for such districts. That the benefit of correspondence courses will chiefly or mainly affect the children of intelligent parents does not detract from the value of such courses. To fully estimate their value it is necessary to have a clear picture of life on prairie homesteads in new settlements. A very fine type of settler was often discouraged from either settling at all in or from bringing his family to a part of the country where schools could not possibly be provided for a number of years. When this fine type actually did settle with his family the father or mother generally tried to teach the children and realized as never before the necessity of some training for, or some guidance in, this undertaking. In the meantime there were long winter evenings and there was only too much leisure to teach the children if the father or mother only knew how. Series of lessons prepared by the Departments of Education with instructions as to how to present them now supply such parents with material to teach, with a guide as to how to teach the material and with the proper order in which to present what is taught. This means that the child who arrives at six or seven has not to wait until he is past the age to begin school before he knows how to read, and when a school is at last provided in his district he has still time to obt

The continuation of the upward trend in the proportion in high school grade was quite apparent during the year. There is a slight manifestation of a slowing up, especially in the case of girls, in the provinces which have had a large proportion for some years, which may be an indication that a limit is being approached. The marked increases have taken place in newer provinces. This proportion of the total enrolment of eight provinces in secondary grades (excluding technical but including private schools) is now over nine and one half p.c. This is higher than the proportion in any one province in Canada a few years ago. It is not exceeded

by more than two provinces so that the average is unusually well representative of all eight provinces. It is a question whether the limit will very far exceed the present proportion of girls in the province which shows the highest proportion, namely about 13 p.c. When it is considered that the high school grades proper only include grades IX to XI (the number in Grade XII being practically negligible) and that the elementary grades take at least nine years (on an average) it will be seen that nine or ten per cent is a very high proportion.

The tables on subjects of study in high school grade in section 5 should be of considerable The tendency mentioned last year of an increasing popularity in the case of languages. especially Latin, and a falling away from the natural sciences, is again apparent. It will always be a matter of opinion as to whether the significance of this is good or bad but the cause of it is difficult to explain. Speculation on the matter is very unsafe so long as there is no certainty as to whether the attraction to language is a question of their popularity with the pupils attending or due to other causes, electives notwithstanding. It may be symptomic of the times or it may be symptomic of the previous training of the teachers. The results of high school examinations would seem to indicate that there is no universal decrease in the number of failures as a result of electives. This would point to the fact that higher standards are being required and that the non-student is not better off than before while the student with specialized abilities is being benefited. As this is the purpose of introducing electives they seem to be bringing results.

The most important statistical feature ought to be the standing of pupils at school so far as this standing can be measured. Sections 2, 3 and 4 of this report are devoted to this pur-Tables 13, 22, 23, 45, and 46 give summaries of the grade of pupils at each age in publicly controlled and private schools, in urban schools, in rural schools and of boys and girls, all but one province being practically covered in this survey. While this manner of measuring the actual standing of pupils in so many different provinces may theoretically at least have many weak points, the actual results show properties which cannot be explained except on the assumption that actual conditions are being represented. For example it might be expected that the grading in rural ungraded schools is generally so different from that in urban schools that the two would be incomparable. Some evidences of incomparable grading are seen, but it is remarkable that this incomparability is not great enough to disguise characteristics which are explainable only by natural differences between urban and rural schools. There are two ways in which the grading of rural schools might be expected to differ from that of graded schools. One of these expectations is based upon the suspicion that the teacher in an ungraded school would show less skill in grading pupils than the teacher in graded schools. The guidance given by the inspector is overlooked, however, in the forming of such a theory. The second is more important. The classes in an ungraded school are often combined for convenience in teaching. Where this is done arbitrarily and by the teacher alone no great harm can result to statistics, but when it is done systematically so that such combinations of grades take such names as but when it is done systematically so that such combinations of grades take such names as "Forms" or "Standards", the teacher is apt to report a pupil in Form IV, for example (=Grade VII or VIII in Ontario; Grade V or VI in New Brunswick, etc.) as being in Grade IV. Careful directions are given teachers in order that they may report the grade properly, and in compiling returns it is not difficult to tell when the "Form" instead of "Grade" is reported. The errors that can have crept in from this source must be very small. The differences shown between urban and rural schools do not consist of vagaries which might be expected to arise from the causes mentioned. The grading shown in rural schools is almost fully as coherent as that shown in urban schools, especially between the ages of 7 and 13. The chances of being in a certain grade at a certain age are equally as good in rural as in urban schools but the grade itself is somewhat leaves in the word school. what lower in the rural school. In Bulletin 24, 1920 of the Bureau of Education in Washington, what lower in the rural school. In Bulletin 24, 1920 of the Bureau of Education in Washington, pp. 27-29, the method of correlation of age and grade is used to compare the standing of pupils in three cities in the United States. Without going into the technicalities of this method and that of devising a single index to show the yearly rate of progress it may be stated that these methods were used in analysing the summary tables of age and grade already mentioned to compare rural and urban and boys and girls and all schools.

The general results are as follows: Taking Table 13 showing the age and grade of 1,364,040 pupils of both sexes and including rural and urban and public and private schools, it is to be noticed that the general aspect of this table is as good as that of one of the three U.S. cities mentioned; that is, the chances of a pupil being in a certain grade at a certain age in the case of a million and a third pupils representing eight provinces and rural and urban pupils in Canada are about equal to what they are in one city with only 2,425 pupils. The rate of progress a year is roughly speaking .77 of a grade in the Canadian figures and .80 in the figures of the city in question. These two rates are practually equal.

Examining further the Canadian table it is noticeable that the rate of progress between the ages of 7 and 13 is ·85 of a grade a year; between the ages of 14 and 17 years it is ·89 of a grade a year and for all ages ·77 of a grade a year. Since the number represented is so very

large the above comparative rates are worthy of notice.

In comparing urban and rural and boys and girls only the ages of 7 to 13 were used. In all four the chances of being in a certain grade at a certain age are about equal, the grade being different in each case. The rates of progress per year are as follows:-

| Rural |      |
|-------|------|
| Urban | 91 " |
| Girls |      |
| Boys  | 82 " |

<sup>1</sup> See, however, foot note to page xxxi.

It is remarkable that boys at the ages of 7 to 13 show a slightly better rate of progress than girls. The girls on the other hand show a slightly better correlation between age and grade, that is, they show a slightly smaller scattering of grades around each age or of ages around each grade than boys. The difference in either this respect or in respect of progress is however, so very slight as to be insignificant. The true statement of the case seems to be that no sex differentiation is shown in the tables of age and grade, but that a significant difference is shown in

the rate of progress from age to age between urban and rural schools.

It should be noticed that when a certain fraction of a grade or year is mentioned it does not refer to a year at school but a year of age—quite a different thing. It should also be mentioned not refer to a year at school but a year of age—quite a different thing. It should also be mentioned that while the average grade of girls is slightly—very slightly—higher than that of boys, the average age of girls is also higher. The evidence that the rates of progress of boys and girls are practically equal is borne out by the census figures of 1921 which indicate that the regularity of attendance of the two sexes shows hardly any difference. The girls, however, remain longer at school. The percentage of boys over the age of 14 years enrolled is 18-9, of girls 20-4. In this connection it should be remembered that the rate of progress is greater after the age of 13 years than before this age. In spite of the fact that grade VIII and the high school grades are faced with provincial examinations there is evidence that each of these grades takes a shorter time on an average to complete than the earlier grades. These points explain why the proportion in high school grades of girls is higher than of boys.

It is interesting to find that while the proportion which those below 14 to those above this age in elementary grades is higher in the case of girls than of boys the contrary is true of the proportions below and above 14 in secondary grades. When rural and urban pupils are examined on the same basis it is seen that 12·5 p.c. of the total in elementary grades in rural schools are above 14 years of age as compared with 11·1 p.c. in urban schools. On the other hand 15 p.c. of the total in secondary grades in rural schools are below 14 as compared with 11 p.c. in urban

 ${
m schools}.$ 

# CHAPTER II.—REVIEW OF PROVINCIAL EDUCATIONAL ACTIVITIES

### PRINCE EDWARD ISLAND

Summary of all Institutions.—During the school year 1923-24 the number of pupils and students in all educational institutions in Prince Edward Island was 18,614. These were distributed as follows: 17,281 in 472 elementary and secondary schools; 338 in Prince of Wales college; 293 in agricultural and technical institutions; 210 in the University of St. Dunstan's; 11 in the schools for the blind and deaf at Halifax; 432 reported in private, elementary and secondary schools; and 29 in Indian schools. In addition to these there were 166 residents of Prince Edward Island in Canadian universities and colleges outside the province. This brings the total up to 18,780.

Publicly controlled Elementary and Secondary Schools.—The 17,281—8,747 boys and 8,534 girls—enrolled in publicly controlled elementary and secondary schools, were accommodated as follows: 10,982 in 416 primary (ungraded) schools and 6,299 in 56 graded including high schools. These were in addition to 338 in Prince of Wales College. It is interesting to see that the pro-

portion in primary schools shows an increase over the figure of 1923.

Average Attendance.—The average daily attendance in the elementary and secondary schools outside of Prince of Wales college was 11,783 or  $68\cdot 2$  of their enrolment as compared with  $66\cdot 3$  p.c. in 1923. This average was distributed as follows: 6,959 or  $63\cdot 4$  p.c. of their enrolment in primary schools, and 4,824 or  $76\cdot 6$  p.c. in graded schools. The percentage in primary, that is rural ungraded schools, shows a considerable increase over that of 1923.

Grade, Age and Sex Distribution.—The distribution by grade, age and sex of the pupils in the publicly controlled schools of Prince Edward Island has been reported for two years, the grading system being now uniform with that of nearly all the provinces of Canada. There is a remarkable symmetry shown in the distribution of the pupils of this province which makes the data, especially those given in table 14, page 24, most interesting. Attention is drawn particularly to the distribution at the age of 12 years which resembles a curve of normal distribution. The median and mean grades coincide almost exactly and midways between grade V and grade VI.

Secondary Education.—The number of pupils in grades IX to XI in secondary schools other than Prince of Wales College was 1,494 while the secondary and higher grades in the college enrolled 338 making a total of 1,832 or 10·4 p.c. of the total enrolment in elementary and secondary schools. The technical pupils and the pupils of St. Dunstan's University raise this to 11·1. This percentage is remarkably high.

Teachers.—The number of teachers in 1924 was 614 of whom 139 were males and 475 females Of these 198 were in graded and 416 in ungraded schools. The average salaries showed an

increase over those of 1923 in the case of class I male and female teachers and a decrease in the other classes. The number of Class I teachers increased by 11 while the number of lower class teachers decreased by 10.

Teachers in Training.—The teachers in training in Prince Edward Island are in attendance at Prince of Wales College and take professional work at the same time as the academic work. Every first year student (128 in 1924) is required to take pedagogical as well as academic training.

Agricultural and Technical Education.—These two activities are under one organization both coming within the scope of the Dominion Technical Education Act of 1919. The institution is called the Prince Edward Island Agricultural and Technical school and is now in its fifth year. It is under the administration of the Department of Agriculture but subject to inspection by the Chief Superintendent of Education who also acts with the Commissioner of Agriculture in an advisory capacity touching matters relating to the school. During the year it had 97 in the day classes and 196 in the night classes as compared with 70 and 107 respectively during 1923. Students who successfully complete the two years' course are now admitted to the second year at the Nova Scotia Provincial Agricultural College. Forty seven school fairs were held in 1924 in which 190 schools and 4,950 pupils participated. The number of exhibits was 17,974, a considerable increase over the number in 1923.

Medical Inspection.—Ninety-three schools were medically inspected in 1924 and 3,334 pupils were examined, weighed and measured as compared with 93 schools and 2,802 pupils in 1923.

Higher Education.—Prince of Wales College which, especially in its third year does work of university grade showed in 1924 a registration of 338. St. Dunstan's University had a registration of 210. The number of residents of Prince Edward Island registered at other Canadian universities in 1924 was 142 and in other Canadian Colleges was 24. The second and third year students of Prince of Wales and the students of university grade at St. Dunstan's added to those in other universities and colleges make a grand total of 501 students of university grade to say nothing of residents of the province attending universities in the United States and elsewhere.

School Support.—The expenditure during the year was \$449,847 as compared with \$504,550 in 1923. Of this \$169,949 was contributed by the districts and \$279,898 by the Government. The cost per pupil enrolled was \$26.03 as compared with \$28.17 in 1923, and per pupil in average attendance, \$38.18 as compared with \$42.49 in 1923. In addition to the foregoing the sum of \$19,712 was expended in the operation of Prince Edward Island Agricultural and Technical School at Charlottetown.

## **NOVA SCOTIA**

Summary of All Institutions.—During the school year 1923-24 Nova Scotia had in all her institutions an aggregate of 120,609. This enrolment included 111,594 in general schools; 384 regular students and 299 summer students in Normal College; 4,070 in Vocational Schools including all night schools and all but the regular students of the Technical Colleges; 276 in preparatory courses at universities and colleges; 12 in short, special and correspondence courses at colleges exclusive of those mentioned in connection with Vocational schools; 280 in regular courses at colleges; 1,381 in Regular courses at universities; 1,329 in private elementary and secondary schools; 478 reported in business colleges (private); 216 in the schools for the deaf and blind, exclusive of the pupils from Prince Edward Island and New Brunswick and 290 in Indian Schools. This total corresponds to 123,482 in 1922-23.

General Schools.—Of the enrolment of 111,594 in ordinary day schools (grades I to XII) 72,714 were in 1,635 village, town and city schools (class rooms) and 38,880 were in 1,418 rural schools. These figures correspond to 73,566 in village and other urban schools and 40,892 in rural schools in 1923. This represents a decrease of  $1\cdot 2$  p.c. in graded and  $4\cdot 9$  p.c. in ungraded school pupils. The number of graded schools increased from 1,592 in 1923 to 1,635 in 1924 while the ungraded decreased from 1,445 in 1923 to 1,418 in 1924.

Average Daily Attendance.—The average daily attendance of 79,510 or 71.6 p.c. of the enrolment corresponded to 78,763 or 68.9 p.c. of the enrolment in 1923. All classes of general schools showed improvement in average attendance, but the greatest improvement took place in rural schools which rose from 60.5 p.c. in 1923 to 64.2 in 1924. It would seem, therefore, that instead of showing a loss in school attendance as would appear from the enrolment figures, the province made a real gain. This is further emphasized by data showing the attendance by 20-day groups. While the total enrolment decreased by 2,864 there was an increase of 4,521

¹Rural schools in the province include only ungraded schools; all the graded schools are included under the village and urban schools. The number of rural school sections decreased from 1,509 in 1923 to 1,498 in 1924; of village sections increased from 21,2 in 1923 to 217 in 1924 and of urban sections increased from 44 in 1923 to 45 in 1924. It would seem, therefore, that a part of the decrease in rural school enrolment was due to a change in status of the schools from "rural" or ungraded to "village" or graded and not to real decrease in the number of children attending school. Notwithstanding this assumed acquisition to village schools from rural sources the enrolment in these schools suffered a decrease from 21,282 in 1923 to 20,714 in 1924 or 2·6 p.c.; while the urban school pupils decreased only from 52,284 in 1923 to 52,000 in 1924 or about •5 p.c.

on the part of pupils attending more than 180 days. The p.c. attending 140 days or more, that is, 7 months or more, was 61·2 in 1924 and 57·1 in 1923, the absolute number attending this period having increased from 65,399 in 1923 to 68,099 in 1924.

(See further page xlix for interesting Legislation bearing upon the subject of attendance.)

Note.—The decrease in enrolment between 1923 and 1924 is subject to different interpretations. A summary of the increases and decreases may throw some light on the question.

|                                                                                                                                                                                                                                                                                              | 1923                                                                                                                                                                                                                                              | 1924                                                                                                                                                                                                                     | Absolute increase                                                                                                                                                                          | p.c.                                                                                                                                                                                                                                                                         |

The decrease seems to have taken place especially in the first half of the year before January 1924. The greatest decrease in the fourth quarter might be connected with the decrease in the attendance at the age of 5, 6 and 7 years. It is noticeable that out of the total decrease of 2,864 only 1,377 occurred at the regular school ages of 7 to 14 while 51 p.c. of it took place at earlier and later ages which contain only 26,016 or 23 p.c. of the enrolment. This probably accounts for the better average attendance in 1924. It is also noticeable that the greatest relative decrease occurred in the case of girls under 7 and boys over 15. If the general decrease were wholly due to exodus of the population it would be expected that the girls over 15 and not the boys would be the chief sufferers.

According to a census of the population 4 to 17 years taken by the school boards of sections in operation there was a decrease from 134,173 in 1923 to 129,972 in 1924, or of 4,201. Some of this decrease was no doubt, due to the closing of 21 schools in addition to the 59 schools not in operation in 1923. Of the 4,201 decrease, 2,343, or 4.8 p.c. of the population of 1923, took place in rural sections, 2,079 or 8.4 p.c. in village sections while there was an increase of 222 in city and town school sections. It would seem, therefore, that a change in status from rural to urban centres was responsible for some of the decrease in rural and village sections. By ages the decreases may be seen as follows:

| Ages                                                                      | Popu                                                                                                                         | lation                                                                                                                           | Decres                                        | ase                                                                                            | Decrease in school enrolment                                                                               |                                                                                                                                                     |  |

There was a marked decrease in enrolment at the age of 15 years also in enrolment of both sexes in grade IX, but there was no marked decrease in population at this age. There was a tendency to increase in Grades IV to VII also Grade I (a), that is, in those in Grade I for the first time. The rather heavy decrease in Grades I (b) to III cannot all be explained by decrease in enrolment at the earlier ages nor can this in turn be all explained by decrease in population. A tendency to improvement would shift the weight from the first three grades to the next three, while a tendency to postpone the commencement of school attendance would cause a decrease in attendance at 5 and 6 years. This in turn would explain an increase in Grade I (a) and a decrease in Grade I (b)

There is thus a grade selection, an age selection and a sex selection in the decreases of a nature which makes it improbable that the decreases were wholly or even mostly due to decrease in population. The population at each age from 7 to 13 according to the Census comes short of the enrolment at these ages so that they can not both be correct. The excess of the enrolment might be explained by duplication of registration. A shifting of the population, say from rural to urban centres causes this duplication so that a considerable difference might be shown in the figures of one year as compared with another according as this shifting prevailed to a greater or lesser extent. Thus more correct statististics would have the effect of an apparent decrease in the enrolment. It is clear that several agencies were at work in bringing about the decrease in school enrolment.

Grade, Age and Sex Distribution.—The tendency to shift the weight from the first to later grades mentioned in last year's report, was continued in 1924. Grade I formed a still smaller proportion of all grades than in 1923. This is no doubt due to many causes, but improvement in average attendance and marked decrease in pupils attending at 5 and 6 years of age are, no doubt, important factors in bringing about a decrease in the repeaters in Grade I as compared with the beginners. In 1924 there were actually 294 more beginners than repeaters reversing the condition of 1923 and overwhelmingly reversing that of each of the preceding years. While rural schools showed the same tendency as urban schools in this respect, village schools still showed a rather strong balance in favour of repeaters.

Secondary Education.—The enrolment in secondary grades decreased from 12,088 in 1923 to 11,632 in 1924. The proportion to the total enrolment, however, was about the same for the two years, namely about  $10\frac{1}{2}$  p.c. The proportion of boys to girls in high school work decreased slightly in 1924 being 1 to  $5\cdot7$  in 1923 and  $1\cdot64$  in 1924. The decreases, both the absolute and the proportions between the sexes, took place especially in the rural and village schools. Some of the absolute decrease in all schools might be due to pupils from rural and village centres attending high schools in urban centres in smaller numbers than in 1923 and thus involving a smaller amount of duplications, but there is little doubt that there was an absolute decrease and that boys rather than girls were affected. Of the 11,632 in high school grades, 6,341 were in urban, 2,147 in village and 3,144 in rural schools.

Teachers in Ordinary Day Schools.—The number of teachers in 1924 was 3,279 being an increase of 42 over that of 1923; of these 285 were male and 2,994 were female teachers. This forms a slight increase over the previous year in the proportion of males to females. By class of certificate, increases amounting in all to 35 were shown by classes A, B, C and permissive male teachers, and decreases amounting to 27 were shown by classes Academic, D and Temporary male teachers. Increases were shown by the four highest classes of female teachers (Academic, A, B, and C) amounting to 82 and 66 by the permissive while classes D and Temporary decreased by 114. The net increase therefore, has a tendency to eliminate the low class teachers. There was also a slight decrease shown in the number of teachers whose total service was one year or under while there was a decided increase in the number of normal trained teachers (1,738 as compared with 1,626 in 1923).

Teachers in Training.—The number of students attending the provincial normal college was 384 in the regular courses and 299 in the summer courses. The number in the regular courses makes a new record for the province exceeding the enrolment of 1923 by 12. Of these 71 were in the university graduates' course training for Academic certificates. Only 103 out of the 372 training as teachers in ordinary school subjects held certificates lower than Grade XI. The enrolment was made up to 57 males and 327 females as compared with 35 males and 337 females in 1923.

The summer courses during four weeks of July and August enrolled 299 students. The purpose of this summer course is merely to provide a minimum of training to candidates for license who have not yet attended the regular courses. It qualifies only for the two lowest classes of license and even these licensees reteive no diplomas. It takes the place of the local training schools which ceased to function in 1922. In addition to candidates for licenses other teachers attend these courses which include classes in scientific and cultural subjects and in handicrafts as well as pedagogy.

Rural Schools.—During 1924 there were 1,418 rural class rooms in operation as compared with 1,635 village and urban class rooms. These had 1,538 teachers and 38,883 pupils as compared with 1,741 teachers and 72,711 pupils in village and urban centres. The rural schools were in session an average of 191 days as compared with about 199 in other centres. The percentage of attendance was 64·2 as compared with 70·4 in village and 77·6 in urban schools, also as compared with 60·5 in rural schools in 1923. The median number of days attended was 131 as compared with 124 in 1923 and as compared with 168 in urban and 159 in village schools. The number of teachers whose total service was one year or under at the commencement of the school year in rural schools was 785; in other schools 318. The number with five years or less of experience was 1,310 or 85 p.c. in rural schools; in other schools 867 or about 49 p.c. Appreciable improvement is shown over 1923 in all the items mentioned. The number taking high school work was 3,144 in rural schools and 8,466 in other schools. It may be interesting to repeat the comparative table of subjects of study in rural and urban schools inserted in last year's report in order to note any tendencies characteristic of the year 1924.

|                                                                                                                                                             |                                                                                | Rur                                                                           | al                                                                      |     | Village and Urban                                                                    |                                                          |                             |     |  |

The tendency towards ancient and foreign languages to which attention was drawn last year was still more marked in 1924 in village and urban centres. Notwithstanding a decrease in the total number in high school grades there was an increase in such subjects as French, Greek, Latin and German. The drift in rural centres does not seem to show marked tendency.

Latin and German. The drift in rural centres does not seem to show marked tendency.

The number of pupils medically inspected in rural schools was 7,031 as compared with 43,815 in other schools. The proportion reported for medical and dental treatment was somewhat larger in rural than other schools and does not differ materially in this respect from the condition of 1923.

Agricultural and Technical Education.—The rural science summer courses taken largely by licensed teachers in former years have been discontinued as such. The summer courses are now attended especially by young candidates for the lower class teaching licenses who have not yet had normal school training. The work in rural science is carried on during the regular normal school session, also by means of lecture tours, etc. Under the auspices of the Agricultural College a farm course consisting of two terms each of three months duration was inaugurated to commence in January, 1925. In addition to conducting classes of instruction at the Agricultural College the members of the College staff assisted by members of the Federal Department of Agriculture conducted in February and March, 1924, two extension courses each of one month's duration one at Lawrence town, Annapolis County, attended by 30 students and one at Mabou, Inverness County, attended by 25 students. The enrolment in the regular course at the college was 33. That and the summer courses at the normal college was 299; that at the regular courses of the normal college, 384. The last two should be mentioned in connection with the subject of agricultural instruction since training in agriculture is considered part of teacher training.

Technical Education.—Under the direction of Manual training there were in operation 19 departments in Domestic Science with 21 teachers and 3,232 pupils or an increase of 94 over 1923. In Mechanic Science ("Manual Training") there were 15 departments with 14 teachers, and 2,282 pupils being a decrease of 294 over 1923 pupils. These departments are in the cities and towns only. In many centres this work is begun in Grade VI. The work has been greatly stimulated in Grade IX during the last few years by the fact that it has been made a subject in the provincial examinations.

Under the Director of Technical Education, who is also the princiapl of Nova Scotia Technical College, are carried on the regular university grade engineering courses, also short courses to provide some advanced technical training for men who cannot avail themselves of the regular courses. In affiliation are the Halifax Navigation School and the Victoria School of Art and Design. The college also carries on university extension work under: (A) correspondence study division and (B) Secondary technical schools including coal mining and engineering schools in five counties and Evening technical schools in the principal industrial communities of the province. These secondary technical schools receive a Federal grant under the Dominion Technical Education Act. The registration of the college is given in full in Table 133. The data on provincial technical education in Table 97 refers to the enrolment in the secondary

technical courses which is also given in Table 133.

The registration of engineering students was 41 regular and 25 special. Among the achievements of the year was a successful mechanical separation by one of the professors of the college of the oil producing matter in oil shale, called Kerogen, from the rock with which it is intimately associated. This opened up a new line of investigation in the treatment of oil shales. The results led to application to the Honorary Council for Scientific and Industrial Research for assistance in carrying on this work and a sum of money was granted for continuing the work for one year. The general line of investigation that is being followed is to determine the characteristics of typical Nova Scotia oil shales and by treating the shales under different conditions of retorting to establish criteria that will be of value in the design and operation of commercial plants. In 1924 for the first time the colleges of Acadia, Dalhousie, King's, Mt. Allison and St. Mary's joined the Technical College in a co-operative effort to give all of the engineering students their instruction in surveying in a United Summer Survey Camp. In previous years each college used to conduct its field work in its own camps. (Note—The different universities and colleges train the engineering students for two years after which they are admitted to the Technical College.)

The short courses are held during the first three months of the calendar year. The student enrolls for one special subject. The work is dovetailed with the regular engineering courses. At the end of the courses each student who has attained the required standard is given a short

course diploma.

From the Halifax Navigation School, a joint enterprise by the Dominion Department of Marine and Fisheries and the N.S. Technical College, passed 32 successful candidates at the government examination in Navigation in 1924

government examination in Navigation in 1924.

The correspondence division enrolled during the year 314 students, of whom 47 p.c. took industrial courses, 31 p.c. commercial courses, 17 p.c. college preparatory courses and 5 p.c.

home making courses.

The coal mining and engineering schools in Cape Breton North, Cape Breton South, Inverness, Pictou and Cumberland Counties, had 607 students, an increase of 38 over 1923. The Evening Technical Schools had 2,223 students.

Medical Inspection.—For Statistics See Table 100.

Special Classes.—For Statistics See Table 108.

Universities and Colleges.—For Statistics See Tables 126-142.

#### **NEW BRUNSWICK**

Summary of all Education Institutions.—During the school year 1923-24 the number enrolled in all educational institutions in New Brunswick was 83,507 of whom 79,265 were in ordinary day schools; 1,683 in technical schools; 442 in normal schools; 31 in technical teacher-training courses; 534 reported in business colleges; 421 in private elementary and secondary schools; 786 in universities; 71 in the schools for the deaf and blind at Halifax, N.S. and 274 in Indian schools. At the same time 483 residents of New Brunswick attended universities and colleges elsewhere in Canada. The total enrolled corresponds to 82,812 enrolled in 1922-23.

Enrolment in Ordinary Day Schools.—As most of the data connected with ordinary day schools have been reported separately for two terms (the first closed on December 31, 1923 and the second on June 30, 1924) instead of for the whole year, particulars which could not be calculated for the whole year are entered in the statistical tables of this report for the long term ended June 30, 1924. Of the 72,713 enrolled during this school term 35,839 were boys and 36,874 were girls; 22,704 were enrolled in cities and incorporated towns; 15,104 in other graded schools and 35,005 in ungraded schools. The number of graded departments was 948 and of ungraded schools 1,252. Increases in all the items mentioned were shown over the figures of 1923 the greatest relative increase being shown on the enrolment of other graded schools.

Average Daily Attendance.—The 79,265 pupils enrolled during the whole year attended a grand total (rectified for county fund apportionment) of 11,216,899·5 days as compared with 10,715,468 days in 1922-23. The schools were in session an average of 192·8 days as compared with 190 days in the previous year. These figures show an average number of days attended by each pupil of 141·5 days in 1924 and 136 in 1923. Table 8 giving the attendance of nearly all the pupils by 20 day periods show that the median number of days attended by each pupil in 1924 was 158 and that nearly 60 p.c. of the pupils attended more than 140 days. The same

table shows that in 1923 the pupils attended a median of only 149 days. The average daily attendance for the year was 58,179 and the percent of the enrolment in daily attendance was 73.4.

Grade, Sex and Age Distribution.—See Tables 51 & 52.

Secondary Education.—The majority of pupils in secondary grades in New Brunswick (2,123 in 1924) are taught in grammar schools situated in the county towns and free to all the pupils of high school grade of the county. About 1,062 high school grade pupils were taught in superior schools free to all pupils in Grade VII and upwards in the parish where the school is situated. As will be seen in section 5 the number of secondary pupils in other graded schools was about 240. It is impossible to give the number in ungraded schools as they are included in Form V. In comparison with previous years which gave the high school pupils by half years only, the number in Grades IX to XII in 1923 was 3,320 during the first term as compared with 3,315 in the corresponding term 1923, and 3,204 in the second term as compared with 3,041 in the corresponding term of 1923. The enrolment in the secondary departments of grammar schools was 1,862 in the first term of 1923-24 as compared with 1,936 in the first term of 1922-23. The figures for yearly enrolment as given in Table—are incomplete because of the non-inclusion of most of the ungraded schools. In the graded schools and some ungraded schools the totai in Grades IX to XII in 1923-24 was 3,419. Academic work is also done in the Normal schools which had 442 students so that in all about 4,000 pupils were doing work of secondary grade during the year. Further particulars may be seen in Section 5.

Teachers.—The number of teachers during the second term was 2,395 an increase of 97 over the corresponding term of 1923. The classification, average salaries and experience of these may be seen in Table 111. The chief superintendent reports that the supply of licensed teachers now equals the demand with the result that temporary licenses have been abolished and trustees have been induced to employ teachers of a higher class. The number of class I teachers increased during the year by 58 and of class II teachers by 45 while class III teachers decreased by 1. The number of teachers now with certificates of class I and higher is 823, and of class III, 346. The fact that there is a steady decrease in the number of teachers removing to new districts during the term would seem to be further evidence of increasing stability in teaching conditions.

Teacher Training.—The provincial Normal School had an enrolment of 442, a slight decrease over the enrolment in the previous year. This decrease was due not to shortage of applications for admission but to a process of elimination of applicants for low class certificates.

Rural Schools.—See table 90. Among the recent provisions there is an arrangement to pay a portion of the board of pupils in unorganized and isolated school distircts.

Technical Education.—The status of technical education in New Brunswick may be seen in Table 97. This refers to the features of technical education which were assisted under the Dominion Technical Education Act. Manual Training and home economics are carried on under a director of manual training.

Medical Inspection.—During the year there were 6 medical officers attached to centres and 8 nurses. The number of pupils examined during the year was 49,030 or about 62 p.c. of the total enrolment.

Special Classes.—Seven opportunity schools for retarded pupils have been opened in St. John city. Free kindergartens have also been authorized in St. John.

## **QUEBEC**

Enrolment.—During the year in which the latest statistics of all educational institutions could be brought together for summarizing purposes (1923) the total enrolment excluding duplicates in all educational institutions in Quebec was 577,404 pupils and students, of whom 500,356 were in Catholic and 77,048 in Protestant institutions. This enrolment included 537,406 in publicly controlled and independent primary schools, 5,339 in maternal schools, 1,555 in normal schools, 9,812 in Catholic secondary institutions which in this province extend the work to a degree in Arts, 7,223 in universities and independent superior institutions, 621 in schools for the deaf-mutes and blind and 15,448 in various other institutions including technical, agricultural and commercial colleges of university grade, as well as ordinary technical and night schools. The 577,404 represents an increase of 6,974 over the enrolment of the previous year.

The 577,404 were accommodated in 7,944 schools including 6,529 elementary schools, 776 model schools, 441 academies, 15 normal schools, 24 maternal schools, 21 classical colleges, 8 independent non-subsidized secondary institutions, 4 universities, 7 independent non-subsidized superior institutions, 5 schools for the deaf-mutes and blind, 1 school of fine Arts, 13 schools of arts in trades, 61 night schools, 6 technical schools, 1 polytechnic school, 27 dress cutting and dress making schools, 3 agricultural schools, 1 school for higher commercial studies and 1 dairy school.

Primary Schools.—The primary school in Quebec is so called in contradistinction to (1) superior schools (universities and professional colleges); (2) secondary schools (classical colleges, non-subsidized independent schools where classical education is given, and one institute of modern secondary education affiliated with Montreal offering secondary education to girls); and (3) special schools, such as technical schools, agricultural schools, etc. The normal schools are connected with the primary schools in the sense that they train teachers for primary school The primary schools reporting to the Department of Public Instruction are either (1) publicly controlled, that is, under the control of Boards of Commissioners or Trustees, or (2) subsidized or non-subsidized independent, that is not under commissioner or trustee control. Both classes of primary schools have hitherto been divided into three grades, via., elementary, model or intermediate, and academy or superior, primary schools. The Catholic primary schools on Sept. 1, 1923, were divided into nursery or maternal, primary elementary, and primary complementary schools. Since certain changes have been made in the course of studies, the primary elementary, in future statistics will correspond to the old elementary and model schools. The statistics of Protestant primary schools include those of intermediate and high schools, the high school course being within the meaning of a secondary institution.

In 1922-23 the enrolment in all primary schools in Quebec was 537,406 of whom 263,669 were boys and 273,737 were girls. These were distributed as follows:

| ,                                                                                                                                                                                                                                                                  | Under<br>Control of<br>Commis-<br>sioners                                      | Under<br>Control of<br>Trustees                                                      | Indepen-<br>dent                                                                     | Total                                                                                                  |

Average Attendance.—In all institutions the average daily attendance was 447,350 (exclusive of universities) or 78.4 p.c. of the enrolment.

Secondary Schools.—The secondary schools in Quebec are represented by (1) the 21 Catholic classical colleges; (2) 8 Catholic non-subsidized independent institution where classical education is given; and (3) by 46 Protestant high schools. In addition to these are certain institu-

tions offering secondary education to girls.

In 1923-24 eleven classical colleges and little seminaries with 1,146 students in Arts were affiliated to the University of Montreal while 9 with 1,022 students in Arts were affiliated to Laval. One superior school for girls with 42 students in Arts was affiliated to Montreal, 1 institute of modern secondary education with 16 students was affiliated to Laval and 1 with 177 students was affiliated to Montreal. Thirty convents and household science schools and 2 music schools aggregating 2,002 students in Arts were also affiliated to the two Catholic universities.

Teachers.—The number of teachers religious and lay in 1921-22 was 21,008, representing an increase of 584 over the previous year. This staff included 5,239 male and 15,769 female teachers.

Normal Schools.—There are now (1924) 17 normal schools including the recently founded schools at Beauceville and St. Jerome. Of these 16 are Catholic and one Protestant. These admitted 1,623 students and granted 667 diplomas in 1923-24. There are no more elementary diplomas granted and normal schools students now can not obtain a diploma before a two years' course has been completed. The teachers who have trained outside the normal schools and have to pass a board of examiners must reach the same standing as that attained in the normal The normal school enrolment of 1923-24 consisted of 552 in the first year elementary course, 535 in the second year elementary and 250 in the superior course in Catholic schools, 341 being in the agricultural, 120 in the commercial, 45 in the industrial and 1,184 in the domestic science sections. The 258 in the Protestant normal school consisted of 4 in the Kindergarten, 28 in the first elementary short course, 55 in the second elementary short course and 171 in the intermediate class. In both Catholic and Protestant institutions teachers are trained for higher positions in superior pedagogical institutes not included in the above lists which refer only to teachers training for primary school positions. The two and three years' training of Catholic teachers include now professional training as well as professional.

Special Schools.—These special schools in 1923-24 included 1 polytechnic school; 6 technical schools; 1 school for higher commercial studies at Montreal; 3 agricultural schools; 1 dairy

school; 61 night schools; 14 schools of arts and trades; 1 school of fine arts at Quebec and 1 at Montreal; 33 dress cutting and dress making schools; 24 nursery schools; 2 schools for the blind and 3 schools for the deaf-mutes, making a total of 151 schools enrolling 22,854 pupils or students. Several of these schools are of university grade. The following table gives a list of these schools with their registration in 1924.

Domestic Science Schools and School Gardens.—In addition to all the above but included with special schools were 69 domestic science schools situated in 45 counties and in the Cities of Quebec and Montreal and having in 1924 an enrolment of 9,276. The enrolment in these schools has already been included with that of primary controlled and independent schools. Five domestic science schools were founded in 1923 at the centres of Lachute, Ste. Thecle, L'Assomption, Montreal (Hospice St-Joseph) and Sorel. The number of school gardens in 1924 was 1,618 with 33,844 pupils operating.

Maternal Schools.—The number of maternal or nursery schools in 1924 was 24 with 105 teachers and 5,339 pupils of whom 3,164 were boys and 2,175 were girls. Twenty of these schools were under control of commissioners and 4 were independent.

Superior Education.—Superior education in Quebec refers to the work of the two Catholic Universities (Laval and Montreal) with their affiliated institutions and of the two Protestant Universities (McGill and Bishop's College) also to 8 non-subsidized independent superior institutions and 4 Protestant theological colleges. A number of the institutions already listed as special schools are affiliated schools of the Universities. Thus the Polytechnic school, the school of Higher Commercial studies and the Oka Agricultural school are affiliated schools of Montreal University; Ste. Anne's Agricultural school is affiliated to Laval; while Macdonald Agricultural School is a faculty of McGill. Six Grand Seminaries (Theological Seminaries) where they are not included with the Faculty of Theology of the Universities are listed among the schools affiliated or annexed to Laval; twelve little seminaries and 8 classical colleges are affiliated or annexed for the Faculty of Arts only with Laval and Montreal; that is, they have such courses as commercial, etc., which are not affiliated. The number of arts students in these little seminaries and classical colleges mentioned as affiliated for Arts was 2,168 in 1924. Since there were 6,570 in the classical course (that is, a course consisting of the regular high school course plus the four years in regular Arts work) the high school students of the colleges were evidently not included among the 2,168 mentioned as being affiliated for Arts. There are also affiliated or annexed to the Catholic Universities 1 Superior school for girls, 2 institutes of Modern Education, 30 convents or Household Science schools and 2 music schools. Three other colleges are said to be associated for Arts only, that is, they are affiliated but situated outside the province. These are St. Dunstan's, Edmonton, Jesuit College and College de Gravelbourg, in Saskatchewan. The faculties and schools which are combined or annexed to the Catholic Universities are Law, Medicine, Philosophy, Arts, Letters (Graduate work) Science, Dental Surgery, School of Comparative Medicine

<sup>1</sup> Graduates of this institution receive degrees as Civil engineers and chemical engineers.

2 The se schools train students in architecture and special courses such as scuplture, painting, etc. In addition to the 468 mentioned as being enrolled in the Quebec Schools, there were about 300 persons who follow the course of the History of Art given each week.

3 This school situated in Montreal prepares for degrees in Commercial Science and Accounting. Ten degrees in Commercial Science were issued in 1924.

4 The regular students of these train for degrees in agriculture of which 34 were issued in 1924.

4 The courses consist of an English course during December and a French course in each of the four following months also an inspector's course and a course at La Malbaie. Graduates receive diplomas as expert milk testers, butter makers, cheese makers and dairy inspectors.

and Veterinary Science, Pharmaceutical School, School of Scoial Economy and Political Science, Land Surveying School and School of Forestry, Superior Normal School, Superior School of Chemistry, Commercial Course, Course of Modern Languages, School and Conservatory of

Music, Dietetic Courses in Nursing, and Pedagogy.

In 1924 in the faculties and school above stated as being combined or annexed to the two Catholic universities were 3,389 students; in the affiliated or annexed schools were 5,422 and in the associated schools were 136 students, making a total of 8,947 students in Catholic institutions of superior education. In the Protestant Universities were 4,175 students. Adding to these 438 in the eight non-subsidized independent institutions where superior education is given and 206 in the four Protestant Theological Colleges we have 13,766 in superior institutions in Quebec as compared with 12,435 in 1923. These evidently do not include any preparatory or pre-university students. The full enrolment of the classical colleges and little seminaries may be seen in Table 0000. It is to be remembered that only the regular arts students of these are counted above with the universities and that the remainder of the "classical course" and those in commercial and primary courses are not counted. The enrolment of each university in 1924 is to be found in Table

Expenditure.—The expenditure on all institutions in 1923 was \$25,396,268 of which \$3,261,111 was contributed by the Government, \$12,427,783 was raised by annual assessment, \$906,617 by special assessment, \$600,717 by monthly contributions (a fee is required for every child between the ages of 7 and 13 inclusive unless this fee has been abolished by a resolution of a board of commissioners or trustees²) and \$8,200,040 by contribution of independent subsidized institutions.

Libraries and Museums.—The Provincial Statistician's report for the year contained interresting information on Libraries and Museums. The Libraries included 15 public and society libraries containing 518,961 volumes, 37,413 pamphlets and subscribed to 1,738 reviews and Newspapers; 225 parochial libraries containing 140,668 volumes and 14,982 pamphlets and 1,659 school libraries containing 3,141,791 volumes for the use of pupils. The total number of libraries is therefore 1,899 containing 3,855,815 volumes and pamphlets. In 56 museums replying to a questionnaire in September there were 386,309 specimens of which 140,467 pertain to botany, 88,513 to zoology, 49,956 to geology and mineralogy, 5,122 to anthropology, 5,346 to paleontology, 5,523 specimens of art, 54,145 mumismatics and 37,237 other specimens. The sum of \$23,695.47 was expended for the purchase and care of these specimens.

### **ONTARIO**

Summary of all Educational Institutions.—During the school year last reported (calendar year 1923 for public and separate schools; school year 1923-24 for other schools), the total number attending educational institutions in Ontario was 764,114. Of this number 519,271 were enrolled in 6,334 public schools (including 461 enrolled in 5 Protestant separate schools); 91,051 in 688 Roman Catholic separate schools; 9,337 in 189 continuation schools; 28,215 in 50 collegiate institues; 20,048 in 133 high schools; 2,093 in 22 night elementary schools; 2,764 in 15 night high schools; 9,184 full time pupils in 24 day vocational schools; 1,837 part time pupils in the same schools; 1,798 special pupils in the same schools; 36,452 pupils in 60 evening vocational schools; 77 pupil teachers in 4 Autumn model schools; 483 pupils teachers in 9 summer model schools; 92 in English-French Model Schools; 2,452 iregular and 225 summer students in Kindergarten Primary Course in normal schools; 133 Vocational teachers in training; 61 in the school for the blind at Brantford of whom 57 were from the prairie provinces; 401 in the school for the deaf at Belleville of whom 1 was from Alberta; 19,802 in 7 universities and 14 affiliated and professional colleges; 6,573 in 38 private elementary and secondary schools reporting; 7,297 in 59 private business colleges reporting; and 3,794 in 89 Indian schools. There were also certain extra-mural students in Model schools and a small number of students in secondary Agriculture schools. The above list does not include the students of Correspondence schools and of the Frontier College, as it is difficult to assign these students especially the Correspondence students to any province. This total of 764,114 corresponds to a total of 741,508 during the previous year.

Elementary and Secondary Day Schools.—(Public, Separate and Secondary Day Schools). Of the 519,271 public school pupils, 220,207 were in rural schools; 199,595 were in city schools; 76,063 in town schools and 23,406 in village schools. Of the 91,051 in Roman Catholic separate schools, 21,469 were in rural schools,; 43,860 in city schools; 23,828 in town schools and 1,894 in village schools. Thus, in what might be termed elementary schools in Ontario, (that is ,in contradistinction to organized secondary schools) there were 241,676 in rural schools; 243,455 in city schools; 99,891 in town schools and 25,300 in village schools. As seen in the first paragraph there were 66,784 pupils in organized day secondary schools including the full time pupils in Technical schools.

Average Daily Attendance.—The average daily attendance in elementary schools during the year was 425,480; in continuation schools 7,853; in high schools and collegiate institutes, 41,526;

<sup>&</sup>lt;sup>1</sup> Difference in date and in the manner of including affiliated institutions make some differences in the totals of these from the totals given above, but it will be noticed that faculty for faculty the figures are practically the same as those above. Any disc epancies in the latter are explained on the ground that one is based on the registration in the autumn and the other on that at the end of the year.

<sup>2</sup> This fee has been abolished in Montreal and certain other municipalities.

and in vocational full time classes 7,209; the total average daily attendance being 482,068. This represents an increase of 6,477 or 1.3 per cent, over that of the previous year. The distribution of these increases may be seen as follows:

| _                             | Average Attendance<br>1923-24          |                           | In<br>Pr                 | crease ov              | er<br>ear             | Per Cent of<br>Increase |                   |                            |                          |

During 1923 attendance officers were appointed in all the municipalities of the province, 845 having been named by township councils, 398 by urban school boards, 61 by boards in territories without municipal organization and 1 by a county council. In each of the 37 urban municipalities the Separate and Public School Boards chose the same individual. The percentage of enrolment in average daily attendance in all schools (72) is a record. Tables 4 to 7 showing attendance by months, ages, sex and nativity help to interpret this percentage figure. It is noticeable that in the mine months immediately preceding June 1, 1921, 94 per cent of the children 7 to 14 inclusive at school for any period attended upward of 7 months. It is also noticeable that 91.9 per cent of the population at these ages were at school and that only 13.6 per cent of the population at 7 to 14 failed to attend a period of over 7 months. At the ages of 5 to 19 years inclusive, over 90 per cent of those at school attended for a period of over 7 months. Of the 49,549 attending at the ages of 5 and 6 years only 68 per cent attended this period. At the age of 7 years they had reached what was practically the maximum regularity for all ages, 90 per cent of those at school having attended from 7 to 9 months, a maximum which remains fairly steady up to the age of 19 years. It is also noticeable that the minimum age for compulsory attendance, 8 years, raised the percentage at school for any period only from 86.4 at 7 years to 93.4 at 8 years. In 1911 the percentage of those at school at the age of 7 to 14 who attended 7 to 9 months was 88; the percentage of the population at these ages who attended this period was 74; the percentage between the ages of 5 and 20 of the pupils attending this period was 85; the percentage between the ages of 5 and 6 was less than 50.

Age-Grade-Sex distribution.—During the year, statistics of distribution by age, grade and sex were compiled by the department for both elementary and secondary schools and for rural, city town, and village, both public and separate. These statistics are reproduced in this report in sections 3, 4, 5 and 6. A comparison between rural and urban schools should not be made without taking into consideration the statistics of secondary schools which are given in section 4. The statistics of secondary schools, however, are as on June 30, 1924, while those of elementary schools are for the calendar year 1923, so that the ages in the two grades of schools are not exactly comparable.

Secondary Education.—Secondary education should not be confused with secondary schools. Table 63 on page 48 shows that there were in attendance in secondary grades in Ontario during the calendar year 1923, 9,738 pupils in public and separate schools, of whom 4,199 were in cities, 402 in towns, 354 in villages and 4,783 in rural schools. These were all in addition to the pupils in secondary schools which now exist under four names: continuation schools, providing facilities for secondary education to village and rural pupils; high schools; collegiate institutes; and day technical schools. In all institutions offering secondary education, then, there were 76,522 pupils, of whom 9,738 were in graded or ungraded "elementary" schools; 28,215 in collegiate institutes; 20,048 in high schools; 9,337 in continuation schools; and 9,184 in full time classes of day technical schools. This corresponds to 69,455 in the previous year. The secondary grade pupils in elementary schools are called fifth class pupils. There are in existence special organizations called fifth classes to the number of 176 with an enrolment in 1923-24 of 1,723 pupils. The fifth class includes the work of Grades IX and X and corresponds to the lower form of secondary schools. Except perhaps in cities it eventually evolves into a continuation school, then into a high school and finally into a collegiate institute, according to the growth of the centre in which it is established.

Among the factors contributing to the general increase in enrolment in secondary schools, special mention should be made of the continuation schools. In 1923 there were 14 of these

schools open for the first time. The continuation schools are divided into three classes; "C" one teacher schools (that is one teacher devoting full time to high school work) or one full time and one part time teacher; "B" two teacher schools; "A" three or more teacher schools.

Of the 9,337 pupils in continuation schools in 1923-24, 5,132 or nearly 55 per cent were children the heads of whose families were occupied as agriculturalists; 1,083 were from the trades, 982 from commerce, 901 from labouring occupations and 282 from profession. This shows that the continuation school functions to a great extent as a rural secondary school. Table 78 shows the proportion of children from the different occupations in all secondary

The attendance at the High and Continuation Schools throughout the Province shows no diminution. The Regulations issued in 1922 have met with general approval and have had the added effect of encouraging students to continue at school and attain a higher standing. Regulations governing the admission of candidates to the High and Continuation Schools have placed greater responsibility on the local Entrance Boards in determining the fitness of students

In 1924 the new courses of study in the secondary schools.

In 1924 the new courses of study for the Public and Separate Schools were issued and put into operation in the schools. These courses have been prepared in response to a widespread belief that the former courses of study were too burdensome. A serious attempt has been made to lighten them and to give them greater elasticity. In some subjects the field of work to be covered has been considerably reduced. In other subjects many details that have little relation to the pupils' life have been eliminated. Greater freedom has been provided in some subjects by the prescription of a brief minimum course to be taken in all schools and a broader supplementary course from which selections may be made to suit the conditions of the individual

Teacher-Training.—The training of teachers in Ontario is organized under a director of professional training. His sphere includes the college of education with an enrolment of 358 students; 7 normal schools with an enrolment of 2,452 students; and 13 model schools with an enrolment of 560, besides 92 in English-French Model Schools, 133 in Vocational Schools and 225 in Kindergarten Primary Teachers-in-training Summer Courses.

The year 1924 saw an increase of 28 in the enrolment at the College of Education, and of 23 in that of the Normal Schools.

Rural Schools Organization and Consolidation.—(See Table 90 page 64). As shown above and on page 64, during the calendar year 1923 there were 241,676 pupils in rural schools in These were accommodated in 6,066 schools with 7,159 teachers, 815 male and 6,344 Of the schools 5,208 were one-room schools. Of all the rural schools, 414 had school medical inspection; 65 nurse inspection with medical supervision; 273 inspection by nurses only; and 60 dental inspection. The nurse inspection was done by a staff of 37 nurses. In the matter of special subjects taught 54,552 pupils were instructed in agricultural subjects; 19,520 in manual training; 9,675 in household science and 179 in commercial subjects. There were 5,669 of the rural schools with libraries. The daily average attendance of these rural schools was 154,648 or 65 p.c., of the enrolment or 83 per cent of the possible attendance as compared with 69·7 p.c. and 87·8 p.c. respectively, in all public and separate schools. In all these elementary schools the total possible aggregate attendance for the year 1923 was 94,291,454 and the actual aggregate was 82,793,984 or 87·8 per cent of the possible. In arriving at the possible aggregate no deductions are made for illness and all the school days for the year of a pupil once enrolled as well as all the school days of a child of compulsory school age (unless exempted by law) are counted, so long as they are residents of the school district or until entered in a secondary school. Duplications of enrolment as between two or more elementary schools and as between elementary and secondary schools do not enter into this calculation; neither does the fact that a pupil, once on the roll, if only for a few days, is counted in the enrolment of the year. Thus the percentage of actual to possible attendance—87.8—as given above represents the true situation as to attendance in the elementary schools of Ontario.

Perhaps the most definite facts in comparison between rural and other schools is afforded by the figures of the Dominion Census of school attendance. It has been already pointed out that of all the children between the ages of 7 and 14 inclusive in Ontario, 91.9 p.c. attended

school for some period and that of the latter 94·1 p.c. attended between 7 and 9 months during the nine months immediately preceding June 1, 1921.

From the point of view of compulsory attendance laws it is necessary to take into consideration the ages of from 8 to 13 inclusive, or the age from which full attendance is required by the compulsory attendance act; the ages of 14 and 15, or the age at which attendance is required by the Adolescent Act (bearing in mind that those not attending the full time during those two years are required to attend part time at 14 and 15). At the ages of from 8 to 13 there were 150,858 rural and 187,266 urban children. Of the rural children 140,663 or 93 per cent attended school and of these 130,285 or 93 p.c. attended 7 to 9 months. Of the urban children 180,137 or 96 p.c. attended school; of these 175,147 or 97 p.c. attended 7 to 9 months; that is, over 93 p.c. of all children 8 to 13 attended 7 to 9 months. In other words 14 p.c. of the rural and 7 p.c. of the urban children attended less than 7 to 9 months. At the ages of 14 and 15 years there were 47,133 in rural and 56,015 in urban communities. Of the rural children 28,542 or almost 66 p.c. attended school, and of these again 25,107 or over 88 per cent attended 7 to 9 months. Of the urban children 40,374 or 72 p.c. attended school and of these 38,725 or 96 p.c.

attended from 7 to 9 months. Thus 53 p.c. of the children at 14 and 15 attended school for 7 to 9 months in rural and 69 p.c. in urban communities as compared with 86 p.c. and 93 p.c. respectively between the ages of 8 and 13. Whatever inferiority in regularity is shown by the 14 and 15 year group might be accounted for by the part time pupils.

Comparing now the attendance at the ages of 5 and 6 years—in rural communities there were 54,588 children at these ages of whom 19,354 or 35 · 5 p.c. attended school for some period. At these ages, 10,416 or less than 53 p.c. attended 7 to 9 months; in urban communities there were 70,725 at these ages of whom 30,195 or 42 · 7 p.c. attended school for some period; of these 22,956 or 76 p.c. attended from 7 to 9 months. Presumably these do not include the children beginning school after the first of June. The compulsory attendance Act requires that if children begin school under the age of eight they shall attend regularly during the term in which attendance was commenced. Out of 12,392 at all ages in rural communities who attended school for less than 4 months, 8,876 were 7 years of age or under; and out of 6,136 at all ages in urban communities who attended less than 4 months, 4,528 were 7 years or under.

There are now 27 consolidations in Ontario out of 71 original school sections. In these consolidations there were in 1923-1924, 3,212 pupils in graded classrooms and 38 in a one-room school. As already mentioned the Continuation Schools and Fifth classes serve rural

communities with facilities for secondary education.

Agricultural, Industrial and Other Technical Education.—The various phases of vocational or prevocational and cultural work in the schools included the following activities: 1, elementary agricultural classes; 2, manual training and domestic science in the ordinary schools; 3, agricultural secondary schools; 4, industrial and technical education in vocational schools; 5, work of college grades in agriculture and applied science.

Elementary Agricultural Classes.—During the year 1924 there were 1,891 ungraded public schools and 79 ungraded separate schools with classes in agriculture. In the same year there were 250 graded public and 65 graded separate schools with classes in agriculture. The schools with classes in agriculture have increased from 4 in 1903 to 2,285 in 1924. Since 1915, the number of high schools qualifying for grants have increased from 11 without plots to 39 with 27 plots in 1924. The number of pupils taking agricultural work in public and separate schools in 1924 was 83,462; in the continuation schools 429; in the high schools and collegiate institutes 2,146. The school fair organizations, to the number of 7,510 in 1923, are directly under the charge of agricultural representatives, who co-operate with teachers and inspectors. Courses are provided at the Ontario Agricultural College covering two consecutive summers of five weeks each. These courses were introduced in 1913, and since 1914, 201 teachers have qualified for Intermediate certificates in agriculture, 15 of these qualifying in 1924. In the normal schools, teachers in training for first class and second class certificates receive regular instruction in methods and have some practice-teaching in agriculture. Thirty schools are affiliated with the normal schools for this purpose. Summer courses at the Ontario Agricultural College in 1924 had 109 students of whom 1 was an inspector.

Manual Training and Domestic Science.—These activities are carried out by means of the "centre" system. Rooms are equipped in some central schools and pupils from other schools attend this centre at stated times. The morning classes continue for a period of one and a half hours and the afternoon classes for a period of two hours. In the larger schools Manual Training and Household Science teachers take charge of their subjects throughout the whole school,

and spend their whole time with the pupils of one school.

At present there is no provision made for qualifying Manual Training instructors other than that of the Summer Schools which continue for five weeks every summer. Such provision is under consideration in connection with the College for training Industrial teachers. Training Classes which continued for one year were formerly held at the Ontario Agricultural College. An experiment was initiated two years ago of holding classes for teachers in service at the Normal Schools on Saturdays throughout the year. Previous to this year Part I only of such course was given at the Normal Schools, and teachers attended in Toronto for the second Part of the course. Commencing with 1923-24, Part II has also been given at the Normal Schools in addition to the summer schools annually held in Toronto. Household Science teachers are trained at the College of Education and at Macdonald Institute, Guelph. Students entering these schools are required to possess a Second Class teacher's certificate. Successfull completion of this course entitles a student to what is known as the "Ordinary" certificate. The "Specialist" certificate in Household Science is obtained by a four-year University course.

Of the twenty-four cities in the Province, there is only one that has not introduced Manual Training and Domestic Science in the Public or High Schools, or both; out of the twenty-two towns having a population of 5,000 or over, nine have Manual training and Household Science in their schools; there are over five hundred Rural Schools in the Province teaching Manual Training, Household Science and serving at least one hot dish for the noon lunch. Grants are given by the Province to all schools under certain conditions for carrying on this work.

In all day schools except the vocational schools, there were 131,087 pupils taking manual

training and 81,330 household science.

Industrial and Technical Education.—The activities in manual training, and household science discussed above are in addition to what is known in Ontario as industrial and technical

education. The former courses are either included with the ordinary school courses or consist of regular or short summer courses given for the purpose of training teachers for the work in ordinary schools. On the other hand "Technical" education is carried on in a distinct system of schools (called technical or vocational schools). The day vocational schools are co-ordinate with secondary schools. Pupils qualified to enter day high schools are admitted to full time day courses in commercial or technical high schools; pupils of at least fourth form standing are admitted to a general, special or part-time course in an industrial, a home-making or technical high school; workmen or work women employed during the day may be admitted to a vocational evening school if competent to receive instruction therein. The vocational day schools, therefore, include all day technical work except (1) manual training and domestic science in the ordinary elementary schools and in the normal and agricultural schools; (2) agricultural work in the ordinary schools and in the agricultural high schools; (3) any kind of technical work, whether agricultural or industrial, above secondary grade. During the year 1923-24 there were in the 24 day vocational schools, 9,184 full time pupils, 4,859 of whom were admitted for the first time to secondary school. In 10 of these vocational day schools there were 1,837 part time day pupils. In 13 of the day vocational schools there were 1,798 special pupils. The subjects of instruction were ordinary academic high schools studies (English, History, etc.) and over 50 different kinds of practical vocational subjects. It should be noticed that among these were included housekeeping and commercial subjects. In 60 evening vocational schools there were 36,452 pupils. Among the interesting items of information given by the director of Tech-30,432 papils. Although the interesting items of information given by the director of Technical Education is the fact that of the 36,452 evening pupils 24,080 were born in Canada; 9,367 in the British Isles; and 3,005 in other countries. The number of teachers employed were 371 full time and 88 part time teachers in day schools, and 1,193 teachers in evening schools. The direction of vocational education includes also the training of teachers for vocational subjects. The third annual session of the Summer School for this purpose at Toronto, held

from July 2nd to August 1st, 1924, had an enrolment of 46 first year and 24 second year men, and 45 first year and 18 second year women. The second year students consisted of those who

had completed satisfactorily the work of the first year given in 1923.

The scheme of training vocational teachers, i.e., teachers of shop or practical subjects in summer courses terminated on September 1st, 1924. A new institution called the Ontario College for Technical Teachers has been established in Hamilton to train vocational teachers. The new course is a more extended and comprehensive one than the one replaced. Each teacher-intraining is required to take 20 weeks training, 10 of which may be taken in two summer courses of 5 weeks each, and 10 of which may be taken in an autumn or spring term. The Hamilton Technical Institute is used for observation work and practice teaching.

A step forward in the matter of co-operation between the school and industry in the training of apprentices has been taken in Hamilton where arrangements have been made with certain firms whereby the apprentices may attend the schools for four hours a week during the day or

two hours a week during the evening.

The condition under which the apprentices from one of the firms attend the Technical Institute are as follows:

- 1. All apprentices taken on are to have an educational standard equivalent to High school Entrance standing;
- 2. All apprentices are to attend classes at the technical school for the required number of hours per week;
- 3. All apprentices are to be paid the regular rate of pay for the time in attendance at day school. Pay is to be deducted in the case of absence from school on the same basis as absence from work:
  - 4. The Technical Institute is to submit a weekly absentee report to the Company;
- 5. All apprentices are required to write on an examination every six months, the examination to be set jointly by the Company and the school;
  - 6. The results of the examination will be taken into consideration in fixing rates of pay;
- 7. The Company will pay the registration fees for the evening classes at which regular attendance is required, and non-attendance without reasonable excuse or permission, will be considered cause for dsmissal.
- 8. The schedule of the work will be prepared jointly by the Principal of the school and the representative of the Company.

The Hamilton Technical Institute has had for some time a similar arrangement with the local branch of a typographical union. In Ottawa a co-operative scheme for making use of the technical school for the training of plumbers and steamfitters has been arranged. The City Inspection department makes use of the equipment of the school shop in conducting the examination for civic licenses. Certain other similar co-operative arrangements have also been made in Ottawa.

A new navigation school was opened at Midland in January, 1923, this being the third centre in the province in which day navigation schools are carried on during the winter.

Medical Inspection.—A school Health Division under a medical director reports the existence of some twenty units (with 2 commencing at the new year 1923), made up of a combination of rural and urban schools, for the purpose of employing a permanent school nurse. There were in 1922 in the province 63 centes equipped with full time school Health service, employing in all six physicians, 12 dentists and 95 nurses. (See further Chapter 83 of Legislation.)

Auxiliary Classes.—There are now (Dec. 1923) in Ontario 96 auxiliary classes for physically and mentally defective children as against 74 in 1921. These do not include six adolescent auxiliary vocational classes recently established in Toronto for the training of very backward

children over thirteen years of age—three for boys and three for girls.

These auxiliary classes consist of: 74 training classes for very backward children; 2 promotion classes for backward children; 5 open air classes or Forest Schools for delicate, anemic and undernourished children; 4 ambulance classes; 3 myopia classes; 1 lip-reading class and 9 other types such as hospital, sanatarium and institution classes. The teachers of ambulance classes go from home to home and the lip-reading class teachers visit a number of schools. A regulation has recently been approved which makes provision for the formation of a training class in any school area of which the whole or part is rural and which contains 12 or more children who should be placed in a training class. Provision has also been made for the formation of training classes composed of 28 pupils and two teachers. The Department provides free surveys of all areas where school boards desire to establish training classes. Thirty-five teachers attended the Auxiliary Class Teachers' Summer School 1923 and paid their own expenses. The Toronto Auxiliary Class Teachers hold fully attended meetings each month after four o'clock for the study of auxiliary class work. (See further Legislation page XLIX last sentence of Chap-

Higher Education.—Besides the State University of Toronto, and its federated universities, and one college in affiliation, there are 4 other universities and 14 colleges, all higher institutions having a net total of 10,372 regular university students, exclusive of Short Correspondence and Preparatory Students.

Private Schools.—The number enrolled in elementary and secondary private schools was 6,778. The analysis of these institutions may be seen in Table 143. Tables of business colleges will be found on page 155.

School Support.—The expenditure on education during the year was \$48,034,564. Of this \$4,378,876 was contributed by the Government while \$22,483,377 was expended on teachers' salaries. The corresponding figures for 1923 for each item mentioned were as follows: the total expenditure was \$41,416,804; of this \$4,040,035 was contributed by the government; \$20,915,594 was expended on teachers' salaries. Full particulars of the receipts and expenditures may be seen, Table 122.

## **MANITOBA**

Summary of All Educational Institutions.—During the school year 1923-24 the enrolment in all educational institutions in Manitoba was 157,667. Of this number 144,491 were enrolled in state controlled elementary and secondary schools, exclusive of Vocational Schools; 764 in schools for teacher training; 1,199 day pupils and 2,051 night pupils in vocational schools; 25 pupil teachers in summer schools for the training of vocational teachers; 82 Manitoba pupils in the school for the deaf in Winnipeg; 21 Manitoba pupils in the school for the blind in Brant-

m the school for the deaf in Winnipeg; 21 Manitoba pupils in the school for the blind in Brantford, Ont., and 3 in Nazareth school for the blind, Montreal; 2,582 in the provincial university; 2,021 in colleges, less duplicates in Universities and Colleges; 1,685 in business colleges; 663 in private elementary and secondary schools; and 2,108 in Indian Schools.

The accommodation for this enrolment was 1,985 elementary and secondary school buildings with 3,867 departments and 3,980 teachers; 5 Normal schools with 19 teachers; day vocational schools in 6 municipalities and evening in 1 multipality with 102 day and 43 evening teachers; 1 school for the deaf in Winnipeg, a school for the blind cityated in Brantford. On teachers; 1 school for the deaf in Winnipeg; a school for the blind situated in Brantford, Ontario, to which Manitoba pupils are sent by interprovincial arrangement; 1 industrial school for delinquents at Portage La Prairie; 1 provincial university; 5 affiliated colleges (Brandon College being affiliated with McMaster in Ontario and the others, including 5t. Boniface with the university of Manitoba); 1 law school; 1 agricultural college in affiliation with the provincial university; 5 private business colleges reporting, with a teaching staff of 28; 3 private elementary and secondary schools reporting, with a teaching staff of 42; and 50 Indian schools (See tables 1 and 2).

Public Elementary and Secondary Schools.—Enrolment.—Of the 144,491 pupils enrolled in elementary and secondary schools, 131,615 were enrolled in elementary and 12,876 in secondary grades. The accommodations for these were as follows: over 3,000 elementary departments with about 131,000 elementary grades pupil, and about 2,300 secondary grade pupils; 118 intermediate departments (that is schools having one teacher available for high school work) with 2,566 doing high school grade work; 43 high schools (schools with 2 teachers available for high school work) with 86 high school departments and 2,463 high school pupils; 9 junior high schools (schools doing work of grades VII, VIII and IX) with 1,126 doing junior high school work; 8 collegiate departments (schools with 3 teachers available for high school work) with 665 pupils doing high school work, and 11 collegiate institutes (4 or more teachers available for high school work) with 4,595 pupils doing work of high school grade. The increase in enrolment in these schools over the previous year was 2,122 or about 1.6 p.c. The number in secondary grade has increased 49 p.c. since 1921.

Average Attendance.—The number of pupils in average daily attendance was, 103,775, an increase of 4,988 or 5 p.c. over the previous year. The average attendance formed 71.8 p.c. of the enrolment, as compared with 69.4 p.c. in 1923. This is a considerable increase, but a still greater increase is revealed by analysis of the number of pupils attending by day groups from which the median attendance can also be deduced. Even since 1921, the census year, the percentage of the enrolment attending for 150 days or more has increased about twelve per cent.

The percentage of the total enrolment attending during certain periods since 1917 can be

seen in table 8. (See further first part of Chapter 49 Legislation page L).

Secondary Education.—The number in secondary grades was 12,876 or  $8\cdot 9$  p.c. of the total enrolment. This proportion of the total enrolment is about the same as in 1923. Thereis, however, more than one way in which high school enrolment may grow, one being in increase in those entering grade IX work and taking only a year of high school work and another in an increase in those who complete the high school scourse. Analysis of the high school enrolment since 1918 shows that 1924 was considerably in advance of previous years in respect to the latter form of increase, although there is no definite evidence of an upward trend since 1918.

| Year | Actual<br>enrolment<br>Grades<br>IX—XII                        | P.C. of total-<br>envolment in<br>Grades<br>IX—XII | P.C. of total<br>high school<br>en olment in<br>Grades<br>X—XII |
|------|----------------------------------------------------------------|----------------------------------------------------|-----------------------------------------------------------------|
| 1918 | 6,579<br>6,803<br>7,996<br>8,615<br>10,719<br>12,803<br>12,876 | 5.92<br>6.48<br>6.68<br>7.84<br>8.99               | 53<br>49<br>52<br>49<br>53<br>54<br>57                          |

The enrolment in grade XI has increased from about 40 p.c. of grade IX in 1918 to over 50 p.c. of grade IX in 1924. This is the natural final year of high school, for the number proceeding to grade XII is small owing partly to the fact that it overlaps to a certain extent the first year in Arts at the Universities and colleges. There is little doubt that the regulations governing teachers' certificates have contributed largely to this continuation on the part of pupils through the high school course instead of dropping out in grade IX or X.

Teachers.—The number of teachers during the year was 3,980. A somewhat abrupt drop between 1923 and 1924 has occurred in the proportion of male to female teachers. The males decreased in absolute numbers by 93 while the females increased by 137. While the total number of teachers increased only by 44 since 1923, the First Class teachers increased by 89, the second class by 18, and the specialists by 4, so that there was a decrease of 77 in the number of teachers with lower class certificates. The number of teachers' residences has now increased to 305, several towns and villages having principal's residence.

Teachers in Training.—(See Table 119). In the provincial normal school in Winnipeg the enrolment was 399 students including 277 in the course for Second Class teachers, 77 in the year course for first class teachers and 45 in the course for university graduates. In the provincial normal school in Brandon were registered 123 students training for Second Class certificates. In the 3 local Normal schools there were 173 in the course for 3rd Class Teachers.

The Manitoba Teachers' Summer School, a joint enterprise of the Department of Education and the University of Manitoba, had an enrolment of 466 students of whom 443 belonged to the province. A list of 30 subjects taken during the year included 23 Academic subjects, of which grade XII and First Year Physics attracted the largest number of students (107), four professional (teachers') courses and 3 technical courses of which Home Economics and Household Art attracted 82 students.

Rural Schools.—The Miniota Municipal school district in 1924 completed its fifth year of operation under the (rural) municipal system of organization. The work of education in this municipality was carried on at 8 centres, the aggregate enrolment being 497 of whom 437 were in graded and 60 in ungraded schools. Of this enrolment 103 were in high school grades of whom 52 were boys and 51 were girls. The percentage in daily attendance was 90.5. The council of the municipality collects taxes for five union school districts within its borders. These five include a one-room rural school, a two-room, a three-room and a five-room consolidated school and the municipal school district.

No new consolidated districts were formed during the year, the existing number of consolidations being 110. In the cases of both the consolidated and the municipal school district the methods of financing are evidently a definite step in advance of the single rural one-room school

board.

An amendement was made to the public schools Act to provide that "whenever the average attendance of children in any school district for any time is five or less than five the trustees of such a district shall not engage a teacher for the ensuing term nor make any arrangements to open the school therein but shall make provision for the transportation of the children of the district to some adjoining district or districts, or shall make satisfactory provision for and pay the living expenses of such children in some other district and report the circumstances to the Department....."

The Supervisor of the School Attendance Branch of the Department of Education reported that 55,931 pupils in rural schools showed an average daily attendance of 61.57 or an increase

of 3.88 over the previous year.

Technical Education.—The statistics of technical education in Manitoba are given in Table 97. A six weeks' course in home economics was held at the Manitoba Agricultural College in July and August and attended by 16 girls. Provision is made for an advanced course of six weeks for those having completed the previous course. Boys' and girls' club work, school fairs and travelling libraries continue to gain in influence. The direction of the clubs was transferred from the Department of Agriculture to that of Education in 1923. A summer school for the training of technical teachers had an enrolment of 25.

Medical Inspection.—The number of Public Health nurses employed by various municipalities in the province was somewhat less than in the preceding year. The Red Cross made an important contribution in the newer settlements. Junior Red Cross Societies are making important contributions to the work of medical inspection; for example, one inspector reports that the services of a Red Cross dentist have become available for nearly two thousand children as a a result of the movement.

Special Classes and Institutions.—The Manitoba school for the Deaf had an enrolment of 167 of whom 82 were from Manitoba, 48 from Saskatchewan, 36 from Alberta and 1 from Indian Reserve, Saskatchewan. The blind children of the province are educated as wards of the province at the Ontario school for the Blind, Brantford, and the Institute for the Blind, Montreal. The Department pays their transportation from Winnipeg and the school fees, parents or guardians supplying all necessary clothing. Twenty Manitoba blind pupils varying in age from 9 to 21 attended at Brantford and 3 at Nazareth Institution, Montreal. The adult blind are visited and instructed through the Western Branch of the Canadian National Institute for the Blind and the province gives the institute an annual grant to assist in carrying on this work.

In connection with the juvenile court there is a detention home which is conducted as a place of study, and rescue. In connection with this home is a school which is conducted under the direction of the Winnipeg School board. The Department of Neglected and Dependent Children also collaborates with and reports to the Department of Education. Among its func-

tions is the supervision of newsboys, bowling alleys, billiard halls, etc.

The industrial school at Portage la Prairie is the provincial reformatory.

School Support.—The expenditure on education during the year was \$11,284,095 (\$8,919,619 excluding promissory notes). Of this \$1,096,010 was contributed by the government and \$10,188,085 by ratepayers, etc; (\$7,823,609 excluding promissory notes); \$4,849,712 was expended on teachers' salaries. The corresponding figures for 1923 were as follows: total expenditure \$12,999,254; amount contributed by the Government, \$1,011,048; by ratepayers etc., \$11,988,206; while \$5,081,809 was expended on teachers' salaries (See Table 122).

#### SASKATCHEWAN

Summary of Attendance in all Schools.—During the school year 1923-24, there were 213,573 enrolled in all educational institutions. Of this number 197,207 were enrolled in public and separate elementary and continuation schools; 6,947 in high schools and collegiate institutes, 1,706 in agricultural and technical schools under secondary grade; 1,621 in teacher-training institutes; 48 in the school for the deaf at Winnipeg; 22 in the school for the blind at Brantford, Ontario; 1,465 in universities and colleges; 441 reported in private business colleges; 2,619 in private elementary and secondary schools; and 1,547 in Indian schools. There were also 624 residents of Saskatchewan attending Canadian universities and colleges outside the province.

Publicly Controlled Elementary and Secondary Schools.—The 204,154 enrolled in publicly controlled elementary and secondary schools were distributed among the various types of schools as follows: 117,162 in rural schools; 22,646 in city elementary schools; 21,662 in town elementary schools; 35,737 in village elementary and continuation schools and 6,947 in high schools and collegiate institutes. (See Table 2, page 10)

Average Attendance.—The average daily attendance in 1924 in public and separate schools was 134,333, and in secondary schools 5,449, or a total of 139,782, as compared with 130,917 in 1923. The average attendance formed 68.47 p.c. of the enrolment as compared with 67 p.c. in 1923 and 65 in 1922. The percentage in rural schools was 65; in village schools 70; in town schools 75; in city schools 78 and in high schools and collegiate institutes 77. Since the data of

1921 can be compared with the census data for minute details of attendance it will be interesting to see in what respects 1924 differs from this year in attendance by groups of 20 days each.

| Number attending  | Absolute<br>numbers                                                                             |                                                                                                 | Per 1,000<br>enrolled                            |                                                      |

| Total             | 177,908                                                                                         | 204,154                                                                                         | 1,000                                            | 1,000                                                |

There are two features to be noticed in the above figures which do not seem to be peculiar to any one province but to the general drift of school attendance. In spite of the general improvement there is no improvement in the case of those attending less than 60 days. Those attending 140 days and more (that is 7 months and more comparable with the period of attendance ascertained by the census of 1921) increased from 450 per thousand in 1921 to 579 per thousand in 1924, but those attending less than 3 months instead of decreasing in the meantime, increased from 185 in 1921 to 191 in 1924. The census gave 733 per thousand at the ages of 5 to 19 as attending 7 to 9 months in 1921. There are many reasons for the difference between this and the 450 above, one being that other institutions than publicly controlled schools are included in the census figures, another being that 140 actual days attended as given by the provincial reports is different from "7 to 9 months" as given by the census. If a child had attended a few days during a month it is likely that he would be reported to the enumerator as having attended "a month". Thus the 450 would represent 7 or more full months, while the 733 would not necessarily do so. Perhaps a greater cause of discrepancy is the fact that children changing schools during the representation of attendance. schools during the year and registered more than once cause an understatement of attendance. If in the above table median figures be used it will be seen that half the children in 1921 attended more than 130 days, while in 1924 half attended more than 154 days so that attendance from this point of view has increased an average of 24 days in 3 years. It is here considered more important, however, that the attendance for a period approximating to a full year has improved from 450 in 1921 to 579 in 1924, or nearly 29 per cent. The rapid attrition of the 60 to 150 day attendance shows elimination of a waste which interferes with school progress more perhaps than any other feature.

Grade, Age and Sex Distribution.—See Tables 57 & 58.

Secondary Education.—The number of pupils reported in high school grades in 1924 was 15,996. Of this number 6,708 were enrolled in high schools and collegiate institutes, 1,780 in rural schools; 4,464 in village schools, and 3,044 in town schools over and above the town pupils enrolled in organized high schools and collegiate institutes. The number of boys was 6,586 and of girls 9,410. The enrolment of 15,996 corresponds to 13,547 in 1923. This is an increase of over 18 p.c. As there are over a thousand in day technical schools and 18 special pupils in high schools not included with the above it will be seen that there are over 17,000 pupils of secondary grade in publicly controlled schools in the province. Also there might be added 687 high school pupils in private schools. bringing the pupils of secondary grade up to about 18,000. Since Grade VIII also increased from 12,893 in 1923 to 14,020 in 1924 it would seem that the material exists for a further increase in secondary grades in 19251.

Teachers.—The number of teachers in 1924 was 1,879 males and 5,516 females. Of these 1,226 males and 3,509 females were in rural schools; 541 males and 1,923 females were in urban elementary and continuation schools; and 112 males and 84 females were in high schools and collegiate institutes. Their classification and salaries may be seen in Table 116.

¹ It is difficult to realize the effect of the age distribution of the population of Saskatchewan upon the enrolment in secondary as compared with elementary grades. Some idea of this effect may be given by the following figures. If 7 be taken as the normal age for beginning elementary school work and 15 as the normal age for beginning high school work, then for every 1,000 persons in Saskatchewan at the age of 7 there where only 618 at the age of 15. This means roughly that if all the children in the province at the age of 15 where in Grade IX and all the children at 7 years where in grade I, the former whould only be 61-8 p.c. of the latter; i.e. 61-8 p.c. in Grade IX would be really 1% p.c. Saskatchewan compares with the other provinces in this respect as follows:—

Population at 15 Years of Age for every 1,000 at 7 Years of Age

| Saskatchewan 6 |       | ritish Columbia | 702 | New Brunswick 832 |
|----------------|-------|-----------------|-----|-------------------|
| Alberta 6      | O. W. | lebec           |     | Nova Scotia 855   |
| Manitoba 69    | 95 On | ntario          | 815 | P. E. Island 900  |

According to age distribution, then, Saskatchewan should have the smallest proportion of her enrolment in secondary grades while Prince Edward Island should have the largest; but this would not mean that in Saskatchewan a smaller proportion of the population went on to high school than in Prince Edward Island. This point should not be overlooked when comparing the relative proportions in elementary and secondary grades.

Teachers in Training.—The number of teachers in training during the year 1924 was 1,621. Of these 204 were training for first class certificates; 531 for second and 886 for third class. The two regular normal schools are situated at Regina and Saskatoon. In addition to these are 7 local normal schools offering training for third class certificates.

Rural Schools.—The total enrolment in the 3,968 departments of rural schools in 1924 was 117,162, with an average daily attendance of 75,639 or about 65 p.c. of the enrolment as compared with about 63 p.c. in 1923. From data on attendance by day groups it is clear that the improvement shown by this increased percentage consists of a substantial increase from year to year in the number attending more than 160 days or about 8 months, and a decrease in the proportion attending from 3 to 7 months while the proportion attending less than 3 months

proportion attending from 3 to 7 months while the proportion attending less than 6 months remains practically stationary.

During 1923-24 there were 40 consolidations with 37 graded and 3 ungraded schools, the graded schools having 118 classrooms and 4,101 pupils, while the 3 ungraded schools had 95 pupils. The average attendance was 3,251 or about 80 p.c. of the enrolment, as compared with 65 p.c. in all rural schools. Of the pupils 2,182 or about 50 p.c. were conveyed. Some idea of the results obtained from these consolidations may be gathered from Table 92 which gives comparative data for consolidated and all rural schools. The contrast between the two kinds of schools is marked as it was in the case of data given for Manitoba in the 1923 report (See page of schools is marked as it was in the case of data given for Manitoba in the 1923 report (See page 55, Survey of Education, 1923).

Technical Education.—During the year day vocational classes were held in three municipalities with 47 teachers and 881 students, and evening classes in three municipalities with 46 teachers and 825 students. Besides the work done in these three municipalities, which work comes within the scope of the Dominion Technical Education, there were technical classes in at least one other centre. The activities in Agricultural education are of course in addition to the technical work mentioned. At the beginning of the year, there were 162 Rural Education Associations in operation. Among the activities directed by these associations are school exhibitions, boys' and girls' clubs (carrying out such projects as stock-raising, grain and vegetable growing, stock-judging, cow testing, nature study, cookery, etc.), tree planting, lantern lectures, school gardening and teacher-training.

Medical Inspection.-Medical inspection of schools which has been carried out on an extensive scale for some years seems to be meeting with very encouraging results. One of the most noteworthy of these results is the increasing proportion of children found free from defects.

Higher Education.—See statistics of Higher Education pages 94 to 114.

## ALBERTA

Summary of Enrolment in All Institutions.—During the school year 1923-24 the enrolment in all educational institutions in Alberta was 159,971. Of this number 147,373 were in ordinary in all educational institutions in Alberta was 159,971. Of this number 147,373 were in ordinary day schools, 4,560 in vocational schools; 968 in teacher-training institutes; 1,558 in universities and colleges; 36 in the school for the deaf in Winnipeg; 1 in the school for the deaf at Belleville, Ont.; 5 at Nazareth institute for the deaf, Montreal; 15 in the school for the blind in Brantford, Ont.; 1 at Nazareth institute for the blind, Montreal; 2 at the school for the deaf and blind, Point Grey, B.C.; 2,213 in private business colleges; 2,061 in private elementary and secondary schools; and 1,195 in Indian schools. The number mentioned in vocational schools does not include students in agricultural schools. The enrolment of students in summer schools for teachers, to the number of 331, is included with that of universities.

Publicly Controlled Elementary and Secondary Schools.—The 147,373 enrolled in publicly controlled elementary and secondary schools were accommodated in 4,742 departments of 3,034 schools districts. Of this enrolment 55,998 were in 66 cities and towns, 4,673 being in the separation of the secondary schools districts. rate schools; 23,920 were in departments of other graded schools; the total number of departments in 293 graded schools being 2,001; 67,445 were in 2,741 ungraded schools. Of the graded school pupils 6,527 were in 172 class rooms of 68 consolidations; 5,831 in 175 class rooms of 80 rural graded schools not in consolidations.

Average Daily Attendance.—The average daily attendance in these schools was 105,852 or 71.8 p.c. of the enrolment, this being an improvement even on the record of 1923. The average daily attendance was 7.91 times that of 1905. This improvement in regularity of attendance ance over last year is still more evident when it is seen that although the total enrolment was less in 1924 than in 1923 the aggregate days attendance was 19,642,394 in 1924 as compared with 19,452,558 in 1923; the number of pupils attending 140 days and more was 85,991 in 1924 as compared with 82,946 in 1923. The decrease in enrollment occurred wholly in the case of pupils attending less than 120 days or about 6 months. The number of these was only 50,258 in 1924 and 54,231 in 1923. It is clear therefore that the effective enrolment was greater in 1924 than in 1923.

The increase in the aggregate attendance and in the proportion attending more than six months is, no doubt, partly due to the fact that the average length of the school year was slightly greater in 1924 than in 1923. This point, however, is apt to be misconstrued. Increase in the average length of school year, that is, of the number of days schools were opened, is not due to increase in the number of days in the school year, which is an incidental matter, but to decrease in the number of schools which keep open less than the full year. This point has an interesting bearing upon the cost of education, a point which is apt to be overlooked. In 1905 the average length of the school year was 174 days, or taking a lower year, 1907, it was 159.6 days; in 1924 it was 184.7. This shows a difference of 25.1 days or an increase of almost one-sixth over 1907. This increase is not shown in the increase in percentage of attendance. Increased cost of education is almost directly proportional to this increased length of the school year, since short-term schools which were chiefly responsible for the shorter year in 1907, cost in teachers salaries only according to the time they were open, while in fuel they cost practically nothing since they were open only in the summer. Thus by virtue of the increased length of the school year alone the current expenditure would be increased by one-sixth since 1907. By virtue of the cause which has increased the length of the year it follows that this increased length means increased efficiency. In the mean time it is seen that the average daily attendance has increased nearly 8 time since that period which increase is independent of the increase in the length of the year, except in so far as the latter encourages regularity of attendance. (See further Summary of School Act, page L).

Grade, Age and Sex.—The pupils in general schools were distributed by grade as follows: Grade I, 28,761; II, 18,218; III, 19,277; IV, 17,982; V, 15,468; VI, 13,180; VII, 10,410; VIII, 10,631; IX, 5,891; X, 4,086; XI, 2,606; XII, 863; total 147,373. The increase in the upper grades as compared with lower since 1912, the year in which the twelve grade system was introduced may be seen as follows:

P. C. OF TOTAL ENROLMENT

| Year                | Grade I                                               | Grades<br>IX to XII                                                                  | Grades<br>VII to X                                                                     |
|---------------------|-------------------------------------------------------|--------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------|
| 912 (calendar year) | $\begin{array}{c ccccccccccccccccccccccccccccccccccc$ | 3·92<br>4·09<br>4·44<br>5·38<br>5·81<br>5·62<br>6·22<br>6·52<br>6·74<br>6·04<br>7·53 | 14·65<br>14·50<br>15·51<br>17·19<br>18·06<br>18·45<br>19·42<br>20·39<br>21·31<br>18·94 |
| 924 " "             | 20 87<br>19·51                                        | 8·29<br>9·13                                                                         | 22·73<br>23·39                                                                         |

The distribution by grade of pupils leaving school at the age of 15 years since 1919 was as follows:

| **                                                                                 | Grades                                       |                                                    |                                                 |                                                      |                                               |                                                   |                                                    |  |

| 1919.<br>1920.<br>1921.<br>1922.<br>1923.<br>1923.<br>1924.<br>Six years' average. |                                              | 26·60<br>29·98<br>33·55<br>29·79<br>28·50<br>32·87 | 8·40<br>12·14<br>6·65<br>6·59<br>11·90<br>14·48 | 3·10<br>5·92<br>1·47<br>2·34<br>4·59<br>7·36         | 2·00<br>3·41<br>0·24<br>0·81<br>2·18<br>2·47  | 0·40<br>2·80<br>0·00<br>0·02<br>0·40<br>0·07      | 100<br>100<br>100<br>100<br>100<br>100             |  |

The above two tables speak for themselves. Grades IX to XII or the high school grades, have now increased in proportion to the lower grades so that the proportion is now equal to that found in old provinces, cities, etc., and near to what seems to be a limit. The proportion above Grade VI, it is seen, passed the proportion in Grade I in 1923. The increase in this proportion and the decrease in that of Grade I are probably more significant than even the increase in the high school grades. The upper limit of the age of compulsory attendance is about the average age of the pupils in Grade VIII (15 years is limit of compulsory attendance; 14·5 years is average age of Grade VIII). On the average, therefore, there is not compulsion to attend the high school grades so that the increase in the proportion in these is voluntary. The increase in the proportion in the upper elementary grades, therefore, has a different significance. It might mean that children are compelled to remain at school longer and therefore reach grades VII and VIII in greater proportions than formerly. That this does not explain the improvement in 1924 over 1923 may be easily seen from the following:—

| Age .             | ige of<br>at at .                                                                                                                | Average (median)<br>Grade at each<br>age                                                                                         |                                                                                      |                                                                                      |
|-------------------|----------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------|
|                   | 1923                                                                                                                             | 1924                                                                                                                             | 1923                                                                                 | 1924                                                                                 |
| 5 years and under | 0·59<br>6·00<br>10·39<br>11·78<br>11·28<br>10·30<br>9·82<br>9·27<br>8·93<br>7·92<br>6·43<br>3·71<br>1·89<br>0·95<br>0·39<br>0·19 | 0·51<br>6·04<br>10·35<br>11·31<br>11·52<br>11·21<br>9·85<br>9·54<br>8·38<br>7·84<br>5·99<br>3·59<br>1·83<br>0·87<br>0·39<br>0·13 | 1·30<br>1·45<br>1·68<br>2·43<br>3·31<br>4·11<br>4·95<br>5·80<br>6·56<br>7·53<br>8·24 | 1·50<br>1·52<br>1·73<br>2·52<br>3·42<br>4·28<br>5·13<br>5·97<br>6·87<br>7·76<br>8·50 |

It is clear then that the year's increase in the proportion in the upper grades was not due to older pupils in 1924. The average (mean) age of each grade does not show the whole truth because an upper grade might appear older in 1924 than in 1923 for the very reason that there was a greater proportion in that grade. The average (median) grade at each age, however, shows a decided advancement in 1924. The improvement is, therefore, not merely a gathering in of older pupils which might be merely incidental to peculiar conditions in a certain year; it would seem, rather to be deeply rooted. It is not difficult to believe that the higher standing of the pupils leaving school at 15 in 1924 is intimately connected with this advancement in grade from age to age. Among many causes of the improvement in 1924 there is little doubt that the increased percentage in average daily attendance is a most important one.

Secondary Education.—The high proportion of  $9\cdot 13$  c. of the total enrolment in secondary grades has already been mentioned. The absolute number in grades IX to XII increased from 12,262 in 1923 to 13,446 in 1924. The distribution of these by grade in 1923 and 1924 was:

| P. C. of Grades IX to XII |              |      |
|---------------------------|--------------|------|
|                           | 1923         | 1924 |
| IX                        | 45.7         | 43.8 |
| X                         | $30 \cdot 3$ | 30.4 |
| XI                        | $18 \cdot 2$ | 19.4 |
| XII                       | 5.8          | 6.4  |

The increase in high school grades in 1924 was, therefore, partly due to an increase in the proportion completing high school work instead of dropping out after completing one or two years.

A revised course of studies was introduced into grade IX in 1923 and into Grade X in 1924. Under the present regulations students in these two grades are required to secure fifty per cent in each subject in order to be granted credit. Six units of work are considered a minimum requirement for grade IX and seven for grade X, and students are permitted the choice of certain options in the subjects selected. It is anticipated that the new course will be introduced into Grade XI and XII during the year 1925-26 in which case a student may obtain matriculation to the provincial university or entrance to normal school on the basis of twenty-one units of work selected according to the requirements of the revised course.

The inspector of high schools reports that the introduction of the new course has rejuvenated the study of the Language subjects, there being a marked increase in the number of students selecting the Language options. It will be seen in Table 0000 that this revival in language subjects seems to be prevalent in other provinces.

Teachers.—The number of teachers in elementary and secondary schools in 1924 was 5,727—1,463 male and 4,264 female. The distribution by class of certificate was 1,561 first class; 3,537 second class; 331 third class; 193 permits; 58 pending (that is, with certificates from other provinces) and 47 special, such as manual training, domestic science, etc.

Teachers in Training.—Over 600 students received certificates from the two normal schools. of which the total enrolment was 616.

Summer School for Teachers.—The twelfth season of the summer school for teachers was held at the University of Alberta from July 2 to August 5, 1924 with an attendance of 331 teachers in the courses put on under the direction of the Department of Education.

Rural Schools.—During the year 1923-24 there were 68 graded consolidated schools with 172 rooms and 6,527 pupils. Over and above consolidated schools were 80 rural graded schools with 175 graded classrooms and 5,831 pupils. In 2,741 ungraded schools were 67,453 pupils. The percentage of attendance of the enrolment in ungraded schools was 68.39 as compared with 65.12 in 1923. In these ungraded schools 1,701 pupils were taking work of high school grade while 4,910 were taking the work of Grade VIII.

It would seem to be very significant that the regularity of attendance in these ungraded schools has now passed the point reached even by all schools in old and long settled provinces a few years ago. Evidently the impetus imparted to the cause of education in many countries a few years ago. Evidently the impetus imparted to the cause of education in many countries during the post war years has affected all sections of this province. The amount of time lost by pupils in ungraded schools while these schools are open seems to be not as great now as that lost by graded schools up to 1920. The difficulties of the ungraded schools do not seem to have as yet disappeared. The average number of days in 1924 attended by pupils in ungraded schools was 117 as compared with 151 in graded schools. The reason for this is the large number of ungraded schools open less than the full year in outlying districts, also, to some extent, by new schools opening at various dates after the beginning of the school year. The average number of days the schools were opened was 174.76 in ungraded and 192.80 in graded schools. The short-area in ungraded schools is mostly caused by the outlying districts which are still under nigneering age in ungraded schools is mostly caused by the outlying districts which are still under pioneering conditions so that it is not likely that the status just mentioned is typical of the ungraded schools in settled parts. The efforts of the province to relieve the situation in these outlying districts may be seen in the various provisions of the schools Acts and their Amendments. A recent experiment inaugurated in 1923 took the form of giving correspondence courses in ordinary school subjects to children living in lands not yet organized into school districts. The enrolment in 1924 had reached 350 including pupils from all the public school grades. The co-operation of parents in this experiment is, of course, essential. The experiment itself is worth more than a passing notice.

Agricultural, Industrial and other Special Studies.—The statistics of these activities may be seen in Section 7. The report of the Provincial Institute of Technology and Art, is to be found in Tables 138 seq.

Medical Inspection and Special Classes.—See Tables 100 and 108.

Higher Education.—See Section 12.

School Support.—The expenditure in education during the calendar year 1923 was \$11,863,567 (less promissory notes \$9,672,791) of which \$5,411,487 was in teachers' salaries. The receipts were \$12,037,394 of which \$1,117,023 was contributed by the government. The cost per pupil enrolled in ordinary schools was \$56.74, in average daily attendance \$79.01. (See page 90 for historical table of receipts and expenditure of Department; page 108 for financial statistics of the university, and page 110 for financial statistics of colleges).

#### BRITISH COLUMBIA

Summary of Enrolment in All Educational Institutions.—During the school year 1923-24 the enrolment in all educational institutions in British Columbia was 110,915. Of this enrolment 96,204 were in ordinary day schools (elementary and high); 719 in teacher-training institutes; 6,849 in technical and night schools; 72 in the school for the deaf and blind; 1,752 in the university; 2783 in colleges; 940 in private business colleges reporting; 1,091 in private elementversity; 2783 in colleges; 940 in private business colleges reporting; 1,091 in private elementary and secondary schools reporting; 334 in a departmental summer school for teachers<sup>4</sup>; and 2,676 in Indian schools. The total enrolment in similar institutions during the previous year was 107,930. The year 1923-24, therefore, shows an increase of 2,985 or 2.8 per cent over the previous year.

There was an increase of over 7 p.c. over the enrolment of 1923 in high schools, about 2 p.c. in rural municipality elementary schools, somewhat less than 1 p.c. in rural schools while

the enrolment in elementary city schools remained practically stationary.

Including 80 students qualifying as teachers of Vocational Schools.

<sup>Including 411 in short courses.
Including 410 in Victoria colleges and 138 in other colleges. See page 101.
Including 140 in Victoria colleges and 138 in other students in the summer session of the university of
These were in addition to an enrolment of 300 teachers and other students in the summer session of the university of</sup> British Columbia.

Elementary and Secondary Schools.—The 96,204 enrolled in 1,115 elementary and secondary schools were accommodated as follows: 7,084 in 36 city high schools, 2,478 in 20 rural municipality high schools, 327 in 14 rural district high schools, 41,215 in 93 city elementary schools, 26,230 in 199 rural municipality elementary schools and 18,370 in 700 rural district elementary schools. Besides the high schools should be mentioned 53 superior schools and rural schools giving high school instruction with an enrolment in high school grades of 246. The superior schools are schools which teach high school work and the upper elementary grades.

Average Daily Attendance.—The average daily attendance was 79,262, an increase of 1,510 or about 2 p.c. over that of 1922-23. This attendance formed 82·39 p.c. of the enrolment which is the highest in the history of the schools in the province.

Grade, Age, etc.—For the first time this report contains statistics of the grade, age and sex of the pupils of British Columbia, which statistics are to be found in Tables 21, 43 and 61. The Department's data are particularly interesting in view of the fact that the ages are given by half years and the grades by semi-annual classification. The Department of Education in collecting and compiling these statistics used the classification (elementary grades I to VIII and high school grades IX to XII) which is now prevalent in Canada and the United States. The tables supplied are probably the first of their kind on a province wide scale, surveys of cities such as Winnipeg, Manitoba, approximately along the same lines having been made from time to time. The data as furnished by the Department are easily convertible into the form now supplied by seven other provinces and are shown in the same form as the other age-grade tables in Table 21.

Teachers.—The number of teachers in elementary and secondary schools in 1924 was 3,211—779 males and 2,432 females. Of these 128 were in high schools; 923 in city elementary schools; 660 in rural municipality schools; and 721 in regularly organized assisted rural schools. The classification of these teachers was: 526 academic; 717 first class; 1,516 second class; 235 third class; 40 temporary and 177 special. The male teachers increased by 50 or about 7 p.c. over the previous year. An increase of 5 academic and 89 first class certificates and a decrease of 62 third class and 43 temporary continue the trend in teachers' classification mentioned in last year's survey. The teachers' Bureau, organized in connection with the Department of Education in 1923 continued to give free service to boards of school trustees and to teachers. Over 600 teachers were placed in communication with school boards by means of a list of vacancies distributed from time to time.

Teachers in Training.—In all, 639 students (109 men and 530 women) were enrolled in the two Normal schools at Vancouver and Victoria. In addition, 55 university graduates took the

teacher-training course to qualify for high school teaching.

The fifth summer session of the University of British Columbia was held in Vancouver in July and August. About 300 teachers and other students were in attendance. A summer school for teachers was held in Victoria at the same time. Twenty courses were offered with thirty-three teachers in charge. There were in attendance 334 teachers, the majority of whom were from rural districts. A demonstration school of five divisions with an enrolment of 160 pupils was organized. The pupils comprise for the most part those who had been reported at the end of June as scarcely ready for promotion. In so far as possible the teachers in charge gave special attention to the subjects in which the children were backward. The additional instruction enabled pupils to obtain promotion in September. This feature was, of course, only incidental, to the real purpose of organizing the classes namely to provide a means of demonstrating to students and teachers approved methods of presenting the various subjects.

Agricultural, Technical and Other Special Education.—During the year the usual activities conducted under the Branch of Elementary Agricultural Education were maintained—namely, instruction in agriculture in high and superior schools, agricultural nature studies in elementary schools, extension short courses in agriculture given as night-school courses during the winter months and the planning and improving of school grounds. Altogether 516 students in twelve schools were enrolled in the regular two-year course in agriculture during the year. Night schools were conducted in thirty-six cities and in rural municipalities in the province with a staff of 205 teachers and an enrolment of 5,044 students. Instruction by correspondence was given to 249 pupils who lived in localities in which schools have not yet been opened and to 152 coalmine workers who wished to qualify as shot-lighters, etc. The enrolment in technical day courses was 1,653. There were also 79 manual training and 51 domestic science centres with an attendance respectively of 14,150 and 11,193 pupils. Classes for teachers training in technical subjects were held on Saturdays in Vancouver and Victoria.

Medical Inspection and Special Institution and Classes.—The school for the Deaf and Blind at Point Grey in 1924 had an enrolment of 72 pupils, 54 of whom were deaf, 16 blind and 2 deaf and blind.

Higher Education.—(See report of university and colleges, section 12.)

School Support.—During the year 1924 the expenditure on education was \$8,196,697, of which government grants, including \$458,125 the annual grant to the provincial university, amounted to \$3,173,395. The amount paid in teachers' salaries, including \$211,574 to vocational teachers, was \$4,519,262.

### CHAPTER III.—MISCELLANEOUS NON-PROVINCIAL ACTIVITIES

Division of Child Welfare, Dominion Department of Health.—A Department of Health was created by an Act of the Dominion Parliament in 1919. A deputy minister and an assistant deputy minister were appointed in September of the same year and medical services formerly under the direction of other departments were transferred to the New Department of Health, each service becoming a division of the new ministry under a chief. Certain new divisions were also created, the first of which was the Division of Child Welfare organized in 1920. In accordance with the letter and spirit of the whole Act which strictly recognizes the autonomy of the provinces in matters pertaining to public health, the plan of work and general policy of the Division of Child Welfare is co-operation with all provincial authorities carrying on child welfare you have a complete the province of the province welfare work and with all voluntary organizations carrying on or interested in this work. A direct channel for such co-operation and inter-communication is offered by the Dominion Council of Health also created by the aforementioned Act. The aim of such co-operation is to assist workers to obtain the best results and to secure general unity of purpose and harmony of method so far as these can be applied. Of special bearing on education is the plan to co-operate with ministers and departments of education in reference to the promotion of school hygiene, medical and dental inspection of schools, provision of school nurses, the special care and training of children needing special care and the instruction of teachers in normal schools on principles and methods of child welfare. Among other subjects receiving the attention of this Division are the following: children's courts, diseases of childhood, education and illiteracy, immigrant child welfare, morals and manners, nutrition and feeding, recreation, and women and children in industry. Among the publications of the Division is the Handbook of Child Welfare Work in Canada, issued in 1922. The first publication was the Canadian Mother's book issued in 1920. It may be interesting to know that this has since been translated into Ruthenian. regular publications of the Division consist of three series of "Little Blue Books" The Mother's Series; The Home Series; and the Household Series. (Chief of the Division, Dr. Helen MacMurchy, Department of Health, Ottawa.)

Technical Education, Branch of the Department of Labour.—The Technical Education Branch of the Department of Labour administers an Act under the terms of which the sum of \$10,000-000 was made available for the payment of grants to the provincial governments for the purpose of promoting technical education in Canada during a ten-year period. The amount set aside each year varies from \$700,000, in 1919 to \$1,100,000 in 1924 and remains fixed at this amount until the expiration of the Act in 1929. The yearly appropriations are allotted to the provinces by setting aside \$10,000 for each province and dividing the remainder in proportion to poplation. Grants amounting to one-half of the approved provincial expenditures are paid quarterly; thus the Dominion Government shares equally with each provincial government all expenditures on secondary vocational education. The work assisted includes pre-vocational or junior high school courses, technical, industrial, commercial, home-making and applied art courses in secondary schools, part-time and continuation classes for apprentices and employed adolescents, short term courses for adult workers, evening classes for adults and correspondence instruction for workers in isolated districts. Agricultural education is not included because it was provided for under a separate Act which expired in March, 1924.

During the five years in which the Act has been in operation the Dominion Government has paid \$3,024,130.64 in grants to the province. This financial aid has stimulated the development of vocational education and enabled the provinces to carry out programmes which would have been cancelled or indefinitely postponed as a result of post war financial conditions. The growth of the work is indicated by the fact that the number of municipalities conducting day vocational schools has doubled since 1919 and the enrolment in these schools has increased from 8,512 to 20,527. The total enrolment in day, evening and correspondence classes for the year 1924 was 79,829 distributed amongst 156 municipalities and school districts. (For Statistics see Tables 97 and 98. Director A. W. Crawford, Department of Labour, Ottawa.)

Indian Education.—During the year ended March 31, 1924, there were in operation a total of 324 Indian schools, of which 242 were day schools, 73 residential and 9 combined public and Indian. The total enrolment for the year was 13,872 pupils, of whom 6,896 were boys and 6,976 were girls, being an increase of 149 over 1923. The enrolment was distributed as follows:—Day Schools, 8,031; Residential Schools, 5,673; and Combined, 168. The average attendance was 9,188, or an increase of 82 over the preceding year. In addition, there were about 130 Indian children being given secondary education in high schools and private institutions throughout the Dominion. The 324 Indian schools in operation during the year were conducted under the following auspices: Undenominational, 49 Day and 9 Combined; Roman Catholic, 78 Day and 39 Residential; Church of England, 70 Day and 21 Residential; Methodist, 39 Day and 6 Residential; Presbyterian 5 Day and 7 Residential; and Salvation Army, 1 Day School. The expenditure for Indian Education from Parliamentary Appropriation for the fiscal year ended

March 31, 1924, was \$1,943,486. In addition to this, various bands of Indians contributed \$87,915 towards the payment of teachers' salaries, etc. (Superintendent, Russell T. Ferrier, M.A., Department of Indian Affairs.)

The Boy Scout Movement in Canada.—The Boy Scout Movement originated in England in the fall of 1907, and was incorporated by Royal Charter in 1910. It found a footbold in Canada almost as soon as Sir Robert Baden-Powell had finished his book "Scouting for Boys" in 1907. It was incorporated in Canada by an Act of Parliament in 1914, and at the end of that year there were fourteen thousand Scouts in Canada. Since then the numbers have increased rapidly and to-day there are in Canada over forty-five thousand Boy Scouts and Wolf Clubs.

The movement is organized in each Province under a Provincial Council with national headquarters at Ottawa. The Chief Scout for Canada is His Excellency Lord Byng of Vimy. The chief executive officer in the movement is the Chief Commissioner for Canada Dr. James W.

Robertson.

The essential features of the Scout system are the emphasis placed on the word honour, the responsibility of Scouts through their own Court of Honour, and the patrol system. The key activity is woodcraft and in all its aspects Scouting is supposed to be a game. The movement is inter-national and embraces all creeds and classes. (For statistics see Table 106. Chief Commissioner, Dr. J. W. Robertson, Ottawa.)

Canadian Association of Child Protection Officers.—At the close of the National Conference on Child Welfare in 1920, two or three Provincial Superintendents of Neglected Children and one Juvenile Court Judge gathered together and discussed the possibility of forming a separate association from that of the general council on Child Welfare in order to direct more specialized attention to the questions of neglected, dependent and delinquent children. As a result of this discussion a group composed of Juvenile Court Judges, Provincial Superintendents of Neglected Children, children's aid officials, and officials in charge of industrial schools, shelters, etc., met at the Parliament Buildings, Winnipeg, on October 5th, 6th and 7th, 1921, this being the first meeting of the Canadian Association of Child Protection Officers. The second annual meeting was held in Toronto in September, 1922; the third in Winnipeg in September 1923, and the fourth in Toronto in June 1924. At the present time there are about 40 members on the membeship roll.

The objects of the Association as declared in its constitution are:

First—The discussion of questions involved in the administration of laws relating to the protection and care of children.

Second—The securing of uniformity in these laws and in the methods of their administration and enforcement so far as advisable.

Third—Co-operation between departments charged with the administration and enforcement of these laws, and with other agencies operating in the field of child welfare. (Secretary—Judge Ethel MacLachlan, Regina, Saskatchewan).

Canadian Council on Child Welfare.—The Council originated in a large consultative conference called at Ottawa by the Federal Government in October, 1920, as a result of recommendations from practically every National Child Welfare agency in the Dominion. At this, and a subsequent meeting in May, 1921, the constitution and aims of the Council were agreed upon. The purpose of the Council, as set forth in the constitution is to promote in co-operation with the Child Welfare Division of the Federal Department of Health, and other agencies, the general aims of the council: by annual deliberative meetings; by activities of subsections of memberships on Child Hygiene, Child Industry, Recreation and Education, the Child in Need of Special Care and the Spiritual and Ethical Development of the Child; by affording a connecting link between the Child Welfare Division of the Department of Health and the Council's Constituent bodies; and by such further developments of the general programme of Child Welfare as may be recommended from time to time by the executive or any sub-committee thereof.

The Council at present is composed of eighteen national, and eleven provincial and 13 municipal associations interested in child welfare effort, also of individual members. The executive consists of representatives of each of these constituent bodies. The governing council also includes the chairmen of the five subsections under which the work of the Council is carried on. Each of these sections advises on the particular problems within its field, provides the sectional programme of the annual conference and assumes responsibility for publications on its phases of

the general problem.

The Council is supported by membership fees and by a grant from the Federal Government. Activities so far have been restricted to the Annual Conference; to educational lectures by its officers; to publication of articles in the popular press; and to publications on various phases of the Child Welfare problem. The question of surveys on the two specialized fields is under consideration. A large general correspondence on Child Welfare propaganda, and advisory research, statistical and legislative work in response to special request is also undertaken. (Hon. secretary, Miss Charlotte Whitton, M.A., Plaza Building, Ottawa.)

Canadian Girl Guides.—The Girl Guide movement was founded by Sir Robert Baden-Powell, the Chief Scout, to afford an attractive scheme of work and play whereby girls should

receive a special training in character and efficiency. The training tends in four main directions: (a) character and intelligence, (b) skill and technical knowledge, (c) service for others, and practices planned for the purpose. Development of the individuality of the girl is one of the

essential points.

The movement is designed to help parents and teachers in their task of education for good citizenship. It is non-class non-political and inter-denominational. A Guide on enrolment promises (1) to be loyal to God and the King (2) to help others at all times, (3) to obey the Guide Law.

The Guide Law is:-

1. A Guide's honour is to be trusted.

2. A Guide is loyal.

3. A Guide's duty is to be useful and to help others.

4. A Guide is a friend to all and a sister to every other Guide.

5. A Guide is courteous.

6. A Guide is a friend to animals.

7. A Guide obeys orders.

8. A Guide smiles and sings under difficulties.

9. A Guide is thrifty.

10. A Guide is clean in thought, word and deed.

Guides were first organized in Canada in 1910. The Canadian Council of the Girl Guides Association was formed in 1912, and incorporated by Dominion statute in 1917. The Chief Commissioner for Canada is Mrs. H. D. Warren of Toronto, and the Canadian Guide Head-quarters are at 22 College Street, Toronto.

The movement now has four distinct branches: Brownies for girls 8 to 11, Guides for girls 11 to 16. Papears and Sea Cuides for girls over 16.

11 to 16, Rangers and Sea Guides for girls over 16. In December 1924, there were 490 Guide Companies; 177 Bownie Packs, 23 Ranger Companies, and 3 Sea Guide Companies active in Canada. Each company or Pack manages its own funds but makes no contribution to Head-quarters. The Canadian Council Girl Guides Association receives a grant from the Dominion Government. For statistics see Table 105.

The Canadian Red Cross Society.—The organization of the Canadian Red Cross Society is in general patterned after the form of the Government of Canada and is, therefore, quite as demo-cratic as is the Government of the country itself. The form of the work carried on in each Province depends both on the need of the Province and the special form which the Provincial Department of Health finds Red Cross assistance most helpful.

During 1923 the average senior membership throughout Canada was approximately 86,000 and the Junior membership 85,000.

Nursing and Medical Services.—The establishment of courses for the training of Public Health Nurses, found so necessary when the Society began its peace-time work, has in certain cases been adopted as part of the regular work of the University. Training courses in public health nursing have been established in five universities as a result of Red Cross assistance and the demonstration of the need which the Society made possible has led to an extension of the University programme. During 1923 the public health nursing course at McGill University was financed by the Red Cross and scholarships were provided for similar courses at the University of Toronto and Dalhousie University in Nova Scotia. The Saskatchewan Division has made possible the establishment of a training course for Nursing Housekeepers in the University of Saskatchewan.

In certain provinces public health nurses have been placed under the Provincial Department of Health and have been used as community nurses to demonstrate the services which could be rendered in the regular inspection of school children and in visits to the homes of the people. This service has led to the support of such nurses by the municipalities and the province in many cases, and through their work many thousands of children are receiving the benefits of advice and in many cases, the parents are persuaded to have the physical defects of the children cared for, this leading to a general improvement in their health. The work of such nurses is, in part, a follow-up, service, in most cases, the children have already received medical inspection by a qualified doctor, and have had their defects pointed out.

The providing of community nurses for this demonstration work has met with considerable success in the Maritime Provinces in particular.

Nursing outposts have been established in outlying districts, especially in Northern Ontario and the prairie provinces.

A nursing outpost, as conducted by the Red Cross, soon becomes a health centre for the district in which it is established, and particularly in emergency and maternity cases it may perform the functions of a hospital. From it the nurse (or nurses) visits the homes, and, where necessary, the schools of the surrounding district and in this way is in a position to give advice on general matters of health.

The number of these outposts is increasing year by year. During 1923 there were 32 in

operation.

The Ontario Division made grants to the Ontario Medical Association to assist in carrying post-graduate medical education to the general practitioners of the province. More than 500 speakers have been sent out conveying the latest medical knowledge to all parts of the province. About 3,000 medical men have attended the meetings held and the good accomplished through them cannot be estimated.

The Canadian Tuberculosis Association received a grant of \$5,000 as a contribution to the demonstration at Three Rivers, Que., for the purpose of showing what can be accomplished in combating tuberculosis by intensive and continued good health measures and good health service for a period of about five years. This demonstration is conducted under the direction and supervision of the Health Department of the Province of Quebec.

Port Nurseries.—In co-operation with the Federal Department of Immigration and Coloniza-

tion, the Society conducts nurseries at the ports of Halifax, St. John and Quebec.

During 1923 the nurseries cared for 17,655 infants and children and follow-up cards were sent to Provincial Divisions for 3,109 families. This work has a high educational value for these immigrant families in giving them a welcome to Canada and putting them in touch with health agencies in their new localities.

Health Education Publications. The Society publishes two monthly magazines, one for seniors the other for junior members. The purpose of these magazines and of the educational leaflets issued by the Society is to present reliable health information in a simple manner understandable to the average reader.

Junior Red Cross.—The organization and activities of the Junior Red Cross in Canada are

dealt with in a separate report below.

One broad effect of all the general educational work of the Society is the gradual formation of a public sentiment in favour of public health measures, thus making it easier for the Governments to apply legislation for the betterment of the health of the people. The work which the Red Cross Society has done, or has made it possible for others to do, has helped the various provinces of Canada to make great progress in the Public Health work during the past four years. (General Secretary—Dr. Albert H. Abbott, Toronto.)

Junior Red Cross.—Junior Red Cross was begun in Canada early in the Great War, for the purpose of extending to children the privilege of participating in the humanitarian work of the Red Cross. So whole-heartedly did the children of Canada respond to this privilege, that to those who were closely in touch with the movement there came a realization of the altruistic forces latent in children, and as a result of this realization, action was taken to direct these

forces into the peace-time activities of the Red Cross.

With its traditions of unselfish service, and its national and international organization assuring permanence, the junior Red Cross is able to bring to any classroom a powerful motive. The function of the Junior Red Cross in the classroom is to arouse enthusiasm and a desire for good health, to open up a channel for effective service for other children who need help, and to afford a means of learning good citizenship through practice. It seems to supply an opportunity which is lacking under our present system where children are educated en masse,—an opportunity for the self-expression of each child. Those who have watched Junior Red Cross in operation can scarcely fail to recognize that it makes a powerful appeal to the spiritual forces in children, an appeal probably never equalled in scope, for even the Child Crusades was an insignificant movement compared to Junior Red Cross with its 8,000,000 members around the world.

Any boy or girl up to eighteen years of age who will accept the obligation of keeping the rules of the Health Game and of helping other children who need help, may become a member of the Junior Red Cross. In most of the provinces an annual fee of 25 cents is required. This must be the member's own money, either earned or saved. In some of the provinces, voluntary contributions are encouraged and no stated fee is required. Not one cent of the money raised by children is used for administration purposes. All the funds required to administer the Junior Red Cross in Canada are provided by the Senior Society. The money earned by Red Cross Juniors is used solely for helping other children.

The classroom is the unit of organization and the teacher is the local director of the group. In outlying rural districts, when it is impossible to organize a group, individuals may join as "lone members"

The statistics on page 72 show by provinces the membership and activities in Canada.

During 1924, the following Junior Red Cross material was prepared and sent out from National Office,-

- (1) Health Poster—" Playing The Health Game from Bed to Breakfast".
- (2) Revised edition of Bulletin No. 2.
- (3) Set of 42 lantern slides illustrating various Junior Red Cross activities in Canada.
- (4) The "Red Cross Junior"—a magazine for children published monthly except during July and August.

Three National Junior Red Cross exhibits were set up. One of these was exhibited by provincial divisions in Canada, one was exhibited by the British Junior Red Cross at Wembley, and the third was exhibited at the general meeting of the Canadian Nurses' Association, in Hamilton.

During the last year, international correspondence has become an important feature of Junior Red Cross in Canada. The first portfolio sent out of Canada was the one prepared by the Juniors of Central School, Vernon, B.C. This was received at National Office on January 18th, 1924. It was sent to Washington, for exchange with an American group, and was finally sent to a school in Newtonville, Massachusetts. The Society is now in correspondence with Juniors in Australia, New Zealand, South Africa, U.S.A., Great Britain, Belgium, France, Germany, Austria, and Poland. During 1924, it received 38 portfolios and 31 composite letters from other countries, and sent out 19 portfolios and 35 composite letters.

Undoubtedly, the close-up study of the habits, ideas, tastes, work and play of children in other countries of the world afforded through Junior Red Cross correspondence is of great educational value. The comradeship promoted through these "books of friendship" will undoubtedly go a long way to establishing friendly relations which one has the optimism to hope will be permanent. It is not beyond belief that the understanding of human values thus established among the children of the world will go a long way toward preventing future wars.

The Junior Red Cross is now organized in every province in Canada, and seems to be making substantial progress from year to year. (For Statistics, see Table 104.—Director: Miss Jean E. Brown, 410 Shelburne Street, Toronto.)

National Council of Education.—The National Council of Education was constituted at the National Conference on Education held at Winnipeg in 1919. The conference was a concerted attempt to rally the best public opinion behind the schools of the Dominion. As a result of this conference a council of fifty was appointed for the purpose of studying the important questions then raised and this Council reported to the Second Conference which was held at Toronto in 1923. The programme of the Council includes: 1, triennial conference (the next of which is to be held in Montreal in 1926); 2, the creation of a Canadian Bureau of Education controlled by an inter-provincial committee consisting of representatives of the different Departments of Education; 3, A National lectureship scheme; and 4, the provision of a children's magazine. A reference library of considerable size has already been formed. Surveys on the teaching of geography, history and literature were undertaken on behalf of the Council by the Universities of McGill, Toronto and Queen's respectively. These reports were published and presented at the Conference of 1923. (Executive Secretary, Major F. J. Ney, 607 Boyd Building, Winnipeg.)

Overseas Education League.—The conception of this movement was co-incident with the visit of the British Association to Winnipeg for its annual meeting in 1909, and an exchange of educational views and ideas which was purely informal at that time gave rise to a definite desire for a clearer understanding between Great Britain and Canada in matters educational. The outcome was the first organized visit of 165 Manitoba teachers to Great Britain during the summer vacation of 1910 under the auspices of an organization which subsequently received the title of the "Hands Across the Seas" movement. Having its inception in Manitoba, it speedily gained the co-operation of other provincial educational authorities, one after another giving it official recognition and support, with Ministers of Education as members of its Dominion Council and the Deputy Ministers as provincial presidents. In 1911-12 it received the endorsation of the governments of the Dominion of Canada and Newfoundland, and the addition to its Advisory Council of the Minister of the Interior for Canada and the Prime Minister of Newfoundland. The visit of 165 teachers to Great Britain, Ireland, Northern France and Belgium in 1910 was followed by yearly visits on a larger scale. In 1912 the number of visiting teachers reachers 300, half of whom visited the Mediterranean, including Gibraltar, Malta and Egypt on a specially about the second of the way and the cially chartered vessel. The visit of 1914 was interrupted by the outbreak of the war, and the activities of the movement had to be suspended until 1920. During this first period of its existence—in addition to the beneficial results of travel to the teachers participating in visits across the seas—it carried into effect a scheme for the interchange of teachers for the period of one year between Canada and other parts of the Empire, the first interchange taking place in 1913, when there was an interchange between three teachers from Manitoba and New Zealand; and by arrangement with the London County Council, thirteen teachers from various provinces in Canada were placed in London schools. A magazine devoted to the furtherance of the ideals and aims of the movement was issued monthly commencing January, 1913. A sum of \$4,000 had been raised to open a residential headquarters for overseas teachers in London when the outbreak of war interrupted further operations. In 1920, upon the return to Canada of the founder and honorary organizer, Major F. Ney, M.C., after distinguished service in the Great War, the movement was reorganized: its executive body was reconstituted, and its title was changed to the Overseas Education League. In each provincial department of education, except the Maritime provinces and in that of Newfoundland, a member of the staff was appointed provincial secretary of the Overseas Education League with the deputy minister as a member of the executive committee and the minister as a member of the advisory council. The scheme has been transferred to New Zealand, Australia and South Africa. In 1922 there were sent to

England 3 teachers from British Columbia, 4 from Alberta, 1 from Saskatchewan, 3 from Manitoba, 26 from Ontario, and one from Quebec, England sending about an equal number to each of these provinces; to Scotland, 3 teachers from Vancouver and 1 from Regina, Scotland sending 10 teachers to Canada; to New Zealand, 1 teacher from British Columbia, 1 from Manitoba and 1 from Ontario; to Australia, 4 teachers from Winnipeg, Australia sending 11 teachers to Canada.

In 1923, 1924 and 1925 a large number of exchanges were effected

In 1924 this Organization instituted a Tour for Canadian University Undergraduates to Great Britain and Europe, when 200 students from every Province enjoyed a tour similar to that arranged for Teachers. In 1925 the programme was repeated for 180 students.

\_\_\_\_\_ In 1925 a party of British Educationists visited Canada under the auspices of the Overseas

Education League, and travelled from Quebec to Victoria and back to Montreal, receiving at

all times the greatest courtesy and hospitality from the residents of this Dominion.

It is expected that both these tours will become yearly events, in addition to the tour for

Canadian Teachers.

The beneficial tendencies of such a movement can be readily recognized. Its objects, most of which may be gathered from the foregoing account of its activities, include: the furtherance of familiarity with educational systems throughout the empire, or, through the school, the furtherance of good relationship between the different parts of the empire; and the enlistment of a wider interest in the teaching profession. To these are added the perpetuation of the memory of those who died in the war. Its activities include: the organization of official visits of teachers to different parts of the empire; the provision of special facilities for individual travel in the pursuance of special courses of study; the arrangement of interchanges of teachers and school inspectors within the empire; the establishment of a residence in London, England, for teachers from overseas; and the publication of a magazine to further the objects of the League and to provide a medium of intercourse between teachers in different parts of the Empire. (General Secretary, Major F. J. Ney, M.C., 607 Boyd Bldg., Winnipeg, Man.)

Victorian Order of Nurses for Canada.—The Victorian Order of Nurses for Canada is a national organization founded under Royal Charter in 1897, at the time of the Diamond Jubilee, as a national memorial to Queen Victoria. The Countess of Aberdeen, wife of the Governor-General at that time, became its first President and much of the early success of the Order was due to her wonderful organizing ability and undaunted zeal. The Victorian Order having its origin, to a great extent, in the initiative of the Vice-Regal Party then in Canada, has had during its entire period of existence the patriotic and active support of all successive Vice-Regal Parties, each administration accomplishing something constructive and of importance to the advancement and development of the Order.

The Victorian Order carries on every phase of Public Health Nursing, which is defined in the Royal Charter as: "A branch of nursing service which includes all phases of work concerned with family and community welfare with bedside nursing as the fundamental principle, and developing from it all forms of educational and advisory administrative work that tends to prevent disease and raise the standard of health in the community."

The following activities are carried on in Canada to-day by the Order: Prenatal instruction; General nursing in the home; Maternity nursing in the home including delivery care; Child Welfare; Mothers' Conferences; Well Baby Clinics; Mothercraft Classes; School Nursing; Clinics for the correction of remedial defects; Health Centres; Hospital Work; Social Service; Industrial Nursing; Home Nursing and hygiene classes; General health education.

Field work is provided for Public Health Nursing students from the Universities and third

year students from Hospital Training Schools.

The nurses belonging to the Victorian Order are highly trained members of their profession. They are carefully selected graduates of recognized training schools who have also had post-graduate training in Public Health Nursing. Since 1921 the Central Board of the Victorian Order of Nurses for Canada has granted 86 scholarships amounting to \$34,400.00 to nurses who have since taken a full year's postgraduate course in Public Health Nursing at Universities

offering such courses.

The Victorian Order, by attracting and carefully selecting as it does, the highest type of Canadian womanhood, imbued with the ideal of service and equipped with technical knowledge, experience and culture, is an important factor in the national life of our country for the building up of sound Canadian citizenship. Through intimate contact with the lives of thousands of new settlers, the nurses of the Order are helping to bind these people to their adopted country making them Canadians in heart and outlook as well as in name. To them is given an unlimited opportunity to assist in the Canadianizing of the newcomer to our country; for, in the home, where these nurses do most of their work, the personal contact or touch thus afforded, is by far the most effective and far-reaching in its results.

The number of nurses on active duty at the present time is 273, and in 1924 a total of 561,567 visits were made. Of this number 320,000 visits, over one-half the total, were paid to maternity patients in their homes: one in every fifteen babies born in Canada being cared for at the time

of its birth by a Victorian Order Nurse.

There are 67 local branches of the Order. Each branch is managed by a Local Association which offers an efficient Public Health Nursing service best suited to the needs of the community. In each centre the policy of the Order is to co-operate with all other existing health agencies.

The Central Board at Ottawa acts in an advisory capacity, by means of its staff of administrative and supervisory nurses, directing and supervising the work throughout Canada, as well

as organizing new districts.

The bedside nursing service rendered by the Order is not a free service except to those who are in distress. A sliding scale of fees is adopted by each local branch, the maximum fee being equal to the actual cost of a visit. In this way expert visiting nursing service is offered to all who require it. A large part of the revenue of the Order is obtained from this source and is supplemented by grants, donations and subscriptions. Generally speaking each district finances itself, while the revenue of the Central Office is derived from the interest on an endowment fund of \$335,000, an annual grant of \$10,000 from the Federal Government, and \$2,500 from the Province of Ontario. The latter amount must be used, however, for specific purposes in Northern Ontario. (Hon. Secretary—W. D. Herridge, Jackson Bldg., Ottawa.) For Statistics see Table 107.

Frontier College.—The Frontier College, known formerly as the Reading Camp Association, originated in 1900. The purpose of its founder, Alfred Fitzpatrick, was to bring to the men of camps and to all workers in isolated places some of the advantages of the university. In pursuance of this he instituted the plan of sending university men to camps as labourers on the different forms of frontier works. These men, instructors they are called, engage during the day at the same manual tasks as the men among whom they are located. In the evenings and at spare hours they give educational instruction.

This work has extended to all the provinces. Since its inception more than eight hundred men from the different universities of Canada, as well as some from American institutions, have acted as instructors for the Frontier College. Each year sees an increasing number of graduates and research students engaging in this work. During 1924 a staff of fifty-two was distributed throughout the Dominion in camps along railway construction, on hydro development, in the

woods, and on other frontier works.

While the actual instruction imparted is usually of primary and secondary grade, there are times when university studies are also pursued. To meet the needs of men and women, largely in frontier places, otherwise deprived of educational facilities, the Dominion Government in 1922 granted the Frontier College a charter with powers to confer degrees in Arts.

The Frontier College is now in a position to offer definite courses of study, some of them leading to a degree. An effort has been made to adapt all such courses to the needs of those who by their environment are precluded from taking advantage of the opportunities for higher

studies already existing.

Through the co-operation of representative men from practically all the Canadian universities, an examining board of nearly a score has been formed. (Principal, Alfred Fitzpatrick, M.A., Toronto).

#### CHAPTER IV.—HIGHER EDUCATION

The twenty-three universities in Canada may be classified as: six state controlled (universities of New Brunswick, Toronto, Manitoba, Saskatchewan, Alberta and British Columbia); four undenominational (Dalhousie, McGill, Queen's and Western), and thirteen denominational. Of the last mentioned, St. Dunstan's, St. Francis Xavier, St. Joseph's Laval, Montreal and Ottawa represent the Roman Catholic Church; King's College, Bishop's College and Trinity College represent the Church of England; Acadia and McMaster represent the Baptist Church; and Mount Allison and Victoria represent the Methodist Church. Victoria and Trinity are in federation with Toronto. King's College, formerly located at Windsor, Nova Scotia, removed to Halifax in 1922 and entered into federation with Dalhousie, restricting herself thereby to Theology, and freshman work in Arts. The financial statistics will show that the universities classed as denominational are in some cases subsidized by provincial governments. For this and other reasons they may be considered national institutions, although not state controlled in the strict sense of the term.

Table 126 of this report shows that the staffs of universities in 1924 consisted of 3,002 male and 450 female professors and instructors, of whom nearly two-thirds were on the staffs of three universities. It will be seen that the great majority of the female staff were in preparatory courses and the faculties of Arts, Pure Science, etc. As most of the preparatory courses are taken in affiliated colleges of which the registrations are in some cases included with those of the universities, the same being to a certain extent true of the Arts courses, the number of females on the regular staffs of universities is quite small. Relative to the males, the females show a

considerable decrease since 1923.

Table 129 shows that the registration of students was 39,375 or about the same as in 1923. Of this number about one-third were females. As in the case of the staff, the proportion of females was raised by the inclusion of preparatory courses, also by short and other miscellaneous courses. The number of females in regular courses was only 6,760 as compared with 17,872 males. This is a slightly smaller proportion than in 1923. The registration of students consisted of 6,606 in preparatory courses, 24,632 in regular and 8,137 in short, correspondence and other courses. The

corresponding registration in 1923 was 8,565 in preparatory, 24,847 in regular and 5,814 in short and other miscellaneous courses. Thus the regular courses have remained stationary, while the short courses have considerably increased. The apparent decrease in preparatory courses is due to the omission of the preparatory students in the report of one university which included these in the report of 1923. The complete list will be seen in the combined report of universities and colleges. This combined report will also show in a truer perspective the registration by faculties, since certain faculties, especially Theology and Law, are strongly represented by the colleges.

The chief feature of the year in registration of students, so far as universities are concerned, would seem to be the increase in short courses for others than teachers. The notes attached to the tables explain the nature of these short courses. A complete list of them was reported for the year, but they were of too miscellaneous a character to embody in the regular table. The follow-

ing is a summary of this list:

| Agricultural Courses                                     | 697   |
|----------------------------------------------------------|-------|
| Agricultural Courses                                     | 233   |
| Journalism                                               | 460   |
| Civies                                                   | 155   |
| Prospectors'. Business (Merchants', export Trade, etc.). | 975   |
| Medical                                                  | 45    |

| Summer Schools (Various Courses)                         | 374   |
| Freparatory (various Courses)                            | 01    |
| Total                                                    | 3,972 |

The corresponding number in these short courses in 1923 was 2,074 and while a part of the increase in 1924 may be due to more complete reports, it is certain that this part is not large.

Table 130 shows the number of degrees granted by universities in 1924.—3,683 first, and 1,448 graduate degrees. The combined number of first and graduate degrees probably gives a better idea of the situation, since some misunderstanding may have arisen as to what constitutes a graduate degree—for example, certain institutions may regard a professional degree as a graduate degree by virtue of the fact that the recipient has already been granted a degree in Arts or Science. The total number of degrees conferred, therefore, was 5,131 of which 2,177 were in Arts, pure Science, Letters and Philosophy; 756 in Medicine; 483 in Engineering and Applied Science; 376 in Music and 219 in Law. This gives a total of 4,011 in five faculties, while the remaining 1,120 degrees were divided among eleven faculties. The number of degrees in these five faculties. ties in 1923 was 3.810, each of the five faculties showing increases in 1924 except engineering, which showed a decrease of 184. Medicine showed an increase of 196 or about 34 per cent, while Arts remained practically stationary.

Table 128 shows the migration of students from one province to universities in other prov-

inces, also the attraction to Canadian universities of students from places outside of Canada. Students from other countries, among which were mentioned United States, Newfoundland, West Indies and the British Isles, attended Canadian universities to the number of 1,090, while 3,085 residents of Canada attended universities in other provinces than their own. (which gives only the students in regular courses) and table 129 show that of the 24,352 students in regular courses 23,260 were Canadians. These do not take into account a large number of

students in regular university courses in colleges.

Table 139 shows that in 1924 the assets of universities amounted to \$80,864,627, the income to \$10,541,784 and the expenditure to \$11,716,921. The excess of the expenditure over the income should not be misunderstood. In state-controlled universities it may happen that the Government grants to cover the expenditure of one year is counted in the income of the following year, instead of the year in which the expenditure was incurred. There is, therefore, little or no significance in the fact that the expenditure exceeds the income of that year. Of the total income rather less than one-fifth was in the form of fees, nearly one-sixth was in the form of investments, and about the same proportion was from other sources than government grants. About one-half was in the form of government grants.

The number of Canadian colleges of which reports were obtained for the year 1923-1924 was 79. In addition to these were three colleges of which recent statistics have been obtained and one which is known to be in operation but of which no recent statistics have been obtainable. This brings the total number of colleges known to be in operation and as distinguished from "private elementary and secondary schools" up to 83¹. Of the eighty-three colleges, 6 are agricultural, 2 technical, 2 law, 1 dental, 1 for pharmacy, 1 for veterinary science, 28 theological, 39 affiliated (of which 30 are separately grouped as classical), I school for higher commercial studies, I college of Art and I Military College. Such other institutions as are doing work only of elementary or high school grade, although sometimes known as "colleges", are reported under "private elementary or secondary schools". There are other institutions which do work of professional or university grade, such as the polytechnic school, the schools of Fine Arts, etc. in Montreal and Quebec. Although these in a sense are separate entities, they really form parts of universities and are consequently not listed separately, with the exception of the school for Higher Commercial Studies and Oka Agricultural College which are really parts of the univer-

<sup>1</sup> St Boniface College, affiliated with the University of Manitoba, which will be included in the next issue, brings the number up to 84.

sity of Montreal; Ste. Anne Agricultural College, which forms a part of Laval University, and

Macdonald College, which is a part of McGill university.

The term "Affiliated" colleges is not necessarily used in its strictly technical sense since properly nearly all the 83 colleges are affiliated in the ordinary sense. The term "Affiliated" in the following tables is applied to institutions devoted mainly to academic work leading to a degree in Arts. It is, of course, not possible to effect a complete separation between "affiliated" and the other colleges and the term is used merely provisionally. Table 133 shows fully the nature of the work done in each institution. It will be seen that some work in theology, for example, is done in "Affiliated" colleges and some work in Arts is done in theological colleges. Each college had to be listed under its main function.

There should be no misunderstanding as to the term "Secondary" in tables 136 and 137 as applied to Classical Colleges and certain other institutions in Quebec. "Secondary" education in Roman Catholic education in Quebec includes the four years in Arts as well as the high school, work which in other colleges is classed as "preparatory courses". This applies especially to "Classical education" (see table 136). Since the data for these classical colleges are not given in the same detail as those for other colleges it should be mentioned that the number of regular Arts students in these in 1924 was 1,022 in the little seminaries and classical colleges affiliated

to Laval and 1.146 in those affiliated to Montreal.

Table 131 of this report gives a fairly full list of colleges without regard to classification, with the numbers of staff and students. It shows that the number of students registered in 1924 was 21,307 excluding the registration of one institution which at present does the work only of a secondary technical school. Adding the registration of this institution and the latest statistics of three other colleges brings the approximately full registration of colleges up to 22,592.

Table 132 shows the classification of the colleges according to their main function and their registration by provinces. In this table it is to be seen that the 21,307 students in 1924 were distributed among the classes of colleges as follows: affiliated (including classical) colleges, 12,446; agricultural, 3,460; theological, 2,037; technical, 823; law, 447; dental, pharmacy and

veterinary, 751, and miscellaneous, 1,343.

Tables 133 to 136 show the registration of students by faculties according to the class of college. In this case it was not possible to give the distribution of all the 21,307 according to faculties in one table. Combining the data of the four tables a summary of registration by faculties may be given as follows: Courses preparatory to arts, etc. (high school grade work) 5,667; undergraduate courses in arts, pure science, etc., 2,914; graduate courses in arts, etc., 453; agriculture, 845; theology, 722; domestic science, 680; dentistry, 485; law, 447; commerce, 2,159, of whom 325 at least were in commercial courses of university grade; applied art, 413; music, 275; education, 260; engineering, 229; pharmacy, 144; veterinary medicine, 69; medicine, 8; short courses, 3,548 including 1,109 in short courses for teachers and 2,439 in short courses for others; correspondence courses, 1,079; and all others, 4,378 of whom 3,617 are known to be in Secondary technical courses and are not included in the total of 21,307, and 614 are known to have been in classical institutions but whose courses and grade of work are not known. The numbers of students thus given by courses amount to 21,658 instead of 21,307 and the difference of 351 is due to the fact that some students take more than one course. The relative numbers in the different courses have no great significance since certain courses are taken mainly at the universities of which many of the colleges are mere adjuncts. The true relationship between the numbers in courses will be shown in table combining the data of universities and colleges. It will be seen in that table that the great bulk of students in preparatory courses in universities and colleges are taking these courses at the colleges although they are also included with the registration of the universities.

Table 140 shows the financial statistics of the colleges with the exception of the classical colleges and the superior independent institutions in Quebec, the financial statistics of these being included in table 122. It is noticeable that about one-half the income of the other colleges consists of government grants. This proportion is very misleading and it is mentioned merely to prevent the misconception which would arise in the mind of one reading only the items in the "Grand Total". Practically all the government grants are confined to state controlled and other technical institutions such as agricultural, technical, commercial, etc. colleges. Deducting the figures of these institutions and leaving only the figures of theological and affiliated institutions. tutions which comprise the great bulk of the colleges it is seen that out of a total income of \$687,410 only \$1,200 was in government and municipal grants, while \$139,366 was in investments, \$187,835 in fees and \$359,009 in other sources such as congregational voluntary support of theological colleges, etc. It is suggested therefore that in this financial table which shows the statistics of individual institutions and is given for that purpose only, grand total figures are of no value without a careful reading of the remainder of the table. Another table showing the financial statistics by class of institutions will be given in its proper place, the combined report

of universities and colleges.

The real drift of higher education cannot be seen from the statistics of universities and colleges given separately inasmuch as some of the universities include in their registration the registration of their affiliated colleges, while others do not. Again some of the colleges are not in affiliation with any university except in the sense that there is an agreement or understanding in the matter of courses etc., so that the standing of the students of the one is recognized by the other without further examination. In most cases it is not difficult to correct for duplicate

registrations between universities and colleges. Indeed some universities include the registration of all their affiliated colleges, so that it is known that the registration of the latter is not to be added to give a sum total. Other universities exclude the registrations of their colleges so that obtaining the grand total is equally simple. Difficulties arise in the case of a few institutions only. For example, some theological colleges offer certain courses which are recognized as part of an Arts course or else recognize certain arts subjects as part of the theological curriculum. In either case students preparing themselves for divinity might register in the arts work and in divinity at the same time. The number of students thus involved, however, is very small, and practically all are specifically mentioned by the institutions at which they are registered.

Table 142 gives the students by faculties in both universities and colleges. As the list of institutions is more complete than in any previous report the numbers in preparatory, theology and certain miscellaneous courses are not strictly comparable with former figures. Including the same institutions as in the report of 1923 the number of students by faculties in 1923 and

1924 compare as follows:-

|                                              | 1924   | 1923   |
|----------------------------------------------|--------|--------|
| Undergraduates in Arts, etc                  | 12,287 | 11,630 |
| Medicine                                     | 2.941  | 3,210  |
| Engineering and applied science <sup>1</sup> | 2,235  | 2,494  |
| Graduate courses                             | 1,878  | 1,511  |
| Theology                                     | 1.535  | 1,564  |
| Agriculture                                  | 1.214  | 1,353  |
| Household Science                            | 1.084  | 1,085  |
| Education                                    | 1.078  | 1,057  |
| Music                                        | 1,066  | 1,434  |
| Law                                          | 930    | 953    |
| Dentistry                                    | 890    | 1,175  |
| Commerce                                     | 887    | 853    |
| Dharmory                                     |        | 299    |
| · Pharmacy                                   | 505    | 517    |
| Social Service.                              | 499    | 510    |
| Nursing                                      | 158    | 153    |
| Forestry                                     | 89     | 93     |
| Veterinary Science                           | 88     | 103    |
| Short courses for teachers                   | 1,835  | 2,647  |
| Short courses for others                     | 6,073  | 3,533  |
| Correspondence courses                       | 2,941  | 1,768  |
|                                              |        |        |

<sup>1</sup> Including Architecture.

It is noticeable that increases over 1923 are shown only in the cases of undergraduates in etc., graduate courses, Education (very slight), Commerce, Nursing, Correspondence courses and Short courses for other than teachers, while decreases,—and, in some cases, marked decreases—are shown in all other faculties. The increase in correspondence courses is quite marked and more so that in short courses for other than teachers. A list of the latter courses has been given on page xliv. It may be mentioned in connection with the increase shown higher commercial courses, that included in the 5,260 in "all other courses" Table 135, there are at least 2,159 in commercial courses taken at the Classical colleges. These courses are probably of secondary grade and have not been listed under "commercial courses" solely for the reason that they are not comparable with the course of the School of Higher Commercial Studies in Montreal, for example. The corresponding number in the commercial courses in classical colleges in 1923 was 2,436, showing a decrease in 1924. The increase in commercial courses shown in the above list is, therefore, not significant. What seems to be of peculiar significance is the increase in the straight academic university grade courses (undergraduate or graduate) and the decrease in practically all the other courses. In this connection it may be worth mentioning

that for the last two or three years a similar process has been going on in the high schools.

As was pointed out in the Survey of Education in Canada for 1923, there would seem to be evidences of increasing attraction to ancient and modern languages and other purely academic subjects, and a falling away from subjects with a directly practical bearing. It is difficult to determine whether this is a psychological phenomenon or merely the result of present economic conditions. It would also be interesting to know whether it can be connected with the increasing practice of permitting high school pupils to select options from lists of subjects prescribed by the departments of education instead of the old method of requiring them to take a certain number of "obligatory" subjects.

Table 141 gives the combined financial statistics of universities and colleges, the items for universities being given separately for state-controlled undenominational and denominational, and those for colleges being given separately for the different classes such as agricultural etc. One interesting feature is the different relationship between total income and fees in the different institutions. A part of this difference is explainable by the inclusion of receipts for board and lodgings in the fees of some residential institutions. The percentages which fees form of the total income were as follows:-

| Theological colleges                                   | 9        |
|--------------------------------------------------------|----------|
| Agricultural colleges. State controlled universities.  | 11<br>13 |
| Undenominational universities                          | 46       |
| Denominational universities. Affiliated colleges.      | 46<br>56 |
| Colleges of Dentistry, Pharmacy and Veterinary Science | 58       |
| Law colleges                                           | 82       |

The technical colleges are not included in the above list because the great majority of their courses are secondary, and, as in other secondary schools, their expenditure is defrayed largely by direct taxation which would in a sense correspond to fees. The proportion of the total income derived from investments is greatest in the case of denominational universities, next in undenominational universities and third in theological colleges. The relative sizes of the total amounts specified as current or capital expenditure are of little significance owing to the number of institutions which failed to specify these items.

Coming now to the total number of students in universities and colleges combined, this total is not the sum of the total registrations in universities (30,095) and in Colleges (21,307), inasmuch as there is a considerable amount of duplication in the registrations. In the last column in table 129— is given the number of students also registered in colleges, but some of these colleges are really preparatory high schools which have not been listed as colleges. As near as possible and within a very small margin of error the total duplications in the figures of Universities and the listed colleges is 7,763 leaving a net total registration in 1924 in the combined institutions of 52,639. Of this number 9,579 were in preparatory courses and 16,107 in correspondence courses, short courses and all the other courses. At least 2,000 of the latter were also registered in regular courses. This leaves a net total in regular courses of between 29,000 (the lowest limit) and 29,900 (the actual sum of the registration by regular courses, or roughly 29,500.

Of the total registration of 52,639 in Universities and colleges, 7,943 were specifically-mentioned as being under 18 years of age and this number corresponded fairly closely with the number in preparatory courses in these institutions. Although the students of higher institutions have not been reported by age, a fair idea of the proportions of adults and juveniles may be obtained from the proportion the students in preparatory courses form of the total registrations of 52,639. A fair estimate of the number of adults registered is, therefore, 43,000 (if the age of 18 be considered as the dividing line between juveniles and adults). This supplies an important item in calculating the number of adults being educated in Canada. A report on adult education giving some details of courses, etc., will appear at a later date, but it may be useful to give here a summary of the latest figures available on this subject. It will be impossible however, to adhere to the age of eighteen as the lowest limit. The ages of sixteen and seventeen as will appear in the context contain a large number of "school children" but over and above those specifically mentioned the nature of the work done by these ages may safely be regarded as adult education. The results will only be approximate, but the approximations will be fairly close.

| Registered in regular courses at Universities and colleges (1924)                             | 29,500          |
|-----------------------------------------------------------------------------------------------|-----------------|
| In short courses, etc.— in addition to those in regular courses (1924)                        | 13,660          |
| Above preparatory in three theological and affiliated colleges not listed with above (1923 or |                 |
| 1924). Evening courses in secondary technical schools (1924).                                 | 275             |
| Evening courses in secondary technical schools (1924).                                        | 53,080          |
| Correspondence courses in technical schools (1924)                                            | 978             |
| Summer schools for technical teacher training (1924)                                          | 290             |
| Normal schools for general school teacher training (1923)                                     | 9,578           |
| Summer schools for general school teacher training, not elsewhere included (1924)             | 460             |
| One dairy school (1924)                                                                       | 762             |
| Over eighteen years of age in public elementary and Secondary Schools (1923 or 1924)          | 3,000<br>18,468 |
| Over eighteen years of age in private elementary and secondary schools (1924)                 | 1,500           |
| Sixteen and seventeen in public elementary and secondary schools                              | 90,602          |
| Sixteen and seventeen in private elementary and secondary schools.                            | 2,253           |
| Sixteen and seventeen in classical colleges and independent schools.                          | 2,533           |
| Business colleges days and evening courses (1924).                                            | 18,322          |
| Correspondence schools not listed with Business Colleges (1923)                               | 1,290           |
| Night schools, Que, (1924)                                                                    | 1,321           |
| Night elementary schools Ontario (1923).                                                      | 2,093           |
| Night high schools, Ontario (1923)                                                            | 2,764           |
| Total (presumably over 16 years of age)                                                       | 252,188         |
| _                                                                                             |                 |

The above list includes such activities as Workers' Educational Association (in the registration of Universities). It also includes one system of correspondence schools in Canada. It also includes the Y.M.C.A. schools (under business colleges).

It does not include the Frontier College of which it is hoped statistics will be given in a full report on adult education. The registration of this college is probably not under 5,000 and may be much higher. Nor does it show the registration of certain private trade schools, nor that of the International Correspondence Schools which have a large registration nor does it convey any idea of the number of adults coming within the influence of public library activities. This number is, of course, not measurable.

The total number of adults in educational institutions in Canada without mentioning these library activities and without the registration of the International Correspondence schools is therefore, not far short of 260,000. This figure is correct within a reasonable margin of error and is near enough to convey an idea of the place of adult education in the educational system of Canada, which system enrols a total of about 2,200,000, over and above the enrolment in the already mentioned correspondence schools.

### CHAPTER, V.—PRIVATE SCHOOLS

Section 13 (tables 143 to 156) includes the statistics of two private schools: (1) elementary and secondary schools which do the same class of work as ordinary day schools under public control (that is, purely academic work); and (2) business colleges, the function of which is to give training in commercial subjects, the training being of a purely vocational nature. The distinction between the two classes is not always hard and fast, as may be seen in the table below, showing the subjects of study in the public and two kinds of private schools.

For the year ended June 1924 reports were received from 119 private elementary and secondary schools and 100 business colleges. The enrolment in the former was 15,437 (4,935 boys and 10,490 girls) of whom 3,934 (out of 12,171 reported by residence) were in residence; the enrolment in the latter was 18,322 (6,552 male, 10,280 female and 1,490 unspecified by sex). It is noticeable that there is a preponderance of the female sex in both classes of private schools, and that in the private elementary and secondary schools females are in a majority of almost two to one.

A comparison between the subjects of study taken at these schools and at public schools is very illustrative. In the 1922 report the number taking the different subjects in order of size in the different classes of institutions was shown. The following figures for 1924 retain the order of 1922 to show the changes since that year.

#### NUMBER TAKING THE FOLLOWING SUBJECTS, 1924

|                          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                                                                                                                                                                                                                             |                                                                                                                                                                                                                                                                                                                                                              | 0.2023-0.210                                                                                                                                                                                  | , 2023                                                                                                                                                                                                                                                                                                                                                                                                                     |                                                                                                                                                                             |

It is noticeable that in private elementary and secondary schools the order has not changed materially since 1922 except in the case of religious instruction which shifted from 25th to 7th place. Oral French has also shifted from 15th to 8th place, while elementary science made some headway. The insignificance of the position held by manual training, domestic science, commercial subjects and other practical subjects is remarkable. The position of the subjects in public secondary schools is especially interesting in view of the increasing tendency from year to year in the different provinces to offer electives. This tendency seems to be detrimental to mathematical subjects and favourable to history, French and Latin. In business colleges the size of each subject should be compared with the largest subject, spelling. If "correspondence" be regarded as training in English over and above the English Composition and literature it will be seen that these business colleges may be regarded as offering a considerable amount of academic training.

# APPENDIX.—SUMMARY OF EDUCATIONAL LEGISLATION IN THE DIFFERENT PROVINCES, 1924

#### PRINCE EDWARD ISLAND

The Public School Act.—Chapter 7 amends the Public School Act of 1920 in reference to certain points in connection with assessment of school rates; it also prescribes a penalty for disturbing school or school meeting.

#### NOVA SCOTIA

Education Act.—Chapter 24 amends the Education Act (Chapter 60, R. S. 1923) especially by enacting that if the trustees of any section neglect or refuse to provide school or teacher the Board of Commissioners may appoint new trustees; it also authorizes an inspector to appoint itinerant teachers to direct the instruction of pupils dwelling on islands or in sparsely peopled places which are not within any organized school section. For the purposes above mentioned every such island or place shall be deemed to be a school section and the inspector shall be deemed to have the powers of trustees of such school section. The salary of every such itinerant teacher shall be paid one-third by the municipality, one-third by the Provincial Treasurer and one-third by the parents and guardians of the pupils so instructed.

#### **NEW BRUNSWICK**

School Act.—Chapter 37 amends the Schools Act by authorizing the board of school trustees of any city and certain incorporated towns to pay retiring allowances to teachers and school officers for meritorious and long service, and to include the amounts required for such allowances in the assessment for yearly support and maintenance of schools. The amendment also legalizes any such retiring allowance heretofore made.

#### **OUEBEC**

Director of Protestant Education.—Chapter 33 amends the Revised Statutes, 1909 by providing that the protestant secretary of the Department of Public Construction shall under the supervision or control of the Superintendent be at the same time Director of protestant education in the province.

<sup>1</sup>Elementary School Fund.—Chapter 34 amends Article 2,947 R.S. 1,909 as amended by providing that until the elementary school fund produces a net yearly income of \$175,000, there shall be granted by His Majesty yearly the sum of \$250,000 (instead of \$200,000) out of the consolidated reserve fund.

Pedagogical Institute.—Chapter 40 provides for an annual grant for fifteen years of \$25,000 to the Dames Religieuses de la Congregation de Notre-Dame de Montreal to aid them to establish and maintain a pedagogical institute or superior normal school in the city of Montreal.

#### **ONTARIO**

School Laws.—Chapter 82 amends the School Laws in such matters as the apportionment of special grants for urban public and separate schools and of the general grant for rural schools on the basis of the value of property liable to school taxation, expenditure, etc. It also makes the exemption from school rates on account of distance from school inapplicable in the case of lands of non-residents, lands of residents in the section who have no children of school age, and lands of a consolidated school section. It also provides for special classes for blind or deaf and dumb pupils in cities of 100,000 population and over; it also makes certain provisions in respect of county grant for maintenance of county pupils at high school exceeds the amount apportioned by the Minister and the fees received, the council shall in lieu of the equivalent of the amount apportioned out of the legislature grant pay to the board a sum calculated on the basis of the proportion which the total days attendance during the next preceding three years of county pupils bears to that of the whole high school district plus the share of the cost of education of county pupils which the high school district paid to the county during the preceding year as included in the rates levied by the county, council according to the relative equalized value. It also authorizes the council of a county, etc., to enter into an agreement with the board of education or the high school board for the payment of fees of non-resident pupils attending a high school, collegiate institute or technical school. It also provides for admission of pupils of thirteen years of age and over who have been in attendance in auxiliary classes to special industrial classes established for vocational instruction to such pupils.

<sup>&</sup>lt;sup>1</sup> This is not the fund from which the ordinary grants to the elementary schools are paid but one which provides "Special" grants for school buildings, etc.

Medical and Dental Inspection.—Chapter 83 requires boards to provide for medical and dental inspection and to make other provision for the health of the pupils of the public or separate schools under their control.

University Act.—Chapter 85 amends the University Act by providing that eight out of the twenty-two members of the Board of Governors may be nominated by Alumni; it also empowers the University Board to acquire patents on inventions, etc., trade marks and copyright.

#### **MANITOBA**

Public Schools Act.—Chapter 49 enacts certain amendments of the Public Schools Act among which are the following:

Schools with average attendance of five children or less are not to be kept open during the ensuing term but the board shall make provision for the transportation of the children to other schools or provide for their living expenses in some other districts; municipalities are required to collect tax arrears in newly organized territory; the council of a rural municipality may make a grant to any school district maintaining a high school, collegiate department or institute in lieu of the non-resident fees payable by pupils resident in the said municipality and include the amount of such grant in the general levy. Certain legislative grants are provided in the case of rural school districts situated in rural municipalities where the average assessment per teacher for the municipality on the equalized basis is less than \$100,000 namely: to districts having an assessment per teacher less than \$10,000 the sum of \$2.25 per teacher per teaching day; \$10,000 and less than \$15,000, the sums of \$2.00 per teacher, per teaching day and so on (25 cents less for every \$5,000 increase).

In addition to all other grants there shall be paid to schools in unorganized territory the sum of \$1.00 per teacher per teaching day and if situated partly in unorganized territory a proportionate sum. None of the above grants are payable for any period exceeding 160 days.

#### SASKATCHEWAN

Secondary Education Act and School Assessment Act.—Chapter 23 makes certain minor amendments of the Secondary Education Act. Chapter 24 amends the School Assessment Act, defining proceedings in the case of neglect by ratepayers to pay taxes.

Education and Maintenance of Blind and Deaf Children.—Chapter 25 authorizes the Minister in charge of the Bureau of Child Protection to make an agreement with the government of any other province or with any society, etc., owning or controlling suitable institutions for the education of blind and deaf children.

#### ALBERTA

The University Act.—Chapter 15 amends the University Act in reference to refunding debentures and to borrowing under the provisions of the Provincial Loans Act sums to implement the provincial guarantee.

 $School\ Assessment\ Act.$ —Chapter 16 amends the School Assessment Act in refrence to methods of assessing, interest rates and penalties on unpaid school taxes, and to property liable to taxation for school purposes.

School Act.—Chapter 17 amends the School Act in reference to meetings of school boards, also by authorizing school boards to provide for attendance at school of children in lieu of conveyance, by other suitable means including payment to parent or guardian a sum not exceeding one dollar per day per family. It also authorizes the board of a district to charge for pupils in Grade XII a fee of \$4 per month if a non-resident.

¹ Unspecified by sex in N.B. 2,407. ² Including independent as well as other primary schools. Thesex was not specified separately for independent and controlled schools. ³ Including Day elementary and secondary schools; the latter include day vocational full time pupils. ⁴ Not including 338 in P. W. C. ⁵ Primary schools under control and independent. ⁵ The financial items in Ontario include day and evening vocational schools. To the number of teachers should be added 459 in day vocational schools. These were not classified by sex. ⁻ ''Districts'. The number of municipalities, was 1,764. ⁵ In existence. The number in operation was 1,851. ⁵ In existence Dec. 31, 1924. ¹¹ Approximately. ¹¹ Estimate only. There were 5,516 rural school sections; 24 Cities and 140 Towns with public and 25 Cities and 72 towns with separate schools; 160 Village public and 19 Village separate schools; 189 continuation schools and 183 high schools and collegiate institutes. Assuming that each city and town and each village school public and separate and each secondary school-represented a schoolsection, the total number of sections would be 6,326 as above. ¹² Exclusive of promissory notes. ¹¹³ From this should be deducted about \$8,500,000 on private schools, higher education, etc. ¹⁴ Exclusive of \$458,125 to provincial university. ¹³ Coff this amount \$8,200,040 was contributed by subsidized independent schools. ¹¹ Including Government expenditure or salaries of teachers of General schools and provincial colleges.

¹ Dont 2,407 au Nouveau-Brunswick dont le sexe n'est pas spécifié. ² Les écoles indépendantes y figurent avec les autres écolesprimaires; le sexe des élèves n'a pas été spécifié dans ces écoles. ³ Y compris les écoles du jour, primaires et secondaires; dans ces dernières figurent les élèves des cours professionnels y consacrant la totalité de leur temps. ⁴ A l'exclusion de 338 élèves du collège Prince of Wales. ⁵ Ecoles sous contrôle et indépendantes. ⁵ Les dépenses de la province d'Ontario s'appliquent aussi aux écoles professionnelles de jour et du soir. On devra ajonter au nombre des instituteurs 459 mattres et mattresses des écoles professionnelles de jour: leur sexe n'est pas spécifié. ¹ ''Districts'; le nombre des municipalités était de 1,764. ⁵ En existence; en fait, 1,851 seulement fonctionnaient. ⁵ En existence au 31 décembre 1924. ¹ ⁰ Approximativement. ¹¹ Estimation. On comptait 5,516 sections d'écoles rurales, 24 cités et 140 villes possédant des écoles séparées; 189 écoles primaires supérieures et 183 high schools et collegiate institutes. En supposant que ces cités, villes et villages constituent autant de sections sociaires, le nombre total de ces sections atteindrait 6,326. ¹ ¹ A l'exclusion des billets promissoires. ¹ ¹ On pourrait déduire de ce total environ '83,500,000 dépensées pur les écoles privées, l'enseignement supérieur, etc. ¹ ¹ A l'exclusion de \$458,125 pour l'université provinciale. ¹ ¹ Les écoles indépendantes subventionnées ont absorbé \$8,200,400. ¹ ¹ Y compris les sommes payées par le gouvernement en traitement des instituteurs des écoles générales et du collège Prince of Wales (\$256,829) et les suppléments fournis par les districts (\$87,053). ¹ A l'exclusion des traitements des instructeurs des écoles professionnelles et des collèges provinciaux.

2.—Detalled Summary of Educational Institutions in Canada by Provinces, for 1924 or latest year reported.

<sup>1</sup> Including Correspondence courses Technical Schools, (727): Short day Courses Technicals, (30): Short Courses Agricult. ral, (95): Evening Courses Technical and Coal Mining, (3,218).

<sup>2</sup> Excluding the Students mentioned in Note 1. The total registration of these colleges was 1,363.

<sup>3</sup> Calculated from the total attendance First Term 78.9 and the Average number days school was open (18.9). This gives a total days attendance during the year of 11,216,899.5 and an average number days school was open of 182.3 from which the average daily attendance is seen to be 58,179. The average daily attendance for each term seems to be obtained on a slightly different oasis from above. Including part time lecturers of whom 17 were specified as lecturers in law.

1 Y compris les cours par correspondance des écoles techniques 727, les cours abrégés des mêmes écoles 30, les cours abrégés d'agriculture 65, les cours du soir des écoles techniques et des mines 3, 218. \* A l'exclusion des étudiants figurant sous la note 1, cas collèges avaient 1,368 étudiants inscrits. \* Calculé sur le nombre total des journées de présence du premier semestre (4,730, 604-5), second semestre (6,486, 565), pendant le premier semestre les écoles sont restées couveries en moyenne durant 78 et jours et pendant le second semestre 113-9 jours, sort 193-9 jours sur l'année entière, lequel nombre, pris comme dividende du diviseur 11, 216, 899-5, nombre des jourses de présence à l'école, donne une moyenne de fréquentation quotidienne de 58, 179 élèves, la moyenne quotidienne pour chaque semestre semblant différer quelque pour. \* Y compris quelques conférenciers, dont 17 à la faculté de droit.

2.—Betailed Summary of Educational Institutions in Canada by Provinces, for 1924 or latest year reported—Continued 2.—Résumé défaillé des institutions enseignantes du Canada par provinces, chiffres de 1924 ou du dernier rapport—suite

1 Primary schools including Protestant High Schools, 1923. The High School enrolment is not filled out because it would not be complete without including the High School pupils of the Classical Schools and of the Normal Schools. → The figures by sex represent High Schools and Collegiate Institutes only, the totals include pupils in fifth classes. → Includes Walkerville. → Includes Waterloo. → The school figures for Charlottetown include P.W. C. which is a provincial institution and not merely a City School. However, the objection to including the H. S. pupils of this institution with the general enrolment of the city applies to other cities as well smoe the H.S. of practically all cities enroll non-resident pupils from rural districts and other urban centres. — € Includes the Institute of Technology and Art which is a provincial institution.

1Ecoles primaires.—Y compris"High Schools" protestants, en 1923. Leschiffree concernant les High Schools ont été laissée en blanc, parce qu'il eussent été incomplets: en effet, ils auraient haissé de écète les éléves des chiefs es éléves des chiefs en été les éléves de soit en les en été plant de chaque eaxe ne s'appliquent qu'anx élèves éles élèves de cinquième classe—\*\* Comprend Waterboi—\*\* Les écoles de Charlottetown embrassent les élèves de cinquième classe—\*\* Comprend Waterboi—\*\* Les écoles de Charlottetown embrassent les élèves de cinquième classe—\*\* Comprend Waterboi—\*\* Les écoles de Charlottetown embrassent les élèves du collège Prince of Waterboi—\*\* Les écoles de Charlottetown embrassent les élèves du collège Prince of Waterboi—\*\* l'acquiquit l'activition provinciale. Toutefois, l'objection qu'on pourrait soulever contre l'inclusion des élèves de cette institution dans les degrée de High Schools de preseque écoliers de cette enté, s'appliquenzia taussi blen à toures les autres cités, parce que les Illigh Schools de preseque toutes les cités reçoivent comme élèves des enfants de districte rueux ou d'autres agglomérations ubaines—\*\* vompris Ilnstitut de Technologie et d'Arks, qui est une institution provinciale.

4.—Number and proportion per cent of the population 5-24 years of age reported at school for some period by sex and single years of age, by provinces, 1921

4.—Nombre absolu et pourcentage de la population de 5 à 24 ans, ayant fréquenté l'école plus ou moins longtemps par sexe, par âge et par provinces en 1921

(Indians excluded-Ne comprend pas les Indiens)

# 10.—Percentage of the Population of Canada 5-17 Years of Age attending School in 1911 and 1921.

The chart opposite is intended to illustrate the progress made in school attendance between 1911 and 1921. This progress is discussed in the introductory chapter, while Tables 4 to 7 will enable persons interested in the subject to make their own analyses. Attention is here called to the special manifestations of progress in this respect shown by certain provinces.

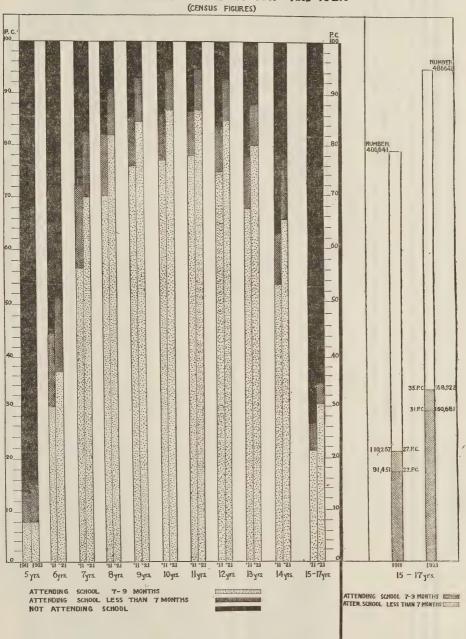

In the first part of the chart the black shows the proportion at each age not attending school; the cross hatched, the proportion attending school less than 7 morths or what might be considered an inadequate period, while the dotted shows the proportion attending 7 to 9 months, or what might be considered an adequate year. A distinction should be drawn between: (1) the ages 5 and 6; (2) the ages 7 to 14 or the usual compulsory age period; and (3) the ages 15 to 17 which are post compulsory or very partially compulsory age periods. During the ages 7 to 14 the length of the black columns, or rather the decrease in this length, is of special significance. If, for example, the black at the age of 12 is compared for 1911 and 1921 it will be noticed that an improvement is shown of a decrease from 17 p.c. out of school in 1911 to 7 in 1921, or nearly 60 p.c. Further, it will be noticed that there was a larger proportion at school at the age of 13 (that is, up to the age of 14), in 1921 then at any age in 1911. The black columns at the ages of 5 and 6 and 14 to 17 have not as much significance as the other two columns. At the ages of 5 and 6 it will be noticed that improvement is not marked. In fact the cross hatched portion, especially at the age of 5, bears a greater ratio to the dotted portion in 1921 than in 1911, thus showing that attendance was less regular in 1921; while the ages subsequent to 6 years, show a decided improvement in this respect. On this point the reader is referred to page 11 of the Annual Report for 1922 in which conclusions bearing on this point were based on other than census figures and before the census figures were known. In the case of the ages of 14 to 17 only the dotted and cross hatched columns are of much importance. The improvement at these ages is shown absolutely as well as relatively in the supplementary chart at the right. It should be noticed that an increase in nearly 60,000 at school at these ages is shown out of an increase in population of about 80,000. The age-grade tables

## 10.—Pourcentage de la population du Canada de 5 à 17 ans, fréquentant l'école en 1911 et 1921.

Le diagramme ci-contre constate les progrès réalisés par la fréquentation scolaire, entre 1911 et 1921. Ces progrès sont commentés dans le chapitre qui sert d'introduction; de plus, les tableaux 4 à 7 permettront aux éducateurs d'en tirer leurs propres conclusions. Nous appelons l'attention du lecteur sur la manifestation spéciale des améliorations survenues à cet égard dans certaines provinces.

Dans la première partie du diagramme, l'espace en Loir représente la proportion des enfants de chaque âge qui ne vont pas à l'école; la partie couverte de hachures représente la proportion de ceux fréquentant l'école de 7 à 9 mois, c'est-à-dire une année ordinaire. Il est nécessaire d'établir une distinction entre: (1) les âges de 5 à 6 ans; (2) les âges de 7 à 14 ans, période habituelle de l'école obligatoire et (3) les âges de 15 à 17 ans, où l'école n'est plus obligatoire, ou ne l'est que relativement. Le rétrécissement des colonnes noires, représentants les enfants de 7 à 14 ans, a une signification toute spéciale. Si, par exemple, on compare cette colonne noire, représentant les enfants de 12 ans en 1911 et 1921, on remarque une amélioration notable de la situation, puisque en 1911, 17 p.c. des enfants ne fréquentaient pas l'école, tandis qu'en 1921, il n'y en avait plus que 7 p.c., soit un gain de 60 p.c. En outre, on peut voir qu'en 1921, les enfants de 13 à 14 ans étaient à l'école en plus grand nombre qu'à tous autres âges en 1911. Les colonnes noires consacrées aux âges de 5 et 6 ans l'amélioration est peu sensible. A cet égard nous renvoyons le lecteur à la page 11 du rapport annuel de 1922, où des conclusions sur ce sujet sont basées sur des chiffres autres que ceux du recensement, les données du recensement étant alors inconnues. En ce qui concerne les enfants de 14 à 17 ans, la colonne portant des hachures et la colonne pointillée ont seules une réelle importance. L'amélioration que l'on constate à ces âges est analysée, tant d'une manière absolue que d'une manière relative, dans le diagramme supplémentaire de droite. Il convient de faire ressortir qu'une augmentation de population d'environ 80,000 âmes a pour corollaire un accroissement de près de 60,000 écoliers de ces âges. Les tableaux consacrés à la répartition des écoliers par âges et par degrés, que l'on trouvera dans les chapitres 2, 3 et 4, démontrent que les enfants de 14 à 17 ans sont normalement des élèves de "high schools" et que l'au

<sup>&</sup>quot;5 years" include "under 5" where the latter are not shown.

<sup>1</sup> Not including vocational or night schools.

Note.—The differences between the totals in the above table and those of Table 11 are due to unclassified pupils. The same institutions are represented in both tables except that the Classical Colleges are included in the above table. One reason for unclassified pupils is that the classification was in some cases made some time before the end of the year, so that pupils enrolled after this time were not classified. The other reason is that the returns of some teachers gave only the total number of pupils. The value of the figures as given is based on the assumption that the distribution of the unclassified was the same as of the classified in the same kind of institution at the same time.

12.-Ages of pupils enrolled in Schools in Seven Provinces in Canada, 1924 or latest year reported 12.—Âge de la population scoiaire dans sept provinces du Canada, chiffres de 1924 ou du dernier rapport

A défaut d'indication contraire, les enfants de moins de 5 ans figurent avec ceux de cinq ans.

<sup>&</sup>lt;sup>1</sup> A l'exclusion des écoles professionnelles ou du soir.

Nora.—Les différences que l'on remarque entre les totaux du tableau ci-dessus et ceux du tableau 11 sont dues aux élèves non classifiés. Ces deux tableaux embrassent les mêmes institutions, mais les collèges classiques sont ajoutés au tableau ci-dessus. Si certains élèves ne sont pas classifiés, cela tient à ce que parfois la classification fut opérée un peu avant la fin de l'année, de telle sorte que les élèves entrés postérieurement n'y figurent pas. Une autre raison, c'est que quelques instituteurs se sont bornés à donner le total de leurs élèves, omettant les détails. Les chiffres du tableau ci-dessus sont basés sur la présomption que les élèves non classifiés se répartissent dans la même proportion que les élèves classifiés, dans le même genre d'institutions et au même moment.

13.—State Controlled and Private Schools in Canada: Distribution of 1,364,040 Pupils by Age and Grade, 1924
13.—Écoles sous le contrôle administratif et privées au Canada: Répartition de 1,364,040 élèves par âge et par degré, en 1924.

### 5.—SECONDARY EDUCATION

Secondary education, as distinguished from primary education is in all provinces of Canada. except in the Catholic school system of Quebec, a somewhat misleading term. In Quebec Catholic schools secondary education has a definite meaning, and refers to a system of education extending from an early age to the completion of a full course in Arts. Thus in the classical colleges, the secondary institutions for Young Ladies and certain other independent secondary schools the courses often extend over 8 years and correspond more or less roughly to the entrance work, 3 years of high schools work and four years of University Arts work in the other provinces. The academic training of teachers for primary schools, on the other hand, is done at the primary schools and normal schools. The class of academic work done in these includes "secondary" work as understood in the other provinces, but is not so called. In the new course of studies this work is known as "primary complementary." The usage here is not radically different from that in the other provinces where we find "Teachers' (academic) Courses", and "Matriculation Courses" in the high schools. Indeed in Manitoba secondary schools, until very recently, there were found a "University Course" designed purely for prospective university students, and a "Teachers' Course" designed purely for prospective teachers. A link connecting these two was introduced at a later date and was known as the "Combined Course". In Quebec this "University Course" would be known as secondary work, while "teachers' course" would now be "primary complementary"; in other words primary school continuation. In all provinces this is what secondary education really is, for there is no set of secondary schools from which pupils trained elsewhere are excluded, provided that they have attained to the standard required. This standard may be acquired even in rural one room schools provided the teachers are qualified to teach the work. The departmental examinations held near the beginning of July in all provinces, as well as the course of study prescribed by the department, standardize the work for each province. For example, a pupil trained in a one-room rural school in Nova Scotia might write the departmental examinations for Grade XI (including university matriculation) on the same subjects and side by side with a pupil trained in one of the largest academies; and if the former pupil passed the grade as well as the latter he would be equally admitted to Grade XII in that Academy or to the first year in Arts in a University. The same applies to all other provinces although in many provinces high school work in rural schools may not be carried further than Grade IX or X.

The different kinds of institutions in which high school work is done in the different provinces may be seen in the following table. The comparative number of pupils in each kind will indicate

the proportion of the high school work of the province it carries.

### 5.—ENSEIGNEMENT SECONDAIRE

En employant l'expression "enseignement secondaire", dans toutes les provinces du Canada, sauf Québec, on se sert d'un terme inexact et susceptible d'être mal interprété. Dans les écoles catholiques de Québec, l'enseignement secondaire est parfaitement défini; on désigne ainsi une succession d'études commençant à l'âge le plus tendre et se terminant à l'achèvement du cours de philosophie (arts). Ainsi, dans les collèges classiques, les pensionnats de jeunes filles et certaines autres institutions de cet ordre, indépendantes, souvent le programme s'étend au delà de huit ans et correspond à peu près à trois années du programme des "high schools" et quatre années des études universitaires à la faculté des Lettres dans les autres provinces. D'autre part, les instituteurs destinés à enseigner dans les écoles primaires, reçoivent leur formation d'abord aux écoles primaires, puis aux écoles normales. Les études de nature académique qu'ils y font embrassent ce que l'on appelle dans les autres provinces, le programme "secondaire", quoiqu'il n'en porte pas le nom. Dans les nouveaux programmes, ces études sont connues sous le nom de "primaires complémentaires". L'usage ici suivi ne diffère pas radicalement de celui des autres provinces, où nous trouvons dans les "high schools" des cours académiques pour instituteurs et des cours de En fait, dans les institutions d'enseignement secondaire du Manitoba, il existait matriculation. encore tout récemment un "cours universitaire" à l'usage exclusif des jeunes gens se destinant à l'université et un cours d'instituteurs, à l'usage exclusif des candidats à l'enseignement. Plus tard, on introduisit un troisième cours, destiné à combiner les deux précédents, lequel por ta le nom de "cours intermédiaire". Dans Québec, ce cours universitaire entrerait dans le cadre de l'enseignement secondaire, tandis que les cours à l'usage des instituteurs seraient des cours "primaires supplémentaires", ou, en d'autres termes, le prolongement de l'école primaire. Dans toutes les provinces, c'est ce qu'est réellement l'enseignement secondaire, car il n'y e xiste pas d'écoles secondaires d'où soient exclus les élèves instruits ailleurs, s'ils possèdent les connaissances requises. Ces connaissances peuvent être acquises dans les écoles rurales à classe unique, pourvu que les instituteurs soient en mesure de les enseigner. Les examens obligatoires qui ont lieu au commencement de juillet dans toutes les provinces, ainsi que le programme d'études dressé par le ministère, établissent le niveau de ces connaissances dans toutes les provinces. Par exemple, un écolier sortant d'une école rurale à classe unique de la Nouvelle-Ecosse peut subir les examens officiels pour le degré XI (y compris la matriculation universitaire), sur les mêmes sujets et côte à côte avec un élève inscrit dans l'une de nos meilleures académies; et si ces deux candidats passaient l'examen avec succès, ils seraient, l'un et l'autre, admis au degré XII de cette académie ou en première année de la faculté des Lettres dans une université. Et ce que nous venons de dire s'applique à toutes les autres provinces, quoique dans plusieurs provinces, les écoles rurales ne peuvent pas préparer aux "high schools" plus loin que les degrés IX et X.

On verra dans le tableau suivant l'énumération des différentes institutions de chaque province, préparant à l'entrée dans les "high schools". Le nombre comparatif des élèves de ces diverses catégories d'écoles indiquera la proportion des matières de haute école qu'on y enseigne.

towns which had regular in this schools as separate in subtutions while a the undined repearable the separate of about 43 high school purples to a school. Of these pupils had less than 30 high school grade school pupils to a school. Of these pupils shools and the schools had less than 30 high school pupils, that is only this number of the 65 schools had fewer secondary pupils than would necessitate the full time of a teacher. This agroup would probably have a grade VIII class t ught with the high school grade, as the argroup would probably have a grade VIII class t ught with the high school grade, as the 11 had only an average of 3.5 rooms with 15 high school pupils and 115 total pupils to a school; 13 had from 40 to 30 high school pupils with an average of 6.3 rooms, 51 total pupils and 30 high school pupils to a school; 17 had 60 to 90 high school pupils with an average of 6.3 rooms, 51 total pupils and 30 high school pupils to a school; 17 had 60 to 90 high school pupils with an average of 8 rooms, 37 total pupils and 72 high school pupils to a school; while two schools did not report the number of rooms. The high school pupils to a school; while the schools did not report the number of rooms. The high school work in these schools will be two schools will be a school; while the schools did not report the number of rooms. The high school work in these schools will be had a school; while did not report the number of rooms. The high school work in these schools will be high schools——I Jul3 in grades IX and X were unclassified by grade—— Infinity is special quilly a grades IX and X were unclassified by grade—— unfinity in the schools.——I had instruction—— dependent and rural schools griving high school instruction—— dependent with the schools.——I the schools and rural schools griving high schools——I the schools and rural schools griving high school instruction— are of metude standers in the rour years in Arts as well as puglis in the Lib. gradues. Both are classed as secondary pupils, the term having a different significance in Catholic Education to the province of Quebec from its accepted significance by other provinces.—The 6,054 refers to pupils in the Than 38 th years of the primary schools, which are equivalent at least to grade at IX and X and perhaps might be extended to grade XI. The same applies to the figures under IX and X and perhaps might be extended to grade XI. The same applies of the Normal Schools. In addition to these figures should be included the pupils of the Normal Schools to the number of 1,555 in 1923. These carry on academic as well as professional work; their academic work seems to run parallel with the work in the Academics and what H. S. son work is being done in Model Schools. Presumably the candidates for teachers certificate by the Board of Examiners have received their higher academic training in the Academics and what H. S. son granted by the Board of Examiners have received their higher academic training in the Academic and the Academics and what H. S. son their bigher academic training in the Normal School work in Town Schools (over and above the High School work in Town Schools (over and above the High School work in Town Schools (over and above the High School work in Town Schools (over and above the High Schools in Sastonian as genine secondary class rooms of the kind known in one province as "bure high echols and the schools was proving and upon the sole reason that they have not yet been formics and estatus and do not as yet come under high schools administration, but in function they are secondary schools. This can be seen from the following figures. In 1923, the 65 schools in set the secondary schools are regularly as the regular high schools administration, but in function they are schools was S7 with 517 students. The Sa and the secondary schools are regularly and contains a spended in the number of their departments or clas —Rural Schools here refer to one-room schools. The policy of the Department has been to menourage this rural high school work when the teacher is qualified to undertake it. One rural school extended the work even as far as grade XII. 136 as far as grade XII. 404 as far as grade X only, and 435 as far as grade IX only.—The number of classrooms in the case of both grammar, superior and other schools include sonly such classrooms as are doing High School work. The teachers, enrollment etc., refer only to these class rooms.—The 9.225 and 557 include students in the four years in Arts as well as pupils in the H.S. grades. Both versity students.—<sup>2</sup>As will be seen from the figures, the secondary classes included only such as devote at least half time to work of Secondary grade.—<sup>3</sup>The Institutions mentioned above include only such classes of graded schools or one roomed schools as take up work of Secondary grades. From table 2 it will be seen that the total number of graded Schools was 56 with 196 classes. There were 416 one-room schools, so that 284 out of the 612 class rooms in P.E.I., were doing work of secondary grades, over and above the work done in Prince of Wales College. and 14 in rural districts besides 53 superior and rural schools giving high school instruction. 12 Including 246 not classified by sex.—<sup>18</sup> Including 199 unclassified by grades. 9718-4

Can. History. For other forms of History, see Tables 69 and 70.
British History only. For the numbers taking other forms of History, see Table 75.
Including only Ancient History given in all grades but (X) and Canadian History and civics in Grade X, see Table 76.

<sup>4</sup> Includes only woodwork, for other forms of Manual Training, see Table 72. <sup>5</sup> Including Continuation, High Schools, Collegiate Institutes and Day Vocational, full time pupils.

General Note:—The number taking the above listed subjects include all pupils of secondary grade in N.S. Secondary pupils enrolled during the second term in N.B.; pupils in secondary Schools only (not including secondary pupils in other than secondary schools) in Ontario, Saskatchewan, Alberta and British Columbia. The totals given at the foot of the table show the total enrolment in the schools presented. The number of secondary pupils not represented may be found by substracting the above totals from the totals in H.S. Grades given in Table 63.

 Histoire du Canada; pour les autres formes de l'histoire voir tableaux 69 et 70.
 Histoire de la Grande-Bretagne seulement. Quant aux élèves étudiant l'histoire sous d'autres formes voir le tableau 75.

Histoire ancienne seulement, enseignée dans tous les degrés, sauf le degré X et l'Histoire du Canada et des devoirs civiques dans le degré X. Voir tableau 76.
Menuiserie seulement; pour les autres travaux manuels voir tableau 72.
Y compris les élèves réguliers des écoles primaires supérieures des "high schools", des instituts collégiaux et des écoles

professionnelles

Nota:—Les élèves étudiant les matières ci-dessus énumérées embrassent tous les élèves de l'enseignement secondaire en Nouvelle-Ecosse, tous les élèves de l'enseignement secondaire inscrits durant le second semestre au Nouveau-Brunswick et les élèves des écoles secondaires seulement (à l'exclusion de ceux qui reçoivent l'enseignement secondaire dans desécoles autres que des écoles secondaires), dans Ontario, la Saskatchewan, l'Alberta et la Colombie Britannique. Les totaux du bas du tableau indiquent la totalité des élèves inscrits aux écoles qui nous occupent. Le nombre des élèves de l'enseignement secondaire non représentés ici peut être obtenu en soustrayant les totaux ci-dessus destotaux desélèves de "high schools" donnés dans le tableau 63.

¹ The number conditioned in the H.S. Grades in Saskatchewan must not be understood as partial failures. By departmental regulations the great majority of candidates took only partial examinations so that the successful candidates at these partial examinations were necessarily conditioned in respect to the full grade. Moreover the 7,322 in grade VIII mentioned as being examined is obtained by adding those who passed and those who failed and substracting those promoted by schools. There is an assumption here that those who failed wrote the examinations.

¹ By departmental examinations.

¹ N.B. To the number excessful eatthe Departmental examinations.

3 N.B. To the number successful at the Departmental examinations must be added the number promoted by schools to obtain the full number of successful candidates.
4 Number failed in N.S. means those who failed to receive the grade for which they wrote; in N.B. it means those who failed to received any grade. The no. conditioned obtained grades lower than those for which they wrote.

 b ligures of 1923.
 The number thus promoted in B.C. was not reported but this is the regular mode of promotion from grades IX and X in High Schools. Departmental examinations in these grades are required only from Superior Schools and in appeal cases from pupils in High Schools.

<sup>1</sup> Les élèves admis conditionnellement dans la Saskatchewan ne doivent pas nécessairement être considérés comme ayant \*\* Les eleves admis conditionnement aux instructions du ministère, la grande majorité des candidats ne se présentèrent que pour une partie des matières, de telle sorte que, même s'ils réussissaient, leur admission n'avait qu'un caractère partiel. De plus, le nombre des 7,332 élèves du degré VIII, ayant subi l'examen est obtenu en additionnant les candidats admis et les candidats refusés, puis en soustrayant les élèves avancés sans examen. On présume ici que ceux qui n'ont pas changé de classe ont subi l'examen.

2. Franças officials <sup>2</sup> Examens officiels.

N.-B. Pour obtenir le nombre complet des candidats admis il faut additionner ceux ayant passé l'examen avec succès

avec ceux qui font l'objet d'une promotion sans examen.

En Nouvelle-Ecosse les élèves figurant dans la colonne des refusés sont ceux qui n'ont pas été admis au degré auquel
ils aspiraient, mais au Nouveau-Brunswick ce sont ceux dont l'échec fut absolu. Ceux admis conditionnellement ont obtenu des degrés inférieurs à ceux qu'ils postulaient.

5 Chiffres de 19 3. 6 Le nombre d'élèves avancés de C.-B. n'est pas donné, mais c'est la manière ordinaire d'avancer dans les degrés IX et X des hautes écoles. Les examins du ministère ne sont exigés que des élèves des écoles supérieures ou des élèves des hautes écoles se pourvoyant en appel.

Secondary Grades: Number of Pupils by Subjects of Study, 1911-1924-Degres secondaires: Nombre d'élères pour chaque matière, 1911-1924 66.—Nova Scoria—Nouvelle-Ecosse

1924-P.E.I., Inc. P.W.C. 719-1,113; N.B., approx. 1,363-2,074.

<sup>1</sup> Includes the pupils of Continuation Schools, H. S. and Collegiate Inst. only. In 1923-24 in all secondary grades reported there were 35,313 boys and 43,111 girls. These included day vocational, public, and separate schools. The figures in the tables are confined to continuation, H. S. and Collegiate Inst. for comparative purposes.

<sup>1</sup>Conprend seulement les élèves des écoles de continuation, des hautes écoles et des instituts collégiaux. En 1923-24 leur nombre était de 35,313 garçons et 43,111 filles. Cela comprend les écoles publiques séparées et d'apprentissage. Les chiffres de ce tableau se bornent aux hautes écoles et aux instituts collégiaux pour fins de comparaison.

<sup>1</sup> School Sections. Includes 80 sections without schools in operation. The number of rural school houses was 1,420. The number of class-rooms in operation was 1,418.

<sup>&</sup>lt;sup>1</sup> Sections scolaires. Comprend 80 sections sans école ouverte. Il existait 1,420 maisons d'école rurales et 1,418 salles de classe ouvertes

<sup>2</sup> Second term only-22ème semestre seulement.

<sup>&</sup>lt;sup>3</sup> Second term only—22ème semestre seulement.

<sup>3</sup> Of the pupils in Urban Schools in Ontario the continuation Schools had 9,337 pupils enrolled and 7,853 in average attendance. Of these pupils 5,132 were children of farmers, while 11,9 3 of the pupils in Collegiate Institutes and High Schools and 432 full time day Vocational pupils were children of farmers. The continuation schools are situated in villages and may be considered as organized primarily for the purpose of placing secondary education within the reach of rural communities; again a large number of the children of agriculturists in Collegiate Inst. and High Schools are probably from adjoining rural communities and not necessarily boarding away from home in the towns and cities where these institutions are situated. The same may be said of the pupils in public and separate village schools, and, to some extent, in High Schools in cities. The number of pupils in these village Schools are 25,300 and in town Schools 99,891. The proportion of rural children who must be attending urban centers may be estimated from the census figures of 1921 taken in conjunction with the report of the Dept. of Education for the same year. According to the census figures, of all persons attending any schools, 42 p.c. were from rural communities. According to the report of the Dept. of Education for the same year, of all persons attending, 36 p.c. were in attendance at rural schools. Roughly therefore 6 out of 42 or over 14 p.c., of the rural pupils were in attendance in urban schools. There were also in the neighbourhood of 600 graded schools in rural centers.

<sup>3</sup> Dans les écoles urbaines de l'Ontario, les écoles de continuation ont 9,337 inscriptions avec une fréquentation moyenne

ance in urban schools. There were also in the neighbourhood of 600 graded schools in rural centers.

Bans les écoles urbaines de l'Ontario, les écoles de continuation ont 9,337 inscriptions avec une fréquentation moyenne de 7,853. De ces élèves, 5,132 étaient fils ou filles de cultivateurs, tandis que 11,913 élèves des instituts collégiaux et des hautes écoles et 432 élèves du jour dans les écoles de travaux manuels étaient aussi fils ou filles de cultivateurs. Les écoles de continuation sont dans les villages et on to pour objet essentiel de mettre l'enseignement secondaire à la portée des communautés rurales. Un grand nombre des élèves des instituts collégiaux et des hautes écoles viennent probablement des districts ruraux voisins et ne sont pas nécessairement des pensionnaires dans les villes ou les villages où se trouvent les écoles. Il en est de même des écoles publiques ou séparées des villages et même des villes, et jusqu'à un certain point, dans les hautes écoles des villes. Le nombre d'élèves dans les écoles de village était de 25,300, et dans les écoles de villes, de 99,891. La proportion d'élèves des districts ruraux fréquentant les écoles urbaines doit être déterminée d'après le recensement de 1921 comparé avec le rapport du ministère de l'Instruction Publique de la même année. D'après le recensement de la population Publique, 36 p.c. de tous les élèves se trouvaient dans les écoles rurales. Or, 6 sur 42 donne un pea plus de 14 p.c. d'élèves des districts ruraux fréquents les écoles urbaines. Il y avait aussi environ 600 écoles à classes multiples dans les centres ruraux. ruraux.

91.—School attendance of the rural and urban population 5 to 19 years of age by single years classified by months at school, 1921—(Indians excluded)

91.—Présence à l'école de la population rurale et urbaine de 5 à 19 ans, à chaque âge, classifiée par durée de fréquentation en 1921—(Indiens exceptés)

¹ Including part-time. ² In addition to these, 8,415 were examined later in the School year but the results of the examinations were not given above. ³ In addition and at a later date 912 were recommended but the number of these treated is not given. ⁴ Medical Inspection in the schools of N.B. is under the control of the Dept. of Health and under the immediate supervision of the chief medical officer of that Dept. ⁵ 2 whole, 6 part time. ⁶ 1 being appointed. ⁻ ⁴ regular, 5 travelling. ⁶ That is, normal. ⁰ No accurate figures as yet but some thousand by clinics and private practitioners. ¹⁰ The figures for Ontario refer only to work done directly by the Dept. of Education and do not include the work done in the municipalities carrying on the service throughout the province. For supplementary information see next table. ¹¹¹ I full time, ³ apart time medical practitioners and 2 part-time occllists. ¹¹² I full time chief inspector and 6 part-time assistants. ¹³ Including 2 medical and 2 dental clerks. ¹¹⁴ Gentres for dental clinics under control of Board; eye clinics at 2 of the city hospitals 3 times a week. ¹¹⁵ By Medical Inspectors. In addition there were 132,126 examinations by nurses. The number of different individuals thus examined is not given. The number of pupils in the city was 40,627. ¹⁶ As result of Medical Inspections not Nurse. There were also 5,580 pupils found defected in 1923 and re-examined in 1924. ¹¹ Part-time. ¹³ Travelling clinics. ¹⁰ In addition 264 were examined by travelling surgeons, 338 by travelling dentists. This service was voluntary and not under the jurisdiction of the Government.

¹ Y compris bénévoles. ² En outre, 8,415 écoliers furent examinés au cours de l'année scolaire, mais postérieurement; le résultat de cet examen n'est pas indiqué ci-clessus ³ En outre, 912 écoliers furent postérieurement recommandés pour traitement, mais on ignore le nombre de ceux ayant été traités. ⁴ Dans les écoles du Nouveau-Brunswick l'inspection médicale est sous la juridiction du Département de l'Hygiène et sous la surveillance immédiate du directeur-général de ce département. ⁵ 2 v consacrent la totalité de leur temps et 6 une parties seulement. ⁵ 1 a été nommé. ¹ 4 régulières, 5 ambulantes. ⁵ C'est-à-dire normaux. ⁵ On ne possède pas de chiffres exacts mais l'on estime que plusieurs milliers d'enfants sont traités dans les cliniques et par les médecins dans leurs familles. ¹ Les chiffres d'Ontario s'appliquent exclusivement aux travaux accomplis par le ministère de l'Instruction publique, mais non aux œuvres des municipalités. Pour informations supplémentaires voir le tableau suivant. ¹¹ 1 médecin attitré, 3 bénévoles et 2 oculistes bénévoles. ¹² V compris 2 étudiants en médecine et deux étud ants dentistes. ¹⁴ 6 centres de cliniques dentaires sous le contrôle de la Commission; cliniques oculaires 3 fois par semaine à deux des hôpitaux de la cité. ¹¹ Par les médecines-inspecteurs; en outre, 132,126 examens par les infirmières. On ne connait pas le nombre des différents individus ainsi examinés. Dans la cité il y avait 40,627 écoliers. ¹⁵ A la suite des inspections médicales seulement. De plus, 5,580 élèves jugés défectueux en 1923 furent réxaminés en 1924. ¹¹ Bénévoles. ¹³ Cliniques ambulants. Ĉe service était purement bénévole.

¹ The 5 auxiliary classes for mentally subnormals with 96 pupils are situated in Halifax. There are 4 provincial institutions under the superintendent of neglected and delinquent children with at least 10 classes, and an enrolment of 421 pupils who might be subdivided as follows: criminal delinquents 142, truants 87, unclassified 201. Those unclassified are probably waifs. In addition to those specified in the table there are probably a considerable number of other classes throughout the province in connection with publicly controlled schools. Also in addition should be mentioned 1 institution at Truro, The Maritime Home for girls, which has 3 classes and 91 pupils who were classified as follows: physically defective 4; retarded but not mentally defective 40; mentally subnormal 15; delinquents 25. The remainder are presumably normal. School children recommended for special institutions or classes as a result of inspection during year were classed as follows: defective in sight 303; in hearing 198; generally 175. Some of them at least are accommodated in institutions or classes in other parts of the province. With references to the supernormal the reader is referred to the age grades tables of 8 provinces, and especially to table 16. While no conclusions as to subnormals are warrantable from these tables owing to such factors as lateness in beginning school, irregular attendance, changing residences, foreign birth and want of opportunity generally, it is not unreasonable to suppose that certain conclusions are warrantable about supernormality and that children 3 or more grades in advance of their age may be considered supernormal. Defects in such conclusions arise from the fact that the full number of supernormals cannot be thus ascertained since lack of facilities for promotion and of opportunity in general may cause such children to be in grades lower than they could have reached if their mentality had been allowed free play.

<sup>2</sup> The auxiliary classes specified in the table may be subdivideed as follows: 97 t

<sup>2</sup> The auxiliary classes specified in the table may be subdivideed as follows: 97 training and vocational classs; 8 open I he auxiliary classes specified in the table may be subdivided as follows: If training and vocational classes; 8 open ar and forest schools; 3 myopia; 2 lip-reading; 8 hospital, sanitorium or institutional; 5 ambulance. The cities and towns where others are established are Belleville, Brockville, Guelph, Hamilton, Kitchener, London, Midland, Owen Sound, Ottawa, Oshawa, Peterboro, Stratford, St. Catharines, Walkerville, Welland, Windsor and York County. To York County belongs the distinction of having established the first rural auxiliary class in Ontario. The above numbers refer only to institutions and classes receiving special Grants from the Government. There are in Ontario 4 schools and perhaps others where all the children are graded on a mental basis and special procedure is followed in cases of supernormal children. There are also throughout the province a number of Private Schools for abnormal children.

<sup>a</sup> All the mentally defective children for the province of Saskatchewan are in an institution at Weyburn, which had in 1923 about 180 inmates. Of this number the 45 included in the table above are those who are capable of being taught, that is, those who grade up to a mental age of 43 and 5 years. The admissions during 1923 and 1924 were very much less than previously; moreover these admissions included a higher percentage than formerly of the better class of imbeciles. About 60 p.c. of the admissions of 1924 would be in this class. The 9 delinquents were girls.

General Note—The information on special classes in the five provinces specified in the table was supplied directly by the Departments of Education of these provinces for the year mentioned. Information regarding the other provinces is not directly available. In New Brunswick the Government sent six teachers to summer school at Harvard in 1923 and several classes have since been established, in St. John. In Quebec there is a number of special private classes of which may be mentioned one for crippled children and one for epileptics carried on at one of the hospitals. In Manitoba, Saskatchewan and Alberta, provisions for the blind and deaf may be seen in table 99, the institution for the deaf in Winnipeg being used in common, while the institution at Brantford, Ontario was used for the blind. There is now an institution for the blind at Winnipeg. In British Columbia besides the institutions for the blind and deaf there are 20 special classes in Vancouver alone. in Vancouver alone.

¹ Les 5 classes auxiliaires composées de 96 élèves dont l'intelligence est inférieure à la normale sont situées à Halifax. Il existe 4 institutions provinciales d'au moins 10 classes sous le surintendant des enfants abandonnés et des jeunes délinquants, qui contiement 431 élèves, lesquels peuvent être subdivisés comme il suit; jeunes délinquants 143; fâneurs 87; non classifiés 204. Ces non classifiés sont probablement des enfants trouvés. Outre celles spécifiées dans le tableau, il y a vraisemblablement un nombre considérable d'autres classes par toute la province sous le contrôle des écoles publiques. Il faut de plus mentionner l'institution de Truro, refuge des provinces maritimes pour les filles, composée de 3 classes et 91 élèves qui sont classifiées ainsi: difformités physiques 4; retardataires, mais d'intelligence normale 40; intelligence au-dessous de la normale 15; délinquantes 25. On présume que le surplus se compose d'élèves normaux. Les élèves recommandés après l'inspection médicale, pour des classes ou institutions spéciales ont été classifiée comme il suit: affections de la vue 303; de l'oure régions de la province. En ce qui concerne les intelligences au-dessous de la normale, le lecteur pourra se renseigner dans les tableaux des âges et des degrés de 7 provinces particulièrement dans le tableau 16. Bien que l'examen de ces tableaux des sous-normaux ne puisse nous fournir de preuves concluantes en raison de certains facteurs tels que: tardiveté du début, assistance irrégulière, changement de résidence, naissance à l'étranger et autres circonstances défavorables il n'est pas déraisonable d'admettre l'exactitude de certaines conclusions quant à cette classe d'enfants, par exemple que ceux qui sont de 3 degrés ou plus en avant des enfants de leur âge sont doués d'une intelligence supérieure. Certaines erreurs dans ces conclusions peuvent surgir du fait que le nombre complet des supernormaux ne peut être précisé puisque certains d'entre eux méritant des promotions, faute de circonstance favorable sont 1 Les 5 classes auxiliaires composées de 96 élèves dont l'intelligence est inférieure à la normale sont situées à Halifax. Il

<sup>2</sup> Les classes auxiliaires mentionnées dans le tableau peuvent être ainsi subdivisées: travaux manuels 97; écoles en plein air et forestière 5; myopie 3; lecture par les lèvres 2; hôpital, sanatoria, etc., 8.

#### 109.—PUBLICLY CONTROLLED SCHOOLS IN CANADA:

Classification of Teachers in the different provinces and the conditions upon which each class of certificate is awarded.
